MRS. DELIA GIROT.....	Nurse, No. 4 Building.
MISS ANNA BURFEIND.....	Cook, No. 4 Building.
MRS. MARTHA BEALL.....	Night Nurse, No. 4 Building.

HEALTH OFFICER'S REPORT.

FOR THE

FISCAL YEAR ENDING JUNE 30, 1898.

SAN FRANCISCO, July 1st, 1898.

TO THE HONORABLE, THE BOARD OF HEALTH
OF THE CITY AND COUNTY OF SAN FRANCISCO—

GENTLEMEN: I have the honor to submit the following report of the Health Department of this City and County for the fiscal year ending June 30th, 1898, and beg leave to call especially to your consideration the improvements which have been made therein during that period, foremost amongst which is the inauguration of the Bureau of Statistics.

During the whole history of this Department it seems that there has been a laxity in regard to the compilation of proper data for formation of correct tabulated statements pertaining to the classification of disease, the scientific nomenclature of death causes and the designation of localities prolific in contagious and infectious diseases, leaving it absolutely impossible to permit of correct comparison through previous years.

After a vast amount of work on the part of the members of this Board, assisted by the untiring efforts of our Statistician, we feel that we can now present to you, and through you the public, in this report all that we have hitherto lacked on this subject.

The first step undertaken was that of establishing a classified list of causes of death. In order that this might be satisfactory, we requested the co-operation of physicians and surgeons of this city to aid us in securing the desired

uniformity in classification. Appended hereto is a copy of the folder distributed throughout the city, and while it may not be entirely free from fault, I feel assured that all fair-minded medical men will agree with us that it is certainly a step in the right direction and a vast improvement over the old system.

CLASSIFIED LIST OF CAUSES OF DEATH ADOPTED BY THE SAN FRANCISCO HEALTH DEPARTMENT, AND SUGGESTIONS CONCERNING THE PHYSICIAN'S CERTIFICATE OF THE CAUSE OF DEATH, APPROVED JUNE 15, 1898.

CONCERNING THE PHYSICIAN'S CERTIFICATE OF CAUSE OF DEATH.

In order to secure an approximate uniformity of classification and nomenclature in the Certificate of the Cause of Death, and to increase the value and comprehensiveness of the vital and mortuary statistics of this City and County, the following Classified List of Causes of Death has been prepared and is now furnished for the information and guidance of the medical practitioner.

This list is based substantially upon the "Provisional Classification and Nomenclature" of the Royal College of Physicians of London, Eng., endorsed by the American Medical Association and the American Public Health Association, and adopted by the Government Medical Services of the United States and Great Britain.

All causes of death are grouped under three classes, as in the "Provisional Nomenclature":

"A"—Deaths from General Diseases.

"B"—Deaths from Local Diseases.

"C"—Deaths from Violence, Misadventure or Negligence.

The certifying physician is concerned only with classes "A" and "B"—Class "C" must be referred to the Coroner, who alone can issue or approve the Certificate of Death.

Previous to the adoption of this Classification and Nomenclature, an obsolete and unsatisfactory system of alphabetical classification has been in use, which has rendered the statistics of the Health Department of but little value to physicians or others interested. The apparent lack of care or attention on the part of physicians when certifying to the cause of death, is evident in many of the Certificates of Death on file in this office. Certain physicians have adopted the habit of assigning, as the cause of death, some prominent symptom of the disease from which the deceased may have suffered. This practice is not only careless and unscientific, but frequently mislead-

ing, and seriously interferes with any attempt at an accurate compilation of statistics.

The following items, taken from certificates on file in the Health Office, are cited in substantiation of the foregoing assertion: Anasarca, Ascites, Albuminuria, Hematemesis, Hemoptysis, Jaundice, Pulmonary Edema, Uremia, Weakness. These are terms of symptoms or complications only, and whenever placed upon the Certificate of Death should be invariably accompanied by the *chief* and *determining* causes with which they may be associated.

For the purpose of preventing in future the frequency of error which has characterized the past, this Department has adopted a new form of Certificate of Death, to which the attention of the physician is particularly directed. This certificate provides space for both the *chief* and *determining* and also the *contributing* and *consecutive* causes of death, together with the duration of each. It will be admitted that, in a certain proportion of cases, the attending physician may be unable to determine with exactness the *chief* or *primary* cause of death. Whenever this occurs the fact should be mentioned on the certificate.

In settlement of life insurance, suits for damage, etc., the duration of the *chief* and *determining* cause of death is required to be stated, as well as the character and duration of the *contributing* and *consecutive* causes. Annoying delays and subsequent complications will frequently be avoided if these causes be fully and clearly stated in the Certificate of Death.

Certificates of Death bearing such terms as Bright's Disease, Kidney Disease, Heart Disease, Brain Disease, Liver Complaint, Debility, etc., will positively not be accepted, but will be referred back to the certifying physician for correction and specialization.

The indefinite and indiscriminate use of the terms Cancer and Tuberculosis, without specifying the organ or organs involved, will be considered sufficient cause for the rejection of the certificate. The records of the Health Office for past years show that in many instances no care whatever has been exercised by the physicians in establishing the location of the organs or parts affected by these two diseases.

It is earnestly requested that wherever possible, proper differentiation be made between Sarcoma and Carcinoma.

Complex terms, such as Typho-malarial fever and Typhoid-pneumonia, have not been given space in this list, as the tendency of modern authorities is toward eliminating them from medical nomenclature. It will be preferable to use single terms, crediting the death to the disease indicated by the major symptoms which have manifested themselves during illness.

The issuance of this scheme of nomenclature must not be construed as being intended to limit the physician in his use of

diagnostic terms to such as appear in the printed tables. Regularly recognized synonyms or equivalents will be accepted without hesitation. However, the Health Department trusts that an attempt will be made on the part of the practitioner to conform, wherever possible, to the plan elaborated in this circular, and at the same time to avoid applying to diseases names which are antique and obsolete.

When death follows a surgical operation, the *disease, injury or condition* which necessitated the operation should always be stated.

Physicians will understand that the Health Department does not claim this classification to be entirely free from fault, but it marks the establishment of a system which, if followed, will render the statistical reports emanating from this office reasonably accurate and intelligible, and the co-operation of the entire medical profession to this end is invited.

CLASSIFIED LIST OF CAUSES OF DEATH

Adopted by the Health Department of San Francisco, as Warrant for the Issue of Permit of Burial.

CLASS "A"—GENERAL DISEASES

SPECIFIC FEBRILE (ZYMOTIC)

Cerebro-spinal meningitis
 Diphtheria (Includes Membranous Croup)
 Influenza (la Grippe)
 Malarial fevers
 Measles
 Parotitis (Mumps)
 Pertussis (Whooping Cough)
 Scarlet fever
 Smallpox
 Typhoid fever
 Varicella

DIARRHEAL

Cholera
 Cholera infantum
 Cholera morbus
 Diarrhea
 Diarrhea, infantile
 Dysentery

ZOÖGENOUS

Actinomycosis
 Anthrax
 Glanders
 Hydrophobia

VENEREAL

- Syphilis, acquired
- Syphilis, congenital

SEPTIC

- Erysipelas (State seat and cause)
 - Puerperal septicemia
 - Pyemia
 - Septicemia
 - Tetanus
 - Trismus neonatorum
- } (Cause must be stated in every instance)

PARASITIC

- Intestinal worms
- Thrush
- Trichinosis

DIETETIC

- Malnutrition
- Inanition
- Scurvy

CONSTITUTIONAL

- Anemia, Chlorosis (State cause)
- Carcinoma (Specify part affected, as of breast, liver, stomach, womb, etc.)
- Diabetes
- Gout
- Hemorrhagic diathesis, Hemophilia
- Leucocythemia
- Purpura hemorrhagica
- Rheumatism (State variety)
- Rickets
- Sarcoma (State part affected, as of breast, liver, etc.)
- Tuberculosis (Specify nature of, as Articular, Cerebral, Meningeal, Glandular, Miliary, Pulmonary, etc.)

DEVELOPMENTAL

- Atelectasis, congenital
- Cardiac malformation (Cyanosis)
- Icterus neonatorum
- Marasmus, infantile
- Marasmus, senile
- Premature and still births (State probable cause and fetal age)
- Senility (Accepted only if death is not assignable to definite disease)
- Spina bifida

CLASS "B"—LOCAL DISEASES

NERVOUS SYSTEM

Alcoholism

Apoplexy, cerebral

Brain (Specify disease, as Abscess, Congestion, Softening, Tumor, etc.)

Chorea

Convulsions, infantile

Cocainism

Eclampsia (*not puerperal*—State cause)

Encephalitis and Cerebritis

Epilepsy

Hydrocephalus

Insanity (State variety and mode of death)

Laryngismus stridulus

Locomotor ataxia

Meningitis, cerebral

Meningitis, spinal

Morphinism

Myelitis

Paralysis (State variety and cause)

Spinal cord (Specify disease of, as Sclerosis, Progressive muscular atrophy, etc.)

CIRCULATORY SYSTEM

Angina pectoris

Blood-vessels (State character of disease, as Arterio-sclerosis, Endarteritis, etc. Specify vessels involved, as Aneurism of aorta, Rupture of Varicose veins, etc.)

Embolism and Thrombosis (Specify vessel involved)

Heart (Specify disease of, as Endocarditis, Fatty Degeneration, Hypertrophy, Myocarditis, Pericarditis, Valvular disease of, etc.)

Senile gangrene

RESPIRATORY SYSTEM

Asthma

Bronchitis

Croup, catarrhal or inflammatory (Membranous Croup is to be returned as Diphtheria)

Hydrothorax

Laryngitis

Pharyngitis

Pseudo-diphtheria

Pleurisy (State variety, as acute, subacute, purulent [empyema], etc.)

Pneumonia (State variety)
 Pulmonary congestion
 Pulmonary hemorrhage (Cause must be stated)

DIGESTIVE SYSTEM

Appendicitis
 Enteritis
 Entero-colitis
 Gallstones (State complications or sequelae)
 Gastric hemorrhage (Cause must be stated)
 Gastric ulcer
 Gastritis
 Gastro-enteritis
 Hernia (State variety, mode of death and operation, if any)
 Intestines (Specify disease, as Inflammation, Intussusception,
 Ulceration, etc.)
 Liver (Specify disease, as Abscess, Cirrhosis, Inflammation, etc.)
 Peritonitis (Specify variety, as Tubercular, Traumatic, etc., and
 give cause of last mentioned)

ABSORBENT AND GLANDULAR SYSTEM

Bronchocele and Goitre
 Glands and Lymphatics (Specify organs involved and nature of
 disease)
 Lymphadenoma
 Tonsillitis

URINARY SYSTEM

Calculus, renal
 Calculus, vesical
 Cystitis, acute
 Cystitis, chronic
 Cystic disease of kidney
 Nephritis, acute (State variety)
 Nephritis, chronic (State variety)
 Prostate gland (Specify disease as Abscess, Hypertrophy, In-
 flammation, etc.)
 Pyelitis
 Uremia (State cause and mode of death)

REPRODUCTIVE SYSTEM

Abortion and Miscarriage (Give cause, mode of death and pe-
 riod of gestation)
 Childbirth (State conditions causing death, as Eclampsia, Hem-
 orrhage, Placenta previa, Rupture of uterus, etc.)
 Diseases of the uterus (Specify nature and cause of)

HEALTH OFFICER'S REPORT.

Diseases of the ovaries (Specify variety, as Abscess, Acute or Chronic Inflammation, Tumor, etc.; mode of death and operation)

Pelvic abscess (State cause)

Pelvic peritonitis (State variety, as Puerperal, Traumatic, etc., and give cause of last mentioned)

Pyosalpinx

Salpingitis

OSSEOUS AND INTEGUMENTARY SYSTEM

Abscess (Specify variety, as Articular, Cellular, Muscular, Osseous, etc., and state location and cause)

Carbuncle (State location and organs involved)

Caries and Necrosis (Specify variety, and state the bones and joints involved)

Pemphigus

Ulcers (Specify variety, and state location and organs involved)

Gangrene—other than senile (Specify seat or organs involved and state cause)

CLASS "C"—VIOLENT DEATHS.

Deaths from Accident, Misadventure, Negligence, and all forms of Violence, whether intentional, self-inflicted or otherwise, must be reported to the Coroner, who alone is authorized to certify as to the cause and manner of death in these cases. The HEALTH DEPARTMENT is not authorized to issue Burial Permits for them except on the Coroner's authority.

Deaths from the following causes are all to be referred to the Coroner for Certificate. They include—

Anesthesia	Hanging
Asphyxiation	Kick
Bullet wound	Machinery
Burning	Poisons
Criminal abortion	Ptomaine poisoning
Crushing	Railroad or Street car accident
Drowning	Run over by other vehicles
Electricity	Scalding
Explosion	Septic diseases
Exposure	Shock following operations
Falls	Strangulation
Fungi, mushrooms or toadstools	Suffocation,

as well as any form of Homicide, Suicide, or Sudden Death from unknown cause.

We invite your attention particularly to the several maps and charts accompanying the report, as follows:

No. 1—Map showing the location of all deaths from all causes during the year.

No. 2—Map showing the location of fatal cases of Tuberculosis.

No. 3—Map showing the location of fatal cases of Acute Lung Diseases.

No. 4—Map showing the location of fatal cases of Diphtheria, together with the location of reported cases thereof.

No. 5—Map showing the location of fatal cases of Typhoid Fever and Scarlet Fever.

No. 6—Map showing the location of fatal cases of Diarrheal Diseases.

CHARTS.

No. 1—Percentage to the Total Mortality from six of the principal causes of death, for thirty-three years.

No. 2—Showing Annual Mortality from all causes and Specific Febrile Diseases for thirty-three years.

No. 3—Showing the Annual Mortality from all causes, of children under five years of age, and from Cholera Infantum, for thirty-three years.

No. 4—Showing the Annual Mortality from Tuberculosis, Pneumonia, and Diseases of the Heart, for thirty-three years.

No. 5—Showing the Annual Mortality from Diphtheria, Typhoid Fever, and Smallpox, for thirty-three years.

No. 6—Showing the Annual Mortality from Scarlet Fever, Measles, and Whooping Cough, for thirty-three years.

No. 7—Showing the average reading of the barometer, thermometer, range of temperature, humidity and rainfall, and number of deaths from Tuberculosis, Pneumonia, Bronchitis, Diphtheria, and Typhoid Fever for each month for six years, from July, 1892, to June, 1898, inclusive.

BIRTHS.

In the matter of the registration of births, I regret very much to say that there has been a reprehensible lack of co-operation on the part of the physicians of this city in reporting to this office the births occurring in their practice. To such an extent has this neglect been carried that during several months of the past fiscal year the death rate has been vastly larger than the birth rate, as will be shown by our statistics hereto appended.

REPORT OF BIRTHS FOR FISCAL YEAR ENDING JUNE 30th, 1898.

THE USE OF ANTI-TOXIN SERUM IN THE TREATMENT OF DIPHTHERIA UNDER THE SUPERVISION OF THE HEALTH DEPARTMENT.

Another link in the chain of progress made by the Department during the past fiscal year is the free distribution of diphtheritic antitoxin to the poor of this city, and it affords me great pleasure to state, as a result, the statistics show a marked decrease in fatalities among those affected with this dread disease. The good resulting is more than emphasized by the fact that the majority of the cases treated by this method were, as a rule, among the very poorest classes in the tenement-house districts, where the surroundings were almost invariably unfavorable, and in consequence almost every case was extremely severe.

The inauguration of this treatment dates from November, 1897, and the only restriction placed upon the distribution of the serum (which we considered necessary in order to prevent extravagance) was the requirement that the physician in attendance certify over his signature that the party for whom the drug was intended was too poor to procure the same at his own expense. In almost every case physicians cheerfully accepted the opportunity, and in this manner your Department has distributed up to the present time about two hundred and ninety-five thousand units of the serum. The accompanying table will show the total number of cases treated, and, through the kindness of attending physicians who, at our request, have generously given us histories of their cases, we are able to show you interesting data in regard to the course of the disease and the result of the treatment.

2	1300	Immediate improvement. Convalescent within 48 hours. Diphtheritic membrane disappeared in 96 hours.....	Recovery.	
1	1000	Convalescent within 70 hours. Diphtheritic membrane disappeared on 7th day..	Recovery.	
1	1000	Convalescent on 2nd day. Diphtheritic membrane disappeared on 4th day.....	Recovery.	
1	1000	Improvement with recovery on the 6th day	Recovery.	
1	1000	Physician's report incomplete. Intubation performed	Recovery.	
1	2000	No "reaction" from the anti-toxin. Patient slept well and case progressed favorably until 3rd day. Increase of temperature with all symptoms of acute laryngitis. Case terminated satisfactorily within a week without any sequelae	Recovery.	

HEALTH OFFICER'S REPORT.

CASES TREATED BY PHYSICIANS WITH ANTI-DIPHThERITIC SERUM
COLLATED FROM THE REPORTS

No.....	NAME.	Age—Years.....	LOCATION AND EXTENT OF MEMBRANE.	RESULT OF BACTERIOLOGICAL EXAMINATION.
14	R. McH..	9	Tonsils.	Diphtheria bacilli, staphylococci and streptococci
15	M. McH.	4	Tonsils, uvula and soft palate.	Diphtheria bacilli, staphylococci and diplococci
16	E. P.....	4	Tonsils and posterior fauces, with ichorous discharge from nares.	No examination made. (Member of family of case No. 18.).....
17	L. P.....	6	Tonsils.	No examination made. (Member of family of case No. 18.).....
18	M. P.....	11	Throat almost occluded with membrane; nose invaded.	Diphtheria bacilli and diplococci.....
19	M. P.....	2	Both tonsils.	No examination made. (Member of family of case No. 18.).....
20	D. M.....	12	Both tonsils, uvula and pillars.	Streptococci and staphylococci.....
21	M. M.....	6	Both fauces and tonsils covered with membrane.	Diphtheria bacilli and staphylococci.....
22	C. H.....	Tonsils.	Diphtheria bacilli, staphylococci and streptococci
23	L. M.....	11	Both tonsils; cervical glands hard and enlarged.	Staphylococci and streptococci.....

FURNISHED GRATUITOUSLY BY THE HEALTH DEPARTMENT.
OF THE ATTENDING PHYSICIANS.

Number of Injections.....	Amount Injected—Units....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
2	2000	Immediate improvement under adverse sanitary conditions and lack of proper care. Rapid convalescence.....	Recovery.	
5	6000	Marked improvement immediately. Swelling reduced, pulse improved. Through lack of proper care and nourishment patient failed and died on the fifth day. The Anti-toxin was beneficial, and under favorable conditions would hope for recovery in a similar case.....	Death.....	Surroundings unfavorable; no nurse and no means of warming the room in which the father and three children lived.
3	4500	Improvement began in 12 hours and steadily continued until recovery.....	Recovery.	
2	4000	Quick and complete recovery.....	Recovery.	
1	6000	Most marked improvement. A hemorrhage of the nostrils set in, causing exhaustion and death.....	Death.....	Treated ten days previously without anti-toxin.
1	1500	Quick and complete recovery.....	Recovery.	
1	1500	The effect of one injection was remarkable. The case practically arrested. Temperature fell at once and in 24 hours the membrane was much thinner. In 2 days the membrane disappeared and temperature normal.....	Recovery.	
2	4000	Quick and complete recovery. Diphtheritic membrane disappeared within 48 hours	Recovery.	
3	Temperature normal since 3rd injection. Diphtheritic membrane disappeared about the same time.....	Recovery.	
1	1000	Immediate improvement. Diphtheritic membrane decreased one-half within 24 hours. On 3rd day Epistaxis severe. Pulse and temperature normal. Some appetite; glands less swollen; throat clean and patient convalescent.....	Recovery.

FURNISHED GRATUITOUSLY BY THE HEALTH DEPARTMENT.

OF THE ATTENDING PHYSICIANS.

Number of Injections.....	Amount Injected—Units.....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
2	1500	Lower pulse and decrease of temperature. Intubation 30 minutes after 2nd injection. Died three hours later.....	Death.....	This is a case where the anti-toxin was used as a "dernier ressort," being under care twelve hours only.
3	25	Within one hour temperature was reduced 2 degrees, and so remained for 20 hours. Arose to 102, which after 2nd injection decreased to normal. Membrane sloughing, gave 3rd injection of 500 units. Recovery on 4th day of disease	Recovery.	
1	1000	Slightly altered. Recovery on the 5th day of disease.....	Recovery.	
1	2000	Gradual disappearance of membrane and improvement of constitutional symptoms	Recovery.	
2	2000	Marked improvement and decrease of temperature from 103 to 100.....	Recovery.	
2	2000	Diphtheritic membrane disappeared entirely within 24 hours after second injection	Recovery.	
1	1000	Fever and throat symptoms immediately ameliorated and patient began to improve at once, with recovery in 4 days thereafter	Recovery.	
1	1000	Improvement within 24 hours, and continued to recovery.....	Recovery.	Serum successful.
2	2000	In eight hours pulse had dropped from 148 to 126, and had improved in quality very much. Temperature reduced 2.2 degrees. Membrane diminished in extent and seemed thinner. Following 2nd injection membrane disappeared rapidly. Temperature and pulse normal. Improvement very marked.....	Recovery.	First seen on fourth day of disease; extremely prostrated, pulse thready, nervous symptoms very marked.
1	1000	Immediate improvement with decrease of temperature; less cyanosis and breathing easier.....	Recovery.	Serious case; recovery due to the use of the serum.

OF THE ATTENDING PHYSICIANS.

Number of Injections.....	Amount Injected—Units....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
1	3000	Immediate improvement; patient quieter and slept a good deal. Very little perspiration 8 hours after injection. After 24 hours decided change in temperature, pulse and general condition; symptoms gradually disappeared with recovery about 4th day.....	Recovery.	
1	3000	Immediate improvement, with recovery in a couple of days.....	Recovery.	
2	3300	Within twenty hours after first injection was somewhat less strident, cyanosis less marked. Twelve hours after 2nd injection patient was completely relieved, no apparent obstruction in larynx. Pulse stronger. Result of serum treatment marvelous.....	Recovery.	A very severe case, complicated with bronchitis.
1	1000	Within 6 hours temperature reduced, respiration less difficult, membrane loosened. Within 48 hours membrane entirely disappeared	Recovery.	
1	3000	For a few hours after injection of serum the symptoms increased in severity (dyspnoea, cyanosis, etc.). After that, complexion cleared, respiration more quiet and pulse stronger until 9 hours after administration of serum, when, during brief struggle with nurse in an attempt to have him open his mouth, heart-failure carried him off.....	Death.....	Patient very refractory, and for first twenty-four hours case was treated as impending tonsillar abscess.
2	1600	Had a favorable effect on the disease as it reduced the symptoms, fever, etc., and caused a localization of the process. Temperature reduced and pulse improved within 6 hours after injection of serum. Gradual improvement, with recovery in 7 days..... Sequelae: Slight paralysis of pharynx, causing difficult deglutition.....	Recovery.

Number of Injections.....	Amount Injected—Units.....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
2	3000	Immediate improvement, with gradual decline of temperature to normal on 3rd day. Within a few hours nasal passages began to clear, and within 3 days were entirely free from membrane. The case was complicated with nephritis and albuminuria	Death....	
3	4000	Effect of serum remarkably prompt and beneficial. Immediate improvement, with decline of temperature and general improvement of constitutional symptoms. Membrane disappeared with recovery on 6th day.....	Recovery.	
2	2000	Improvement with decline of temperature. Recovery on 16th day after administration of Antitoxin.....	Recovery.	
2	2000	Immediate improvement, with decline of temperature $2\frac{1}{2}$ degrees. Twelve hours later, second injection of 500 units. From that time recovery uneventful. Discharged cured on 9th day.....	Recovery.	
5	10000	After each injection the temperature fell within 3 hours from 1 to 2 degrees, and patient seemed much relieved. The serum treatment exerted a powerful influence for the good in this case. The usual constitutional symptoms were not observed, and if we can judge from the severity of the local symptoms, we would certainly have looked for profound prostration. Edema of throat was intense, and after removal of tube on 8th day it had to be reinserted within 2 hours.....	Recovery.	Here I gave the last injection of serum, and tube was coughed up on following day and was no longer required; case intubated on second day and recovered on twenty-sixth day of disease.
4	1500	The effects of the injections appeared to be almost immediate. The membrane became loose after the 1st injection, attended by some slight bleeding. The	Recovery.

FURNISHED GRATUITOUSLY BY THE HEALTH DEPARTMENT.

OF THE ATTENDING PHYSICIANS.

	A. unit In- ject- ed—Units.— Number of In- jections.....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
		membrane seemed to thicken and roll up, at the same time showing yellow-gray discoloration. This process went on steadily until after the 4th injection (4th day), when membrane disappeared, leaving 3 small whitish ulcerations. Recovered on 14th day. Sequelae: Nephritis, lasting 2 months; paralysis of soft palate, lasting 3 months.....		
1	1000	Immediate improvement. Temperature and pulse dropped from 104 3-5 and 124, respectively, to normal within 48 hours, and patient practically well.....	Recovery.	Physician reports having used the serum on two other cases during the winter, with only good results, and will not attend a case in future unless permitted to use the serum.
3	3000	Marked decrease in temperature and pulse with increased volume, and diminution of membrane and diphtheritic fetor. Patient made an uneventful recovery. For 6 days before serum treatment patient had marked paralysis of soft palate.....	Recovery	
1	2000	Immediate improvement. In 18 hours left tonsil and uvula clean; right tonsil covered with membrane, which is loose and pulse normal. In 42 hours membrane easily removable. Temperature and entirely disappeared, no subjective complaint and no diphtheritic symptom visible, and case dismissed.....	Recovery.	
1	2000	No improvement. Case too far gone. Dyspnoea increased steadily until death, within a few hours. Saw the case on 3rd day; died on same day.....	Death....	
2	2000	Improved immediately after 2nd injection, with gradual convalescence and recovery. Physician states: "This was a bad case, and I believe patient would have died had it not been for the 2nd injection of Antitoxin."	Recovery.

OF THE ATTENDING PHYSICIANS.

Number of Injections.....	Amount Injected—Units....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
1	1000	Immediate improvement. The parents report that he brightened up considerably and was playing around the room about 5 minutes before his death at 4 o'clock p. m. on same day of administration of injection. The above case was moribund before using the Antitoxin, and death resulted from heart-failure.	Death.....	
1	1000	Immediate improvement, with diminution of diphtheritic symptoms. Result of Antitoxin very satisfactory, though convalescence somewhat slow.....	Recovery.	
1	2000	Immediate improvement, with fall of temperature and disappearance of exudate..	Recovery.	Has a weak heart and debilitated.
1	1000	Within 24 hours decided improvement in breathing and general condition. Good appetite, no fever, slept well, and epistaxis disappeared.....	Recovery.	
1	1000	Greatest improvement the following day. Slept and fed well and was less irritable. Good, steady pulse, and no fever.....	Recovery.	Just convalescent from pertussis.
1	1000	Great and immediate improvement.....	Recovery.	Complicated with earache, urticaria, rheumatism, etc.
1	1000	Very mild case. Immediate improvement and recovery.....	Recovery.	
1	2000	Reduction of temperature and improvement of symptoms. Recovery on 6th day	Recovery.	
2	4000	Improvement in throat, with reduction of temperature. Epistaxis very persistent, and checked only by solution of persulph. of iron.....	Death.....	Very delicate child; had spinal disease and stomach trouble, with frequent vomiting; unable to take nourishment.
1	1000	Within 48 hours no appearance of the disease, except extreme redness of throat and tonsils. No fever; pulse normal; eats and sleeps well.....	Recovery.

FURNISHED GRATUITOUSLY BY THE HEALTH DEPARTMENT.

OF THE ATTENDING PHYSICIANS.

Number of In-	Amount Injected - Units...	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
1	1000	Case very mild, scarcely any constitutional symptoms save slight fever, which immediately fell from 102 to 99....	Recovery.	
1	1000	Glands of neck seem to be more swollen on the following day; deposit more plentiful on tonsils and breathing not so free. Within 24 hours tonsils cleared off, pulse reduced and improvement in general condition manifest. Uninterrupted convalescence, with speedy recovery....	Recovery.	
1	2000	No immediate change, other than the pulse appears fuller. In 24 hours coughed up membrane on tonsils. Membrane gradually disappearing from uvula, aphonia less marked, breathing normal. Uneventful convalescence.....	Recovery.	Stridulous breathing, showing laryngeal involvement; general cyanotic condition; first saw child at 9 a. m., anti-toxin injected at 12 m., died at 2 p. m.
1	2000	No amelioration; patient died 2 hours after administration of Antitoxin.....	Death....	
3	5000	Improvement did not begin until 24 hours after last injection. Throat clean on 6th day.....	Recovery.	Complicated with albuminuria.
1	2000	Recovered promptly after injection of Antitoxin. On 3rd day throat clean.....	Recovery.	
3	2500	Immediate improvement. In 8 hours temperature normal, and improvement in general condition.....	Recovery.	
4	3500	Rapid reduction of temperature; pulse less rapid; exfoliation of membrane; marked improvement in the general appearance and condition. (Temperature fell from 104 to normal immediately after injection of Antitoxin).....	Recovery.	Very severe case.

Number of Injections.....	Amount Injected—Units....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
2	3000	Cessation of symptoms for 3 days, when they began again. Injected 1,500 units, with the result of rapid disappearance of all symptoms.....	Recovery.	The first injection would have been sufficient to immunize her, had she not been exposed continually to further infection; the second injection, however, did the work.
3	1100	Exfoliation of membrane and reduction of temperature to normal, where it remained. Uneventful convalescence.....	Recovery.	
1	500	Very satisfactory, though complaining of sore throat and earache. Pulse and temperature normal.....	Recovery.	
1	1000	Following morning throat clear, nares freer. No temperature, and pulse normal. Sleeps well and appetite good. Convalescence rapid.....	Recovery.	
1	1000	Membrane cleared off and throat felt more comfortable next morning. Exudation disappeared in three days.....	Recovery.	
1	1000	No fever and complete clearing of membrane in throat next day. Temperature normal, pulse 112; convalescence rapid..	Recovery.	
1	1000	Immediate improvement noticed next morning. Slept and eat well and looked much brighter. Breathing greatly relieved and membrane disappeared. Pulse regular and no fever.....	Recovery.	
3	3000	Reduction of temperature of 2 degrees a day. Normal on 3rd day; pulse regular. Very great amelioration of symptoms on 4th day; exudate nearly disappeared....	Recovery.	One of the most malignant cases of diphtheria; would not have recovered under any treatment except anti-toxin.
1	1000	Immediate improvement, with exfoliation of membrane in three days.....	Recovery.	
1	1000	Great improvement in condition. Sleeps well; fever entirely disappeared. Convalescence progressing rapidly.....	Recovery.	
1	1000	Great improvement, with reduction of temperature from 103.5 to normal within 24 hours. Convalescence progressing rapidly	Recovery.

FURNISHED GRATUITOUSLY BY THE HEALTH DEPARTMENT.
OF THE ATTENDING PHYSICIANS.

Number of In- jections.....	Amount Injec- ed—Units....	SYMPTOMS AND CONDITION FOLLOWING USE OF SERUM.	RESULT.	REMARKS.
1	2000	Temperature on day of injection between 101-102, remaining same for 24 hours, then went down to 101, next day to 100.5, then to 100, remaining for 2 days the same, then to 99. The membrane of the palate and pharynx melted like butter in the first 24 hours after the injection and cleared up, whereas the necrotic membrane on the tonsils remained for 4 days more, and everything cleared up on the 6th day.....	Recovery.	This was one of the worst cases I have seen for a long time, and I was greatly pleased at the good work of the anti-toxin.
2	4000	Lessening of croupy symptoms and general improvement beyond expectations..	Recovery.	
2	2400	General improvement. Temperature fell about 3 degrees. Appetite improved; membrane loosened and did not reappear to any great extent. After 36 hours the tonsils were free from all membrane. Very satisfactory.....	Recovery.	
1	1000	In 20 hours extension of the membrane to left tonsil and to borders of velum-palati. Pulse and temperature unchanged (pulse 120, rectal temperature 102). Following day membrane disappeared from right side; pulse 96, temperature 100.5; and on the next day no membrane and no fever.....	Recovery.	
2	2500	General improvement in local and constitutional symptoms.....	Recovery.	
1	2000	Steady improvement from the very first..	Recovery.	
2	3500	General health improved and membrane began to disappear, with recovery on 10th day.....	Recovery.	

CLINICAL REPORT OF CASE NO. 24.

DIPHTHERIA

TREATED WITH ANTI-DIPHTHERITIC SERUM FURNISHED GRATUITOUSLY BY THE SAN FRANCISCO HEALTH DEPARTMENT.

Reported by Dr. L. Pawlicki.

H. F., aged six and a half years, complained of sore throat three days before I was called in to treat him.

December 22nd, 1897—I found both tonsils swollen and covered with thin white membrane; suspicious discharge from the right nostril and feverish. Temperature, 100 2-5; pulse, 112. The case was at once reported to the Health Officer, and bacteriological examination of the tonsillar swab made by Dr. Spencer, which proved to show diphtheria bacilli. The quarantine of the house was instituted. At noon of the same day, injection of 1,500 units of Mulford's Antitoxin was given; spraying the throat and both nostrils with the solution of Peroxide of Hydrogen was ordered.

December 23rd, 1897—Morning temperature, 99 1-5. Both diphtheritic patches on the tonsils are shrinking and loose. Discharge from the nostril still continues. Second injection of Mulford's Antitoxin, 1,500 units.

December 24th, 1897—Morning temperature, 99 3-5. The membranes on the tonsils both disappeared entirely. Discharge still continues from the nostril. Third injection of 1,800 units of Mulford's Antitoxin. The evening temperature having increased to 100 2-5, a fourth injection of 2,000 units of Mulford's Antitoxin was given.

December 25th, 1897—Morning temperature, 99 3-5. Discharge from nose considerably less; the throat looks well.

R. Tinct. Ferri Muriatice, gtt. X, every two hours.

DATE.	TEMPERATURE.	SYMPTOMS.
1897—December 26.....	99 1-5
December 27.....	98 4-5	Discharge from nose very slight.
December 28.....	99 2-5
December 30.....	98 3-5	No discharge from the nose.
December 31.....	98 3-5
1898—January 1.....	99
January 2.....	100 1-5	R. Quinine Sulph. gr. XII a day.
January 3.....	99 2-5	Continue quinine.
January 4.....	99
January 5.....	98 3-5	Urine normal.
January 6.....	99 1-5
January 7.....	98 3-5
January 8.....	99
January 9.....	99 2-5
January 10.....	99 2-5
January 11.....	98 4-5
January 12.....	98 3-5
January 13.....	99 2-5	Pulse 100; R. Quin. Sulph. gr. XV a day.
January 14.....	99 2-5	Afternoon, 100 3-5; evening, 99 3-5.
January 15.....	99 2-5	Second bacteriological examination of the nasal discharge revealed no diphtheritic bacilli.
January 16.....	99 2-5	Continue Quin. Sulph.
January 17.....	99 3-5	House fumigated.
January 20.....	As the patient is playful, tongue clean, appetite good, sleeps well, and seemingly feels comfortable and strong, he was allowed to get up.
January 21.....	99 4-5	Pulse, 100. After being up all day yesterday, he feels well, notwithstanding abnormal temperature and pulse depending in no way upon diphtheritic poison in the system.

CLINICAL REPORT OF CASE NO. 38.

DIPHTHERIA

TREATED WITH ANTI-DIPHTHERITIC SERUM FURNISHED GRATUITOUSLY BY THE SAN FRANCISCO HEALTH DEPARTMENT.

Reported by Dr. Edward Storrer.

F. H., aged three years six months, complained of sore throat Thursday evening, January 6th, 1898, and I saw him Friday morning.

Both tonsils were tumefied and a few follicles had the characteristic exudate. The surfaces were well swabbed off with pure oxygen peroxide, and 10-drop doses of tincture of iron in glycerine were given every six hours. The child was unable to gargle, and the spraying of the throat was ineffectual, so the swab was used as the most efficient. Temperature, 102; pulse, 130.

Saturday morning, I found that he had passed a restless night, had taken no nourishment during the last twenty-four hours, had passed water but no action of the bowels. Temperature, 102; pulse, 130. Exudate somewhat more abundant, the rounded spots running into patches. The iron to be continued four times during the twenty-four hours, and $\frac{1}{8}$ gr. Calomel and $\frac{1}{8}$ gr. Ipecac given for three doses. Milk and broth as nourishment.

Sunday morning, I found the exudate somewhat more profuse, the child fretful, no tumefaction of the parotid or sub-maxillary glands. Bowels had moved twice; refused all nourishment, but had taken a little water. Temperature, 100; pulse, 120. Hot water compresses to the throat and continue the iron and local applications.

Monday morning, the exudate covered both tonsils, the anterior and posterior surfaces of the uvula, the left arch of the return and upon the pharyngeal wall. A very foetid odor of the breath. Respiration, 30, and noisy. Temperature, 99; pulse, 100. Fearing Klebs' Loeffler

bacilli, I removed a piece of the membrane and submitted it to the Board of Health's Bacteriologist for examination. Many of the symptoms of diphtheria being present, and fearing to wait until I received the microscopic report, I procured some Antitoxin from the Board of Health and administered 500 units. The treatment of iron and applications to the throat to be continued. No reaction followed the administration of the Antitoxin; but there was a suppression of urine for twelve hours. This function was re-established by a hot-water bath.

Tuesday morning the temperature was 97.3-5, pulse 100. Slept restlessly during the night. Drank water occasionally, but would take no nourishment of any kind. The breath had lost its bad odor, but the membrane was as extensive as on the day before. The child, aside from being fretful and peevish, was clear-minded; no vestige of coma; could be coaxed to have local applications made, and was generally tractable, excepting that he would take no nourishment but a very little milk. Whiskey and milk he always vomited.

The report from the Bacteriologist said nothing present in the specimen of membrane but the non-pathogenic Staphylococci.

Wednesday the child was better; had taken a little milk; slept more naturally. Temperature, 98; pulse, 100.

Thursday the exudate was disappearing, the swelling of the tonsils was subsiding, the odor quite gone. The bowels had moved, water had been passed four times during the twenty-four hours. There was a great disinclination to take nourishment. Temperature, 97; pulse, 100.

Friday, the membranous exudate had quite disappeared, the tumefaction of the tonsils had gone, and, aside from a deeper red, the throat looked well. Temperature, 97; pulse, 100. Aside from being fretful, the child was clear-minded and convalescent.

At 2 a. m. on Saturday morning his mother asked him, when he awaked, if he would have a drink. He said, "No," turned over and died.

CONTAGIOUS DISEASES.

At this point in my report it might be of interest to call your attention to the accompanying comparative statement of reported cases and deaths from Diphtheria, Measles, Scarlet Fever and Typhoid Fever for year just ended.

COMPARATIVE STATEMENT OF REPORTED CASES OF AND DEATHS FROM DIPHTHERIA, MEASLES, SCARLET FEVER AND TYPHOID FEVER.

DEPARTMENTS.

The City and County Almshouse, under the management of the present Superintendent, gives very satisfactory evidence during the past fiscal year of the work that has been accomplished. Many improvements have been made, amongst which might be mentioned a well-equipped laundry, morgue, new sanitary latrines, etc., etc. The best proof of successful administration in this department is evidenced by the happy content of the poor of our City and County resident within its boundaries.

The City and County Hospital, under the management of the present Superintendent Physician, has been extremely satisfactory, and this is the more surprising when we stop to consider the many disadvantages under which the executive officer is working. The buildings are old and unsanitary, inadequate for the proper housing of the sick poor, particularly in the winter months; the appropriation is small, and the power of the Superintendent Physician is limited as regards expenditures. In spite of all these drawbacks, there is very little room for criticism.

The reports of other departments and Inspectors, elaborations of which may be found further on in this volume, are summarized as follows:

Health Inspectors—	
Nuisances abated during the year.....	2,068
Plumbing Inspectors—	
Nuisances abated during the year.... ..	2,724
Milk Inspectors—	
Wagons inspected.....	70,537
Milk inspected, (gals.).....	3,401,149
Laundry Inspector—	
Total inspections.....	1,750
Market Inspectors—	
Total inspections.....	9,541

Cigar Factory Inspector—	
Total inspections.....	757
Bakery Inspector—	
Total inspections.....	1,366
Chemical Laboratory—	
Total number of analyses.....	562
Bacteriological Laboratory—	
Total examinations.....	955

Another subject of moment that I desire to call to your particular attention is the inadequate force of both Market and Plumbing Inspectors. Considering the vast area of this peninsula, and the wide distribution of the various markets throughout the city, as also the concentration of the slaughtering interests at Butchertown, where all meats are prepared for consumption, it is safe to assume that in order to properly supervise and inspect this branch of the Department the force should be doubled. This would insure results that would prove in every way beneficial and satisfactory. Furthermore, regulations regarding the hours of slaughtering might be of service both to butchers and the public at large; it certainly would facilitate thorough inspection on the part of the Inspectors in this Department. The matter might be amicably adjusted by consulting with the wholesale dealers of this city.

While speaking on this subject, it might be well to recall the matter of the United States tuberculin test on cattle, which occupied so much of our time a few months ago, and which, during its application, was of such value in raising the standard of milk, and certainly checking in some degree that great scourge of humanity, Tuberculosis. Lack of funds and the opposition of some of the dairymen compelled us to discontinue this crusade. It is to be hoped that in the coming fiscal year both obstructions will be removed—i. e., that the Supervisors in their generosity will furnish us with the necessary funds, and that the milk producers of our

State will aid us in our efforts gradually to eliminate from their herds diseased cattle.

That the force of Plumbing Inspectors in this Department is inadequate is most emphatically emphasized by the vast number of complaints which are referred to this class of Inspectors. Particularly so has this been the case since the adoption by the Board of Supervisors of the late Plumbing Ordinance. Unfortunately though it be, it is nevertheless a fact that the plumbing systems in the various business houses and residences of this city are extremely bad, are extremely unsanitary, and that great numbers of cases of disease can be directly traced to the unhygienic surroundings in which the people have been forced to live on account of lax laws in regard to matters of this kind.

While the Health Department has been unsuccessful in its efforts to secure a new City and County Hospital and a new Hospital for Contagious Diseases, let it go on record that we are not discouraged, but will as diligently exert all our efforts in the future, as we have in the past, eventually to attain that end, feeling as we do that both the present institutions are a blot on the fame of our fair city.

In conclusion, I might suggest to your Honorable Board that I fear a marked increase in the death rate of this City and County for the coming year, basing my opinion on the fact that during and after the month of May a vast number of United States troops will have been encamped within our limits, and the change of climate, life and surroundings will of necessity result in many deaths amongst the soldiers.

Your attention is directed to the accompanying Financial Statement of the Department, and the Statement of Transcripts and Fees, for the past fiscal year.

Respectfully submitted,

A. P. O'BRIEN, M. D.

Health Officer.

This department, in making its annual report, desires to call attention to the attempted usurpation of the powers of the State of California relative to Quarantine, as set forth in the Political Code of the State of California, Sections 3009 to 3032, by the Marine Hospital Service of the United States and given support by the Secretary of Treasury at Washington, D. C.

After much inquiry personally conducted in Washington, D. C., and at this port, I find that the assistance of the Secretary of Treasury was obtained by misrepresentation on the part of M. J. Roseneau, M. D., in charge of the United States Quarantine Station at Angel Island.

On information and belief, I am further convinced that a secret system of reporting Quarantine matters at this port has been conducted between M. J. Roseneau, M. D., and Walter Wyman, M. D., of the Marine Hospital Service, stationed at Washington, D. C., where certain charges against the State Quarantine Officer were maliciously invented and given as facts to the Federal authorities at Washington, to influence what authority they may possess in furthering the interest of the Marine Hospital Service and against the State.

I am still further convinced that the Marine Hospital Service at this port has attempted to influence the press of San Francisco in its object to insult your legally appointed officer and the laws of the State of California.

The reason for the alleged conduct of the Marine Hospital Service is the result of a preconcerted action on the part of the service, emanating in Surgeon-General Wyman, to gain control of Quarantine throughout the United States, both land and sea.

The Surgeon-General of the Marine Hospital Service bases his action on personal grounds and influence, and attempts to construe the Congressional Act of February, 1893, as granting him absolute power, where such Act specifically states that there shall be aid and co-operation.

This false construction by Surgeon-General Wyman has

involved this department in many legal complications, which at present are pending in the courts, has interfered with the commercial interests of this port, and has deprived the General Fund of the City and County of San Francisco's treasury of money due under Section 3020 of Political Code.

A brief review of the actions of M. J. Roseneau, M. D., who poses as the Federal Quarantine Officer, will show the autocratic position he assumes.

1st. A positive refusal on his part to recognize the authority or deliberations of the Board of Health of San Francisco. Explanatory of this charge I refer to a resolution of the Board of Health which declared Hongkong, Hiogo, Shanghai and Nagasaki infected ports, and where all Oriental steerage passengers and mails, arriving from above ports, be removed to the Quarantine station for fumigation. The pseudo-Quarantine Officer refused to accept the mail, giving as a reason his individual opinion, against that of the Board of Health and Quarantine Officer, that it was unnecessary.

2nd. Taking suspected cases from the Pacific Mail S. S. Co.'s dock, after the vessel had entered the Custom House, and was annexed to the State wharf and contiguous to municipal property.

3rd. Refusing to permit the local authorities to hold an autopsy on a suspected case arriving on the steamship San Juan, July 11th, 1897. In this instance he declared that he had not the necessary instruments to hold a post mortem, and when the Quarantine Officer left the vessel to obtain the necessary instruments ashore, he illegally ordered the vessel to Angel Island Quarantine Station, where a hurried post mortem was held, and the body disposed of immediately, as I believe, to conceal any information that the local authorities required, and to which legally they were entitled.

4th. Unnecessarily detaining vessels by a neglect of attention, and in many cases ordering vessels to the Angel

Island Quarantine Station for fumigation, where such detention and fumigation were medically considered absolutely unnecessary and unwarranted.

5th. Insulting the State laws, which require an inspection by the State Quarantine Officer within certain defined limits, by telling the masters to pay no attention to the State Quarantine Officer's order to proceed beyond the Quarantine limit.

6th. Sealing the bills of health, which the State law requires to be inspected by the State Quarantine Officer.

7th. Maliciously and intentionally violating the confidence and deliberations of a consultation with the San Francisco Board of Health solicited by himself.

8th. Urging and influencing the Custom authorities to cause the arrest of the State Quarantine Officer while in the legal discharge of his duties. While this presumptuous authority has not caused any arrest, it has added to the spiteful indignations cast upon the laws of the State of California and her Executive Officer, and has attempted to ridicule the good intention of the State in preserving her citizens from disease, and while the legal value of such an order is confined to the mythical Wyman-Roseneau code, with its would-be penalty, your Officer has earnestly worked to carry out the intention of the State—that is, the protection of its citizens.

To the above I desire to add that I am in possession of numerous complaints, entered in this department, of the destruction of property by fumigation, belonging to those detained at the Angel Island Quarantine Station. I have personally witnessed the property of quarantined passengers, which had been destroyed by fumigation, comprising clothing, shoes, bric-a-brac, etc., by the incompetency of those in charge, and the crude and unscientific machinery used to fumigate.

Respectfully submitted,

WM. P. CHALMERS, M. D.,
Quarantine Officer.

REPORT OF THE CHEMIST.

San Francisco, July 1st, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

Gentlemen: I have the honor to submit herewith the report of the work accomplished in your Chemical Department during the fiscal year 1897-98.

The work embraces mainly the analyses of foods and the investigations necessary to establish the extent of adulteration thereof. Several special investigations vital to the health of the community have been carried out and are given in this report.

In all, 562 separate samples have been analyzed during the year, the substances analyzed being the more common articles of food, such as one purchases on the open market, and might be called, generally speaking, prepared foods.

When it is considered that this department has been handicapped in many ways by the lack of space in which to work, and a thorough equipment of apparatus which is absolutely requisite for some investigations, and the constant need it has had of more men qualified to carry out investigations, it will be appreciated that no small amount of work has been done.

Crowded and hampered as it has been, it is evident that a wholesome good has been accomplished by the department in the regulation of and stopping to a considerable extent the sale of adulterated food.

In order to place before your honorable body the most imperative needs of this department, I beg to make the following suggestions:

The Chemical Laboratory should be enlarged or given a new room which is well lighted and from which the noxious gases could be easily excluded.

It should have a better equipment of technical apparatus.

This equipment should include all the conveniences of a modern laboratory, such as water, gas and electric connec-

tions, and more suitable work benches that we at present have.

The increasing of the equipment already on hand, according to the suggestions offered above, would render this department one of the most efficient of its kind in the United States, and great good could be expected from it in checking the alarming and ever-present adulteration of food.

In conclusion, I would say, while I have been associated with Prof. W. T. Wenzell, the official Chemist, as Assistant Chemist during the life of the Laboratory, and have performed most of the chemical work, it has been done entirely under his direction and by his methods. Consequently the credit for the success of the Chemical Department is largely due to him.

ANALYSES OF CATSUP.

Of four samples of tomato catsup submitted and analyzed, only one was found to be up to the official standard for catsup—namely: Total solids, 20 per cent.; no foreign coloring matter, and not more than four ounces of salicylic acid for 60 gallons.

In connection with the adoption of a standard for catsup by your Honorable Board, the question as to the amount of salicylic acid that might be permitted therein was investigated. The report that was rendered at that time is given below.

THE ACTION OF SALICYLIC ACID UPON THE DIGESTIVE PROCESS.

That salicylic acid retards fermentative processes outside of the living organisms is a fact well established. It is, therefore, not unreasonable to suppose that a similar effect would follow when this agent is introduced into the stomach, thereby impairing to some extent the proteolytic action of the gastric juice. To this effect should also be added the action of the drug itself upon the animal economy.

In order to determine the question at issue, the following experiments were instituted:

An artificial digestive fluid was prepared, to which the white of an egg, previously boiled and properly comminuted, was added. This mixture was subjected to digestion both with and without salicylic acid.

The solution or liquid was constituted as follows:

100 c. c. of acid solution of 2 per cent HCl.
1 gram of Armour's Pepsin.
1 gram of the coagulated white of egg.

Three flasks were prepared. Number 1 having no salicylic acid; number 2, .05 grams of salicylic acid; number 3, .10 grams salicylic acid.

The flasks were exposed in a thermostat to a temperature of 100 degrees Fahrenheit for five and one-half hours, and were frequently agitated during the digestion. At the expiration of the stated time the digested fluids were passed through weighed filters; the contents of the filters were washed, dried and weighed.

The results of the experiments were as follows:

Filter from the blank experiment No. 1—	
Weight of filter and contents after drying.....	.2431 grams
Weight of filter.....	.2427 grams
Undigested residue.....	.0004 grams
Filter from flask containing .05 grams of salicylic acid No. 2:	
Weight of filter and contents after drying.....	.2425 grams
Weight of filter.....	.2372 grams
Undigested residue.....	.0053 grams
Filter from flask containing .10 grams of salicylic acid No. 3:	
Weight of filter and contents after drying.....	.2482 grams
Weight of filter.....	.2394 grams
Undigested residue.....	.0088 grams

On subtracting the amount of undigested albumen of the blank experiment from the albumen residue of the other two experiments, the absolute amounts of undigested albumen in the latter were demonstrated as follows:

.0053 grams — .0004 grams = .0049 grams. Flask No. 2
.0088 grams — .0004 grams = .0084 grams. Flask No. 3

These amounts represent albumen dried at a temperature of 212 degrees Fahr.; the albumen of the egg is composed, in 100 parts, of approximately 15 parts of albumen and 85 parts of water. It is necessary, therefore, to convert the dried albumen into normal white of egg, as follows:

$$\frac{.0049 \times 100}{15} = .0326 \text{ grams of white of egg.}$$

$$\frac{.0084 \times 100}{15} = .0560 \text{ grams of white of egg.}$$

On multiplying these respective amounts by 100, the percentage amounts of the undigested albumen will be obtained as follows:

.0326 x 100 equals 3.26, the percentage amount of undi-

gested albumen from the use of .05 grams of salicylic acid.

.0560 x 100 equals 5.60, the percentage amount of undigested albumen from the use of .10 grams of salicylic acid.

The matter may be considered from another standpoint.

If a digestive fluid will digest 100 parts by weight of coagulated albumen in the absence of salicylic acid, then a liquid of a similar volume containing .05 grams of salicylic acid will digest 96.74 per cent. of the albumen, and a liquid containing .10 grams of salicylic acid will digest 94.40 per cent. of coagulated albumen.

And now we may consider the quantitative relations:

.05 grams = .77 grains.
 .10 grams = 1.54 grains.
 100 c. c. = about 3 fluid ounces.

Query: How much salicylic acid would a person ordinarily consume during a meal?

If an average of one ounce of catsup (two tablespoonfuls) be consumed, then the amount of salicylic acid would be about .77 divided by 3, or .26 grains of salicylic acid in a catsup containing .05 grams to 100 c.c.

Then, again, if the catsup contains .10 grams salicylic acid to 100 c.c., the amount of salicylic acid consumed in two tablespoonfuls of catsup would be 1.54 divided by 3, or .51 grains of salicylic acid.

These facts I present to your honorable body, from which you can form your opinion if such quantities are prejudicial to human health.

I would, in conclusion, also remark that there is a difference of opinion among manufacturers of tomato catsup as to the amount of salicylic acid necessary for its preservation.

Some manufacturers say four ounces of the acid to sixty gallons of catsup. Others say it should be eight ounces to sixty gallons.

If catsup contains .05 grains to 100 c.c., this amount falls within the limit of four ounces to sixty gallons.

If .10 grams to 100 c.c. are present in the catsup then the ratio will be eight ounces to sixty gallons.

The following tabulated statement shows the itemized analyses:

CONDENSED MILK.

In the analyses of products of milk that are intended for use as a substitute for fresh cow's milk, two distinct articles are commonly met with, one sold under the name of *condensed milk*, and the other known by one of two names, *sterilized cream* or *evaporated cream*.

By condensed milk is usually understood cow's milk mixed with cane sugar in certain proportions which has been evaporated to the consistency of a more or less thick syrup.

Sterilized or evaporated cream is defined by the trade as cow's milk which has been evaporated to a creamy consist-

In tabulating the analyses of these products the two classes have been segregated.

Twenty-two samples of condensed milk have been analyzed during the year. Of this total number 15, or 68 per cent., were found to be below the standard adopted by your honorable body for such products.

These samples included thirteen different brands of condensed milk, three of which were Californian products. Each of the California-made brands were below the official standard, while of the remaining ten brands one-half were found to be below the standard.

That condensed milk made in our own State should show a higher proportion of inferior products than that which is of Eastern manufacture is a fact that gives but little credit to our producers.

It will be seen that most of these samples are but slightly below the standard when absolute amounts are considered. This slight difference is undoubtedly caused by indifferent manufacture and could be easily remedied. In some cases, however, as much as 88 per cent. difference is noticed. Such small amounts of butter fat as are shown in numbers 323, 301, 305, 621 and 193 show unmistakably that the samples were made from skim milk. When such articles are sold as condensed milk, and no statement is made to disclose their nature, the act of selling should be considered unlawful.

.....	66.94	13.56	8.49	9.51	1.50	Butter fat fully up to official standard.
McAllister-Franklin .	72.22	12.02	7.78	6.67	1.31	16.3 per cent. below official standard in butter fat.
.....	68.33	4.37	4.40	22.28	.62	So-called natural cream.
.....	71.77	6.10	4.37	17.32	.44	So-called natural cream.

Viewed in the light of these analyses it will be seen that the term *cream* when applied to such products is a misnomer.

By *cream* is understood a substance derived from cow's milk, the average composition of which is given as containing 23 per cent. of butter fat. If, then, we are given a sample of *sterilized cream* we should have a substance the composition of which would be approximately that of average fresh cream. On the other hand, if we purchase *evaporated cream*, we should have a higher percentage of butter fat than we would obtain in average fresh cream, according to the amount of evaporation which the cream had undergone.

Clearly, the samples of "cream" analyzed do not come up to the name under which they are sold.

They are nothing more than fresh milk which has been concentrated in varying proportions, even the best of them not approaching fresh cream in richness in butter fat.

These remarks apply to all but the last three samples. Number 639 is sold as condensed milk, and is clearly within the meaning of the law, although it is 16 per cent. below the established standard. Numbers 359 and 631 are samples of natural cream, and certainly approach more closely to it than do the "sterilized" or "evaporated" creams.

INVESTIGATION OF THE CITY'S GAS SUPPLY.

Regarding the gas supply of San Francisco, I would state, after referring to the analyses embodied in this report, that the average of three analyses made of the gas supplied by the Pacific Gas Improvement Company show that the gas contains 24.33 per cent. of carbon monoxide.

A similar analysis of the gas furnished by the San Francisco Gas and Electric Company shows that this gas contains an average of 16.44 per cent. of carbon monoxide.

CHEMIST'S REPORT.

GAS ANALYSES.

No.	DESCRIPTION OF SAMPLE.	FROM WHAT SOURCE.	Carbon dioxid...	Hydro- Carbons.	Oxygen..	Carbon Monoxide.	Methylene.	Hydrogen.	Nitrogen.
650	Gas taken from jet in office of Chief Food Inspector.....	Pacific Improvement Co.'s main..	3.5	7.0	0.0	24.7	21.6	35.0	8.2
651	Gas taken from jet in office of Gas and Water Inspector.....	S. F. Gas and Electric Co.'s main.	2.0	6.4	0.0	15.6	30.6	35.5	9.9
91	Gas taken from jet in office of Chief Food Inspector.....	Pacific Improvement Co.'s main..	2.8	6.6	0.0	24.1	21.2	34.4	10.9
92	Gas taken from jet in office of Chief Food Inspector.....	Pacific Improvement Co.'s main..	2.8	6.4	0.0	24.2	22.1	34.1	10.4
93	Gas taken from jet in office of Gas and Water Inspector.....	S. F. Gas and Electric Co.'s main.	3.03	7.07	0.00	18.58	30.41	35.55	5.36
94	Gas taken from jet in office of Gas and Water Inspector.....	S. F. Gas and Electric Co.'s main	2.93	6.56	0.00	15.15	31.81	34.74	8.81

These results show that the gas of the Pacific Gas Improvement Co. contains one-third more of carbon monoxide. As both gases are mixtures of carburetted water gas and coal gas, and as gas containing any desirable amount of carbon monoxide can easily be obtained by admixture, there is no reason why the two companies should not supply a gas of analagous composition.

WATER GAS VERSUS COAL GAS.

The gas known as water gas has been known for many years, but has only within the last twenty-five years risen to the important position it now occupies.

Water gas is generally obtained by the decomposition of water or steam in contact with incandescent carbon in the form of anthracite coal or coke. The process may be divided into two distinct operations: first in the formation of carbonic acid and liberation of hydrogen, two oxygen atoms from the water combining with one atom of carbon to form carbonic acid, the four atoms of hydrogen being set free as explained by the following symbolic reaction: $2 \text{H}_2 \text{O} + \text{C} = \text{CO}_2 + \text{H}_4$.

The second stage of the operation is explained on the theoretical assumption that the carbonic acid thus formed in the presence of an excess of the incandescent carbon will take to itself another atom, the carbonic acid to be reduced to carbon monoxide, thus $\text{CO}_2 + \text{C} = 2\text{CO}$. So that the main and final result would be hydrogen and carbon monoxide equal volumes each. It is from these theoretical grounds that the present system for improved illuminating gas was evolved.

The following average analyses made by Professor Crum Brown of the University of Edinburgh in 1896, of water gas from two separate works, give its usual composition.

	PER CENT.	
	First.	Second.
Carbonic acid.....	10.9	5.5
Oxygen.....	0.0	0.0
Carbon monoxide.....	35.5	41.2
Hydrogen.....	50.5	50.9
Nitrogen.....	3.4	2.1
	100.0	100.

The analysis shows that the gas still contains a considerable amount of unconverted carbonic acid.

Carbon monoxide is a colorless and odorless gas. As a fuel it is more valuable than hydrogen because it carries more heat than water vapor. Whilst, therefore, water gas is a good fuel, it is of no use as an illuminating agent. If, however, it is mixed with some gas or vapor rich in illuminants or heavy hydro-carbons (containing relatively large proportions of carbon) a stronger illuminating flame can be obtained. Amongst the so-called illuminants are classed the heavy hydro-carbons ethylene, acetylene, propylene, butylene, benzine and other hydro-carbon vapors, which yield light; but the illuminating power of the gas depends principally upon the amount of ethylene it contains, which, during the combustion of the gas, become dissociated into marsh gas and carbon, the solid particles of which becoming incandescent emit white light. In gas analysis the heavy hydro-carbons here referred to are classed together as illuminants.

Water gas when enriched with oil gas is called carburetted water gas. In making carburetted water gas by modern methods, the oil gas is not made separately and then

added to the water gas; but the oil (petroleum) itself is sprayed into the hot crude water gas in a chamber called a carburetter. This oil is immediately vaporized, and being thereupon strongly heated in a super-heater decomposes, generating oil gas ready mixed with water gas. This crude carburetted water gas has to be purified from tarry matters, sulphur compounds and carbonic acid in the same manner as crude coal gas, when it then constitutes the illuminating gas which is at the present time supplied to consumers in New York by the Consolidated Gas Company; Philadelphia, by the United Gas Improvement Company; Boston, by the Boston Gas Light Company; Chicago, by the United Gas Improvement Apparatus Company.

The following table represents (officially obtained) analyses of illuminating gas used in the above-named cities:

	PER CENT.			
	New York, 1897.	Chicago, 1897.	Boston, 1896.	Philadelphia 1897.
Carbonic acid.....	2.6	3.8	2.13	.14
Illuminants.....	13.6	14.6	10.15	12.82
Oxygen.....	.7	0.0	.21	0.06
Carbon monoxide.....	28.9	28.0	20.48	28.26
Hydrogen.....	29.5	35.6	40.41	37.20
Marsh gas.....	19.9	17.0	20.77	18.88
Nitrogen.....	4.3	1.0	4.35	2.64
	100.0	100.0	100.00	100.00

The illuminating gas used in Boston is a mixture of carburetted water gas and coal gas. In New York, Chicago and Philadelphia carburetted water gas is in general use, as the high percentage amount of carbon monoxide plainly shows. There seems to be no objection to the introduction of carburetted water gas in these cities, as a clean, brilliant and high candle-power gas is preferred.

Advantages claimed for carburetted gas:

(1). That it is the cheapest and best gas that can be made.

(2). That it furnishes consumers of gas a higher candle-power (28-30) than any other.

(3). That it is absolutely free from smoke and burns with a brilliant flame.

(4). That on mixing a high-candle water gas with ordinary coal gas the candle-power of the mixed gas is raised to a desirable point, and a freedom from smoke is secured.

The disadvantages charged to carburetted gas:

There is only one, and it is unquestionably a serious one—the presence of a large proportion of carbon monoxide derived from water gas.

Coal gas is made by the destructive distillation of bituminous coal. It contains a comparatively small proportion of carbon monoxide, and is greatly inferior as an illuminating agent to carburetted water gas. On account of the smoky character of the flame, caused by its imperfect combustion and the generation of obnoxious sulphur products, it produces the unavoidable destruction of decorations on the walls and ceilings of rooms. This form of illuminating gas is yet in use in Louisville and Cincinnati, and most likely in many of the smaller cities.

The following table gives the composition of purified coal gas in the general localities mentioned. (1) Chemnitz, Saxony, (2) ordinary London gas, (3) London cannel-coal gas, (4) San Francisco Gas Light and Electric Company:

	PER CENT.			
	No. 1.	No. 2.	No. 3.	No. 4.
Carbonic acid.....	1.08	0.7	0.1	2.0
Oxygen.....	0.41	0.0	0.0	0.5
Carbon monoxide.....	4.45	7.5	6.8	6.8
Hydrogen	51.29	46.0	27.7	57.0
Illuminants.....	4.91	3.8	13.0	5.6
Marsh gas.....	36.45	39.5	50.0	23.0
Nitrogen.....	1.41	0.5	0.4	5.1
	100.0	100.0	100.0	100.0

On comparing the above analyses, it will be seen that whilst the gas made from cannel coal, on account of its percentage of illuminants, gives a higher grade of candle power, yet on account of deficiency in hydrogen it is open to the objection that the flame must be exceedingly smoky and sooty, and should therefore be declared a nuisance.

MIXTURES OF CARBURETTED GAS AND ORDINARY COAL GAS.

Since the introduction of water gas, which is on account of its cheaper production, greater candle power and improvement in other ways, corporations not desiring to close their coal gas works have adopted the plan of mixing the two gases, with evident satisfaction to themselves and the consumers. The two local gas companies are supplying this city with a gas consisting of a mixture of carburetted water gas and common coal gas.

The two gases are capable of admixture to make a gas of any intermediate candle power, and will furnish a gas greatly in advance, as far as illuminating effects are concerned, to that of common coal gas.

A perusal of the following tables gives data regarding the vexed question of gas asphyxiation in San Francisco, whether suicidal or accidental. The increase of gas asphyxiation seems apparently to keep pace with the list of total suicides, noting a few exceptions. The table further shows that deaths by accidental asphyxiation have exceeded

deaths by suicidal asphyxiation during the stated twenty-five years, excepting last year.

COMPARISON WITH OTHER CITIES.

COMPARATIVE TABLE OF SUICIDES AND GAS ASPHYXIATIONS FOR NEW YORK, PHILADELPHIA AND SAN FRANCISCO.

1896.	Total Suicides from Various Causes..	Total Gas Asphyxiations.....	Asphyxiations by Accident.....	Asphyxiations by Suicide.....	Percentage of Total Gas Asphyxiations	Percentage of Accidental Asphyxiations.....	Percentage of Suicidal Asphyxiations.....
New York.....	384	90	55	35	23.4	14.3	9.1
Philadelphia.....	133	33	23	10	24.4	17.3	7.5
San Francisco.....	178	62	42	16	34.8	9.0	23.6

Many of these accidental casualties were doubtless due to imperfect gas fixtures, and it should be made incumbent upon the gas companies to make a thorough inspection of the keys to burners before turning on the gas in any building. The keys should not only be in perfect order, but the kind of burner that stops burning when the gas is turned off.

Dr. Strache, in Vienna, refers to the various methods of securing freedom from fatal consequences, such as a self-closing burner, which requires to be warmed by the match before the gas can escape, and which closes by cooling should the gas be blown out accidentally. He also suggests the use of spongy platinum to make self-lighting burners, so that the escaping gas would ignite in flames and thus prevent accidents.

Regarding the mania now in vogue in resorting to gas asphyxiation for committing suicide but little can be said, as common coal gas is as destructive to life as carburetted water gas. It is merely a question of time. Then, again, the avenues open to any one who is determined to end his life are many, and it is commonly a matter of indifference to a person suicidally inclined whether it be illuminating gas or some other agent.

The poisonous action of illuminating gas depends almost entirely upon carbon monoxide which it contains. This gas unites with the haemoglobin of the blood, and thus prevents the supply of oxygen to the various parts of the body. Investigations on the effect of carbon monoxide were made by Dr. John Huldane, and the results published in the "Journal of Physiology," Volume XVIII.

The symptoms produced by carbon monoxide in a healthy and normal individual resemble closely those produced by the atmosphere in which the oxygen tension is considerably diminished by the reduction of atmospheric pressure; in other words, by the reduction of the oxygen percentage. Palpitation, fullness in the head, together with a tendency to impairment of the senses, and loss of power of limbs, are the characteristic symptoms produced both by carbon monoxide and a diminished supply of oxygen in the air breathed. In the earlier stages of carbon monoxide poisoning these symptoms only occur after exertion. It is also characteristic of a moderately-diminished oxygen supply in the blood, as shown by the records of mountain travelers. The experiments further prove that none of these symptoms occur until the blood is saturated to a considerable extent with carbon monoxide, and that both the increase and decrease of the symptoms during and after the inhalation of moderate quantities of the gas run parallel with the changes in the saturation of the blood. In proportion as the saturation increases the symptoms increase; in proportion as the saturation diminishes the symptoms diminish.

As was shown in repeated experiments, the symptoms do not become appreciable until the blood is about one-third saturated, so that the oxygen in the blood is reduced by one-third. Now, this is just what might be expected on the hypothesis that those symptoms are due to the want of oxygen. The symptoms produced by a one-third saturation of the corpuscles with carbon monoxide should therefore correspond to those experienced by mountaineers at an elevation of about 18,000 feet, or by a person breathing air

in which the oxygen percentage is reduced to a pressure of 10.5 inches.

Any proportion of carbon monoxide in air 0.02 per cent. (1-5000) is without action, and a person can inhale such contaminated air for any length of time; 0.045 per cent. (about 1-2000) in air begins to have an appreciable effect, but can be inhaled for four hours without any marked effect. Twenty-one hundredths of 1 per cent. (about 1-500) produce very marked symptoms, and such a mixture when inhaled for about seventy-five minutes will produce strongly marked poisonous effects.

The affinity of carbon monoxide for haemoglobin is about 143 times that of oxygen; it is not oxidized within the body, and cannot be got rid of excepting by displacement by oxygen.

In conclusion I would say that I have used every effort to collect data, but it seems that gas companies, as a rule, are very reticent in giving out information.

SUPPLEMENTAL GAS ANALYSES.

In accordance with the policy of your honorable body analyses of gas supplied to the City have been made from time to time. The analyses are given in full below:

SAMPLES OF

Fifteen samples of honey were analyzed. The tabulated statement shows the adulterant in most cases is glucose, while in two cases plain from the analyses.

Most, if not all, of these honeys were produced in California, and are we are under of fighting internal as well external forces as regards

JELLY.

Nine samples of jelly of different kinds were analyzed, every one of which proved to be pure and as represented.

This certainly shows that the work of the Department in investigating and vigorously prosecuting adulteration of jelly has accomplished a wholesome good in improving the quality of the article in question.

That the improvement is certain is shown by the fact that all of the samples analyzed were of the pack which was put up after the reports on jelly had been presented in March and April of the fiscal year 1896-97.

It is hoped that the improvement during the next year may be even more marked.

JELLY ANALYSES.

Number.	DESCRIPTION OF SAMPLE.	FROM WHOM PURCHASED.	RESULTS OF ANALYSIS.

216	Currant jelly.....	Pure currant jelly.
217	Currant jelly.....	Pure currant jelly.
349	Blackberry jelly.....	Pure blackberry jelly.
350	Raspberry jelly.....	Pure raspberry jelly.
240	Currant jelly.....	Pure currant jelly.
241	Currant jelly.....	Pure currant jelly.
242	Currant jelly.....	Pure currant jelly.
239	Black currant jelly...	Pure currant jelly.

MILK.

One hundred and ninety-seven samples of milk were submitted during the year.

Of this total number 160 samples were taken at the order of the Chief Food Inspector, and were collected during a period of some four or five days. The samples were taken from wagons, milk-stands, hotels and restaurants. Owing to unavoidable delay 33 of the samples soured before they could be tested; of the remaining 127 examined 18, or only 14 per cent., were found below the standard, of 3.2 per cent. of butter fat, adopted by your honorable body.

This is a remarkable showing when it is considered that at the time these samples were taken the milk supply of the City was without inspection other than occasional raids, the Food stations having been closed.

The other samples analyzed were submitted on complaint of private parties. The samples numbered 37. Analysis showed that 16 per cent. of those complained of were below the established standard in butter fat.

In the light of the information given by these analyses it would seem that in the majority of cases adulteration is practiced by the keepers of milk-stands and restaurants, and not by the dairy people themselves.

The fact that 16 per cent. of the complaints received had foundation, and only 14 per cent. of the total taken from all sources were below the standard, would seem to bear out the fact that adulteration was practiced between the dairyman and consumer.

OLIVE OIL.

Fifty-seven samples of oil purchased for olive oil were analyzed during the year. Of the total number of samples of oil examined 33 1-3 per cent. were found to be plain substitutions of other oils for olive oil.

In the fifty-seven samples there were twenty-six different brands of oil, just one-half of which were substitutions.

It is a rather interesting fact that there were no samples which showed the presence of a foreign oil mixed with olive oil, thus showing that the consumer obtains pure olive oil or else an oil which has been substituted wholly for olive oil.

The oil most used in this substitution is cotton seed oil with sometimes a small amount of some rank tasting oil to give an imitation of the true olive oil flavor and at the same time to mask the insipidness of the cottonseed oil.

The question as to the comparative value of olive oil and some of the more common oils which masquerade as olive has been briefly dealt with in one of the monthly reports. It is given below in full:

“Regarding the uses of the fixed oil of mustard and cotton seed oil as articles of food, I beg to say that mustard-seed oil is used largely in India for cooking purposes. It is a yellow, bland oil, having a greenish cast from the presence of chlorophyll, is free from any pungency, and has but little tendency to become rancid. It consists of stearin and olein, together with the glyceride of Erucic acid. What influence the latter may have upon digestion I am not prepared to answer, and neither have I been able to obtain any data as to the amount of this substance present.

“The cotton-seed oil, which is so extensively used as a substitute for olive oil, is also almost exclusively used for preserving sardines, which were formerly immersed in pure

olive oil. Cotton-seed oil does not turn rancid, and its flavor bears some resemblance to linseed oil, and does not bear even remotely any resemblance to the flavor of pure olive oil. Cotton-seed oil consists of olein and palmitin, and resembles in constitution olive oil, which also contains olein and palmitin, with a small percentage of stearin.

“In conclusion, I would offer the suggestion that inasmuch as oil of mustard contains a substance whose physiological action is not known, that this oil should be condemned as an adulteration of cotton-seed oil. And also that in my judgment the cotton-seed should be considered harmless, and as fully digestible as olive oil.”

TEA AND COFFEE.

On account of lack of proper facilities, no chemical or physical analyses of tea and coffee have been made, although some sixteen samples were submitted.

Such disposition as has been made of those samples submitted is shown in the accompanying table:

TEA AND COFFEE ANALYSIS.

No.	DESCRIPTION OF SAMPLE.	FROM WHOM PURCHASED.	REMARKS.
45	Uncolored Japan Tea.....		No facilities for analysis of tea.
73	Black Tea.....		No facilities for analysis of tea.
76	Black Tea.....		No facilities for analysis of tea.
197	Black Tea.....		No facilities for analysis of tea.
198	Black Tea.....		No facilities for analysis of tea.
199	Black Tea.....		No facilities for analysis of tea.
201	Black Tea.....		No facilities for analysis of tea.
202	Black Tea.....		No facilities for analysis of tea.
203	Black Tea.....		No facilities for analysis of tea.
196	Green Tea.....		No facilities for analysis of tea.
210	Green Tea.....		No facilities for analysis of tea.
200	Gunpowder Tea.....		No facilities for analysis of tea.
72	Roasted Coffee.....		Pure.
211	Roasted Coffee.....	House of Correction..	Screenings of coffee.
407	Roasted Coffee.....		Pure.
602	Roasted Coffee.....	Almshouse.....	Costa Rica coffee, inferior grade.

TOXICOLOGICAL ANALYSES.

Fifteen cases of suspected poisoning were investigated. The examinations showed that there was no cause for complaint in a single case. The following is the tabulated statement of the analyses:

TOXICOLOGICAL ANALYSES.

No.	DESCRIPTION OF SAMPLE.	SUBMITTED BY.	RESULT OF ANALYSES.
218	Canned Hominy.....	John Doe.....	No metallic poison.
228	Bread.....	Officer Anderson.....	Contains no poisons.
206	Milk.....	Otto Makowsky.....	Contains no tyro-toxicon.
583	Coffee and Milk.....	Board of Supervisors..	Contains no poisons.
591	Condensed Milk.....	Henry Praugeur.....	Contains no poisons.
595	Butter.....	Henry Holliman.....	Accidental coloring matter.
646	Milk.....	Dr. A. P. O'Brien.....	Contains no tyro-toxicon.
372	Raspberry Jelly.....	De Witt & Co.....	Contains no lead or tin.
138	Fresh Strawberries....	J. P. Dockery	Contains no arsenic.
139	Fresh Strawberries....	J. P. Dockery	Contains no arsenic.
140	Fresh Strawberries....	J. P. Dockery	Contains no arsenic.
141	Fresh Strawberries....	J. P. Dockery	Contains no arsenic.
142	Fresh Strawberries....	J. P. Dockery	Contains no arsenic.
143	Fresh Strawberries....	J. P. Dockery	Contains no arsenic.
144	Fresh Strawberries....	J. P. Dockery	Contains no arsenic.

VINEGAR.

One hundred and nine samples of vinegar of different kinds were analyzed, embracing 45 samples of Cider Vinegar, 56 samples of White Wine Vinegar, 7 samples of Red Wine Vinegar and 1 sample of Malt Vinegar.

Of this total number, 15 samples were found to be as represented, an equivalent of only 13 per cent.

Of the separate kinds, 9 samples of Cider Vinegar or 20 per cent. were found to be Pure Cider Vinegar; 4 samples or 7 per cent. were pure, showing a percentage of 14 in 100. The one sample of Malt found to be pure White Wine Vinegar; 1 sample of Red Wine Vinegar Vinegar was pure.

The bulk of the adulterated samples was found to be made up of matter. Several samples were made from fruit refuse. A few samples

It seems remarkable that a dearth of pure wine vinegar could be such a statement.

The same could be said, but to a smaller extent, in regard to Cider

INVESTIGATION OF THE CITY WATER SUPPLY.

In accordance with the policy and under the direction of your honorable body the water supply from the following sources was thoroughly investigated: Inlet to Laguna Honda Reservoir, University Mound Reservoir, Clarendon Heights Reservoir, College Hill Reservoir, Lombard Street Reservoir, Francisco Street Reservoir.

The tabulated report herewith presented, not only demonstrates the condition of our water supply at the present time, but also shows the beneficial effects of water aeration and filtration to which the water had been subjected. In every instance the amount of albuminoid ammonia will be seen to have been reduced to a remarkable extent when compared with the analysis of the original source of supply. There can be no question of the value of aeration improved by the Water Company. The Chief Engineer states that each reservoir will have aerators and filters supplied where they do not exist, and extended where they are not adequate to carry out their proposed system.

Your attention is also directed to table No. 1, exhibiting comparative analyses of water from reservoirs made for your Board for 1896, with those made the subject of the present report. A casual examination of the report and comparison with the tables will show the manifest advantages of water aeration in the College Hill and Clarendon Heights reservoirs, showing the remarkable reduction of 83 to 84 per cent, in albuminoid ammonia.

The source of the water, the peculiar odor and flavor of which is complained of, is Lake San Andreas, from which, generally late in the Fall, the City's supply is principally obtained. It is the intention of the Chief Engineer to remedy this defect by bringing water from mountain brooks to the lake. This plan, when successfully carried out, if supplemented by thorough aeration, will in my judgment lessen the frequent complaints about bad water. Taken all in all, I can conscientiously assert that the water supply of San Francisco, considered from a chemical standpoint, is wholesome, and is in nowise injurious to health.

SUPPLEMENTAL REPORT ON WATER SUPPLY.

This report embodies a continuation of the sanitary analyses of the water supply of this city. The waters of the lakes from which the reservoirs receive their supplies have been analyzed, and the results are herewith presented to you, amplified with addenda, in order to place prominently before you the value of water aeration and filtration.

The report gives three tables, illustrating the scope of the analyses and its bearing toward the sanitation of our water supply.

Table No. 1 gives the number of the analyses. It gives results of each analysis, calculated to parts in 100,000 parts.

TABLE NO. I.
SANITARY ANALYSES OF WATER CALCULATED TO PARTS IN 100,000 PARTS.

No.	DESCRIPTION OF SAMPLE.	TREATMENT OF SAMPLE.	Free Ammonia.	Albuminoid Ammonia.	Nitrates.	Chlorin as Chlorids.	Oxidizable Organic Matter.	Solids.

642	Golden Gate Park Pump Station....10000	.00400	6.96000	3.43200	29.60000
643	Spring Water from Mill Valley.....001864	.0039	None.	3.77000	1.80000	28.30000

Table No. 2 gives the most important constituents of each water in a sanitary point of view. The analyses of the water from the source of supply and that of the reservoirs are placed side by side for comparison. It will be seen that in two cases out of nine there is a noticeable, and in some cases a large diminution of three important constituents, and in these two cases the increase of ammonia was owing to the oxidation of an equivalent amount of albuminoids.

The table plainly shows the beneficial effects of aeration in effecting the oxidation of nitrogenous organic matter into comparatively innocuous ammonia and carbonic acid, thereby causing a reduction of 33, 66 and 31 per cent. of albuminoid ammonia, and of 33, 66 and 31 per cent. of organic matter.

TABLE No. II.

TABLE SHOWING BENEFICIAL EFFECTS OF WATER AERATION.

RESERVOIR.	Free Ammonia.	Albuminoid Ammonia.	Oxidizable Organic Matter.
Water from Lake San Andreas.....	.001320	.006200	5.000000

Difference.....	+ .000280	-.002040	-3.335000
Water from Crystal Springs.....	.001280	.007560	4.240000
Water from Clarendon Heights.....	.000120	.002520	2.940000
Difference.....	-.001160	-.005040	-1.300000
Water from Crystal Springs.....	.001280	.007560	4.240000
Water from University Mound Reservoir	.002120	.004920	1.800000
Difference.....	+.000840	-.002640	-2.440000

Table No. 3 shows the effects of patent filters, which are placed in restaurants, hotels, and many of the private residences.

This is also a table of comparison, and exhibits that good results may follow by their use, as they not only furnish clear and transparent water, but are also effective for reducing the amount of nitrogenous organic matter to a greater or less extent, according to the kind of filter used. The water obtained at 807 Market street shows an inexplicable amount of organic matter.

TABLE No. III.

TABLE SHOWING RESULTS DERIVED FROM THE USE OF PATENT FILTERS.

RESERVOIR.	Free Ammonia.	Albuminoid Ammonia.	Oxidizable Organic Matter.
Water from Laguna Honda Reservoir....	.000960	.004880	2.600000

Difference.....	-.000536	-.000560	+1.455000

The analyses of water from two wells from the pumping station at Golden Gate Park is also given. This water may be regarded as a purer water than that obtained at this season of the year from the lakes of the Spring Valley Water Co.

MISCELLANEOUS WATER ANALYSES.

Ten samples of water from miscellaneous sources were submitted for analysis during the year.

The disposition made of them is as follows:

CHEMIST'S REPORT.

†Not enough for analyses.

MISCELLANEOUS ANALYSES.

Twenty-six samples of miscellaneous articles have been received and reported on. Most of these samples were of food intended as supplies for public institutions. The results of the analyses are given below. It might be remarked that the food intended for public institutions was of good character throughout:

No.	DESCRIPTION OF SAMPLE.	FROM WHOM PURCHASED.	RESULT OF ANALYSES.
208	Pie grapes.....	No preservatives, put up in cane-sugar syrup.
388	Pie peaches.....	No preservatives, put up in cane-sugar syrup.
389	Tomatoes.....	No preservatives, no coloring.
276	Cove oysters.....	No cause for complaint.
392	Syrup.....	Cane-sugar syrup.
391	Baking powder.....	Cream of tartar baking powder of good strength
393	Cracked wheat.....	Clean and clear, entire wheat.
394	Taploca.....	Pure, clean and clear.
395	Sago.....	Pure, clean and clear.
397	Rice.....	Pure, clean and clear.
398	Zante currants.....	Pure, clean and clear.
399	Beans (dried).....	Pure, clean and clear.
404	Split peas.....	Pure, clean and clear.
408	Vermicelli.....	Pure, clean and clear.
405	Laundry starch.....	Pure corn starch.
406	Corn starch.....	Pure corn starch.
396	Salt.....	Dr. I. W. O'Rourke.....	Pure salt.
248	Crushed barley.....	No cause for complaint.
648	Unknown substance.....	Dr. J. F. Morse.....	Oxalic acid.
555	Pure horse radish.....	Columbia Auction House.	Not fit for human food.
556	Sonoma pickles.....	Columbia Auction House.	Not fit for human food.
585	Leaf tobacco.....	Good grade small l'f tob.
95	Enterprise salmon.....	Mrs. Barker, 255 Athens..	Cans resoldered, contents decomposed.
96	Lime-juice tablets.....	Mr. Deneke.....	Citric acid.
97	Supposed water.....	A. H. Kennison.....	Ditch water.

Respectfully submitted,
 RALPH A. GOULD,
 Acting Chemist.

BACTERIOLOGIST'S REPORT.

San Francisco, July 1st, 1898.

To the Honorable the Board of Health

Of the City and County of San Francisco—

Gentlemen: Herewith I have the honor to submit the tabulated record of the work done in the Bacteriological Laboratory for the fiscal year 1897-98. It is a matter of gratification that the medical profession is apparently of one mind in its appreciation of the aid to diagnosis afforded to it by the Laboratory. We have endeavored to stimulate in the minds of the members of the profession the value of subsequent examination in cases of patients in whose throats the Klebs-Loeffler bacilli have been found, in order that it may be determined as nearly accurately as possible when the bacilli have disappeared from the air-passages, and correspondingly when it may be safe to raise the quarantine in such a case. Although literature has been prepared and distributed, calling the attention of the necessity of such examinations, very few members of the profession seem to realize their importance, judging by the very few who avail themselves of the opportunity. With a view of heightening the efficiency of this Department, and broadening its scope of usefulness, I would respectfully suggest that at some period in the near future a system be inaugurated by which the sputum of individuals suspected of having pulmonary tuberculosis may be examined at the Laboratory; also, that the so-called Widal test be made at the Laboratory, thus enabling Physicians to make an early diagnosis of typhoid fever. With these recommendations it would seem that the Laboratory as at present situated has reached nearly the maximum degree of efficiency to the City's Health Department.

Very respectfully,

JOHN C. SPENCER, M. D.,

City Bacteriologist.

REPORT OF BUREAU OF FOOD INSPECTION.

San Francisco, July 1, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

Gentlemen: I have the honor to submit the following report for the fiscal year ending June 30, 1898:

During the months of July, August, September and October the inspection of Milk proceeded on the same lines as in the preceding year, viz.: at the four Food Inspection Stations, located as follows: Station No. 1, on Clay street wharf, in charge of two Deputy Food Inspectors: the average number of wagons inspected daily at this station was ninety-four; average number of gallons of milk inspected daily 8732. Station No. 2, located at Fourth and Berry streets, in charge of two Deputies: average number of wagons inspected daily 49; average number of gallons of milk inspected daily 2681. Station No. 3, located on Army and Alabama streets, in charge of four Deputies: average number of wagons inspected daily 385; average number of gallons of milk inspected daily 15,266. Station No. 4, located on Geary street and Central avenue, in charge of two Deputies: average number of wagons inspected daily 43; average number of gallons of milk inspected daily 1,052.

In my last annual report I explained the great benefits to be derived from the successful operation of the Food Inspection Stations, the necessity of increasing the facilities of the Bureau of Food Inspection, particularly the Laboratory, the carrying on of the tuberculin test amongst the numerous dairy herds in this county, and the absolute necessity of having an Assistant Attorney connected with the department. To further those ends I submitted a state-

ment, designating the amount of money required to successfully carry on the work as outlined by your honorable body. The Honorable Board of Supervisors, however, did see fit to accede to your request in this matter, and as a result the annual appropriation was inadequate for the continuance of this system of inspection. Consequently on November 1st the Food Inspection Stations were abolished, all Deputy Food Inspectors dismissed and the administering of the tuberculin test brought to an end. The result of this retrenchment was that the department was crippled, and the many beneficial movements under way had to be abandoned.

I have at various times pointed out the crying need of a special attorney for the department, in line with the experience and practice of all progressive cities of the union, to the end that all offenders against the Pure Food Laws would be properly prosecuted, for without the assistance of such an official it would be useless to expect effective work. The importance of such legal assistance is practically and fully demonstrated from the fact that during the month of December eighteen warrants were sworn to for the arrest of merchants who had sold adulterated Olive oil. The cases were called in Judge Campbell's Court, and on account of an error in drawing the complaints the same were set aside, with instructions to have proper complaints filed. I reported the matter to the Health Officer, and was instructed to communicate with Assistant District Attorney Joseph J. Dunne, who had kindly volunteered to assist the Health Department whenever his time would permit. Owing to Mr. Dunne's unavoidable absence from the city I was unable to consult him. Immediately on his return, however, I explained the exact status of the cases to him, and he informed me that it would be advisable not to proceed with any of those cases until such time as a decision would be rendered in the Hartter and Feusier cases, said cases having been appealed to the Superior Court.

On June 15th I was instructed to proceed immediately

with the prosecution of the Adulterated Olive Oil cases. Assistant District Attorney Joseph J. Dunne drew up proper complaints for the arrest of eight dealers, the same were sworn to before Police Judge C. T. Conlan. Shortly after his Honor informed the Health Officer that the cases were outlawed, and hence he could not issue warrants for the arrest of merchants in these particular cases. His Honor also stated that as these same parties were arrested before, and the complaints were defective they could not be again arrested for the same offense. In the month of March, Superior Judges Wallace, Cook and Dunne, sitting in banc, rendered a decision, which upon imperfect appreciation seemed to be pregnant with embarrassment for the Health Department; but the embarrassment, fortunately, was dissipated upon a clearer understanding of the decision. Subsequently, upon the appeals of the Hartter and Feusier cases, Assistant District Attorney Dunne made the following argument:

IN THE SUPERIOR COURT OF THE STATE OF CALIFORNIA, IN
AND FOR THE CITY AND COUNTY OF SAN FRANCISCO.

THE PEOPLE OF THE STATE OF CALI- FORNIA, VS. LOUIS HARTTER.	}	1035
--	---	------

THE PEOPLE OF THE STATE OF CALI- FORNIA, VS. LOUIS FEUSIER.	}	1033
--	---	------

BRIEF FOR THE PEOPLE IN REPLY—PURE FOOD CASES.

I observe from the printed brief herein that some misconception exists in the mind of counsel concerning the number of defendants involved. He describes this case as "People of the State of California vs. Six Defendants"; but there are not, however, any other defendants before the Court than those whose names appear in the caption of this brief. The cases of sundry other defendants, which have

heretofore been pending in this Court, have been disposed of by the Court in one way or another, leaving only the Harter and Feusier cases undisposed of. Inasmuch as this is not a moot Court, I shall not criticise cases not pending before the Court, but shall confine my remarks to the Harter and Feusier cases only.

JURISDICTION.

This prosecution was had under the statute of March 26th, 1895; and that this act is within the police power of the Legislature, and is constitutional, there can be no question. Health being the *sine qua non* of all personal enjoyment, it is not only the right, but also the duty of the State to pass such laws as may be necessary for the preservation of the health of the people.

(Powell vs. Com., 114 Pa. St., 294; s. c. 127 U. S., 678; People vs. Cipperly, 37 Hun., 324, decided in Court of Appeals, upon the grounds stated in the dissenting opinion of Learned, J., in the court below, 101 N. Y., 634; State vs. Groves, 2 Atl. Rep (R. I.), 784; State vs. Smith, 14 R. I. 100; s. c. 51 Am. Rep., 344; Con vs. Evans, 132 Mass., 11; Con vs. Smith, 130 Mass., 444; Com. vs. Wentworth, 118 Mass., 441; State vs. Newton, 45 N. J. L., 469; s. c. 50 N. J. L., 534; Pierce vs. State, 63 Md., 592; Butler vs. Chambers, 36 Minn., 69; State vs. Addington, 12 Mo. App., 214; s. c. 77, Mo., 117; Phillip vs. Lee, 75 Ill., 334; Bainbridge vs. State, 30 Ohio St., 264; United States vs. Bayaud, 16 Fed Rep., 384; State vs. Campbell, 64 N. H., 402; People vs. West, 44 Hun., 162; s. c. 106 N. Y., 296; State vs. Aronsberg, 105 N. Y., 123; s. c. 59 Am. Rep., 483.)

With reference to the Marx case, decided in 99 N. Y., 377, I may be permitted to suggest that the statute there was held void, because instead of being designed to suppress adulteration, its object was to prohibit one industry in order to foster another.

It is claimed, however, that under the text of Section 5 of the California statute, a Police Court, upon a judgment of conviction, under the act, may impose a penalty greatly in excess of the jurisdiction of the Court; but it must be pointed out that Section 5 of the Pure Food Act establishes a well-marked distinction between the penalty proper and the "necessary costs and expenses" incidental to prosecutions under the act. I presume that no serious contest will be made of the proposition that costs and expenses are the necessary disbursements incurred by the parties in the prosecution or defense of an action or process at law and in equity; and that they form no part of the relief sought, but are a mere incident of the judgment, and when not included in it are lost.

(4 Am. & Eng. Ency. of Law, 313; 5 Ency. of Pl. & Pr., 109.)

The distinction, I submit, between a penalty on the one hand and

costs upon the other is so well defined by the language of this statute that any additional discussion of that distinction would be supererogatory. And if there is a proposition well settled in the law of jurisdiction, it is that costs are never considered in determining jurisdiction.

(*Watson vs. Ward*, 27 Minn., 29; 12 Am. & Eng. Ency., 284; *Gray vs. Dougherty*, 25 Cal., 266; *Votern vs. Reese*, 20 Id., 89; *Bradley vs. Kent*, 22 Id., 169; *Skillman vs. Lachman*, 23 Id., 199; *Bolton vs. Landers*, 27 Id., 106; *Mansfield vs. Johnson*, 30 Id., 545; *Greenbaum vs. Martinez*, 86 Id., 456.)

It would, indeed, shock the legal mind to be compelled to measure jurisdiction by a merely collateral and purely incidental feature like costs and expenses; and it would seem, reasoning from the analogies of the law in kindred cases, that the test of jurisdiction should be the substantial penalty attached to the violation of the statute, and not mere costs and expenses, which are collateral and incidental. I submit, therefore, that the jurisdiction of the Police Court is to be measured and determined by the penalty attached to a violation of the act, and not by the cost of the analysis; and when the jurisdiction of the Police Court is tested by this standard, it is plain that the judgment attacked here is clearly within the jurisdiction of the Court.

This objection is not a new one. In the case of one of these very defendants, Louis Harter, upon habeas corpus, before Judge Seawell, after conviction in the Police Court, this precise point was presented, but on the 19th of April, 1897, Judge Seawell, in Department One of this Court, failed to perceive any merit whatever in the suggestion, and remanded the petitioner. Harter was not satisfied with the judgment of Judge Seawell, and, four days later, applied to the Supreme Court for a writ of habeas corpus, and, on the, 23d day of April, 1897, by the Supreme Court in bank, the writ was denied, the Court holding that "for the purpose of determining the jurisdiction, the costs recoverable are not to be deemed a part of the penalty." It is respectfully submitted, therefore, that there is no merit in this objection to the jurisdiction of the Court.

CHANGE OF PLACE OF TRIAL.

It appears from the transcripts in these two cases that the defendants filed affidavits alleging bias upon the part of the Judge of the Police Court, and asking for a transfer of the case to another department of that Court. The Judge of the Court below filed a counter affidavit repudiating any bias upon his part against these defendants or either of them, and denied the motion to transfer the cause; and this denial is now urged as a reason why these judgments should be reversed. It is to be hoped that this Court will give such

an authoritative construction of the sections of the Penal Code involved as will remove ambiguity in future cases. I have been given to understand that conflicting decisions upon this matter have been rendered by various members of the Superior Court; that Judge Hunt, in Department Five, took one view of the matter, favorable to the action of the Court below, and that Judge Murphy, in another department of this Court, held views distinctly unfavorable to the action of the Court below. And in this condition of things it will be perceived that an authoritative construction of the sections of the Penal Code involved will be of lasting value to those charged with the administration of criminal law. For the assistance of the Court in construing the sections of the Penal Code, I beg leave to cite the following authorities:

(C. C. P., Secs. 397-833; Penal Code, Secs. 1431, 1033, 1034, 1035; *Lowry vs. Hoge*, 85 Cal., 602; *People vs. Hubbard.*, 22 Id., 37; *Freligh vs. State*, 8 Mo., 611; *Manley vs. State*, 52 Ind., 163; *Mershon vs. State*, 44 Id., 598; *Krutz vs. Griffith*, 68 Id., 444; *Schmelzer vs. Lochart*, 97 Id., 321; *Krutz vs. Howard*, 70 Ind., 174; *Walch vs. Ray*, 37 Ill., 30; *Parsons vs. People*, 113 Id., 557; *Cantwell vs. People*, 28 N. E. Rep., 964; *State vs. Henning*, 54 N. W. Rep., 536; *People vs. Maloney*, 18 Cal., 180; *People vs. Williams*, 24 Id., 31; *People vs. Shuler*, 28 Id., 490; *People vs. Lee*, 5 Id., 354; *Krundick vs. Krump*, 98 Id., 119; *People vs. District Court*, 17 Id., 547; *People vs. Bell*, 4 Id., 179; *McCauley vs. Brooks*, 16 Id., 1; *High, Extraordinary Remedies*, Sec. 34; *Wood vs. Strother* 76 Cal., 543; *State vs. Johnson*, 4 Wallace, 489; *Mining Co. vs. Kaiser*, 58 Cal., 324; *People vs. Yoakum*, 53 Id., 571; *Ex parte Wright*, Criminal, No. 377, Dec. 21st, 1897.)

VARIANCE.

It is contended, with a certain seductive appearance of seriousness, that in these two cases there is a fatal variance between the complaint and the proof. The complaint in the Harter case alleged that although Thomas Taylor endeavored to purchase an article of food called "currant jelly," still the composition that was sold to him was a substance which was only an imitation of currant jelly, and contained apple jelly mixed with glucose, and colored with coal tar coloring. Such being the allegation in the complaint, the proof showed, on the direct examination of Professor Wenzell, the chemist, that he analyzed the exhibit, and found that it was not currant jelly, and further testified, on redirect examination, that the exhibit was made from apple jelly, and contained a large proportion of glucose, with cane sugar, and was colored with coal tar coloring. In the other case, of Feusier, the complaint alleged that Taylor, the complaining

witness, endeavored to purchase currant jelly, an article of food, but was sold instead a composition which was not currant jelly, but a mere imitation thereof, and contained apple jelly, mixed with starch paste, containing acetic acid, and colored with aniline dye. The proof showed that Professor Wenzell, the chemist, made an analysis of the exhibit, and that the analysis showed that: "It is made from apple jelly, starch and acetic acid; it does not contain sugar, and is not "currant jelly." Certainly it is confidently submitted that mortal man can discover no variance between the allegations of the pleadings and the proofs offered under them in these cases.

(See *United States vs. Moore*, 11 Fed. Rep., 248; *White vs. State*, 60 Ind., 273; *State vs. Brinn*, 30 Minn., 522; *People vs. Armstrong*, 114 Cal., 570; *People vs. Mayne*, 114 Id., 632; *Com. vs. Bulman*, 118 Mass., 456; *Com. vs. McGaughey*, 9 Gray (Mass.), 296; *State vs. Mayne*, 31 Conn., 572.)

RECORDS OF CORPORATION.

Under the heading that "Records of corporation are the best evidence of its acts," appellants' counsel argue that "the Court erred in "admitting parol evidence to show that the defendant was an officer "of the corporation." I have diligently examined the statements on appeal in these cases of *Harter and Feusier*, and fail to find any sentence, word, or syllable to justify either the position assumed here, or the reversal of either of these judgments upon any such ground.

CRIMINAL LIABILITY OF PRINCIPAL FOR THE ACT OF HIS AGENT.

It is a matter of common knowledge that clerks and salesmen are employed in most shops where goods are sold. They are employed knowingly and intentionally by the proprietor of the store for the specific purpose of selling to customers the goods contained within the store. So far as the sale of the goods is concerned, these clerks and salesmen are the proprietor, and by force of all rules of civil law, their acts are the acts of the proprietor. Under most elementary principles in the law of agency, their acts, within the scope of their employment, bind their principals, and their principals become charged with civil responsibility for the consequences of their acts. This is a rational principle, and one founded on the plainest kind of good sense; but, when we seek to apply this common sense principle to a case of criminal, as distinguished from civil, responsibility, we are told that the principal no longer is responsible for the acts of the man whom he employs for the specific purpose of selling goods, and,

in this case, of selling adulterated goods, of whose character the law will not permit the principal to remain ignorant. If it is to be said that the principle which charges the proprietor with responsibility for the acts of his *alter ego* has no application to a criminal prosecution under this statute, then, in many instances, will the statute be shorn of its usefulness. I am perfectly frank to say that in a case where a proprietor specifically employs a salesman for the express purpose of selling goods, I am utterly unable to see why the proprietor, whose act puts that salesman in the position to sell those goods, should not be chargeable with all the consequences, civil and criminal, which flow from such conduct, for a person always intends the ordinary consequences of his voluntary act. (P. C., Sec. 1102; C. C. P., Sec. 196, Subd. 3.) It is urged that the reason why the elementary rule, *qui facit per alium facit per se*, fails of application to a criminal prosecution of this character is because criminal intention is an essential element in this offense. In other words, eliminate the idea of criminal intent from the problem presented, and no reason any longer exists why the principal should not be chargeable with the consequences flowing from his representative's act. The ground taken in counsel's brief proceeds upon this theory, and, in express terms, counsel urges that the reason why the act of the salesman does not bind his principal is because criminal intent is an essential element in the offense charged in this complaint. I shall, hereafter, show that the foundation for this contention has no existence in law, and that the precise reason urged to escape responsibility herein, and to furnish a medium for the distribution of fraudulent and adulterated compounds upon the community, has been repudiated by very respectable Courts. The better opinion seems to be, and, indeed, the accepted opinion in adulterated food cases is, that the servant, agent, or salesman who, in the course of his employment, sells an adulterated article, renders his master liable, for the precise reason that a criminal intent on the part of the master is not necessary under this statute.

(Com. vs. Warren, 160 Mass., 533; Com. vs. Proctor, 165 Id., 78; Bissman vs. State, 9 Ohio C. C., 714.)

Under this last case, the Ohio Court used the following significant language: "The person who has imposed upon him the general management, direction, and control of the business of an incorporated company in respect of its business conduct, stands for the corporation, and is its only visible, active, tangible head. Such person is, in that respect, the principal in the conduct of its business, and all those who act on his procurement and under his directions are, in the full sense, his agents or aids in transacting the business of the company. It is elementary that 'whatever an agent does within the

“scope of his authority, is, in legal effect, the act of the principal, “who is entitled to its advantages and subject to its liabilities.’ This “is the doctrine of the civil law, and it also obtains in the criminal “practice. A very familiar principle of the criminal law is that, “where a criminal act is committed by one person upon the pro- “curement of another, both the procurer and the procured are guilty “as principals.’ ‘All who aid or participate in the commission of a “misdemeanor are principals.’ ‘Whoever aids, abets, or procures “another to commit any offense may be prosecuted and punished as “if he were the principal offender.’ From all this it is quite certain “that, in law, the plaintiff in error, Bissman, as principal, is respons- “ible and liable for the act done by his agent, and if an offense has “been committed by the sale of the article of food named, the plain- “tiff in error is guilty of the offense as a principal party.”

(See, also, Cal. Penal Code, Secs. 31-659; *Smith vs. State*, 21 Tex. App., 96.)

CRIMINAL INTENT.

In these cases in the Court below the element of criminal intent was deliberately, and of malice prepense, charged out of the case; and of this action the appellants herein now complain. This is the most important question in the cause, as must be manifested from the consideration that, should the State be required to establish criminal intent in this class of cases, the efficiency of the statute in question would be utterly destroyed.

To quite a considerable extent, the question presented is one of statutory construction. The old doctrine of the common law was that penal statutes should be strictly construed; but this somewhat narrow rule has given place to the more rational theory by which penal statutes are to be so construed as to effect the purposes of their enactment, and to subserve the ends of justice. In the statute with which we are confronted, there is not even a dim intimation that knowledge or guilty intent upon the part of the seller of adulterated goods is made a part of the offense. The statute provides that no person shall manufacture, sell, or offer for sale any adulterated article of food, and that is all that it says; the word “knowingly” nowhere appears in this statute; there are here no words of limitation, nor are there here any terms of qualification; and appellant cannot within the rule of statutory construction established in this State by Sections 1858-9 of the Code of Civil Procedure, be countenanced in his attempt to read into this plain, unqualified statute any words of limitation or qualification, predicated upon ideas of criminal intent or guilty knowledge. This view is somewhat emphasized by the language used in an early case in the State of New York:

"The act which gives the penalty sued for only subjects him who shall *knowingly* sell, supply, or bring to be manufactured to any cheese factory, diluted, adulterated or skimmed milk. It is not the act of selling, supplying, or bringing to the factory the milk condemned by the law that gives the penalty. If so, it would be immaterial whether the owner and proprietor sold or bought the milk in person or by his servants, or the agency of third persons. The act might be regarded as the act of the principal and he be made liable, although done without his personal knowledge or intervention. Davis vs. Bemis (40 New York, 453, note) may be conceded to have been well cited. But the word 'knowingly' in the statute now under review qualifies the acts condemned, and only makes the offense penal when committed by the authority or with the knowledge and assent of the party sought to be charged. The act designedly distinguishes between actual and constructive participation in and assent to the wrongful act, and between actual or personal, and imputed or constructed notice or knowledge of facts constituting the offense. The intent of the act is to punish an individual only for an actual and intentional violation of its provisions. The act need not be personally committed by the party charged, but if authorized by him he is liable for the penalty. Effect cannot be given to the act in its present form unless it is thus restricted in its application and operation. Upon any other interpretation, the word 'knowingly' is of no effect, and has no meaning."

(Verona Cheese Company vs. Murtaugh, 50 N. Y., 317.)

Upon the same page the Court proceeds, by way of *obiter dictum*, to say:

"It can hardly be claimed that one would be liable for a penalty under a statute like this, even without the word 'knowingly,' or other like qualifications for delivering, by mistake and in good faith, milk within the condemnations, but of which neither he nor any person in his employ has any knowledge; that which might have become diluted or adulterated by accident, or by the malicious acts of strangers."

This last remark of the Court was, of course, wholly unnecessary to the decision of the cause then pending, and was the merest *obiter dictum*; and, moreover, as I shall hereafter show, the suggestion conveyed in this last remark has been expressly repudiated in later and better considered cases in the same Court, arising under statutes from which the obnoxious word "knowingly" had been eliminated. But the point I wish to impress at present upon the Court is that the use of the word "knowingly" in a statute of this character does introduce a most prominent qualification of the proof essential to a conviction; and that the absence of that word, as in the statute now

under consideration, is not to be supplied by the specious ingenuities of counsel. Had the word "knowingly" been written into this act by the Legislature, as the Legislature could easily have done, we should have been confronted by a somewhat different problem; but the Legislature has not seen fit to insert that term into the definition of the offense, and its silence in this behalf is pregnant with significance.

It must be remembered that crime, whether of the grade of felony or of misdemeanor, is a resultant, a product. It springs from the union or marriage of two elements—one, objective, the overt act; and the other, subjective, the intent or mental condition. Hence arises the well known maxim: "*Actus non facit reum, nisi mens sit rea.*" This is a general doctrine in all criminal jurisprudences which derive their origin from the common law, and not even the hardihood of counsel will justify the assertion that the doctrine of "*Mens rea*" is peculiar to California. This doctrine has a prominent place in the criminal jurisprudence of Great Britain and of all of the States of this Union, and I shall hereafter cite no case which does not come from a State recognizing, adopting, and enforcing this fundamental principle of all criminal law. But, well recognized as this doctrine is, there are equally well recognized exceptions to it, a few of which I shall take occasion briefly to advert to. In a recent case in the State of Nevada, the Court lays down the principle that where a statute forbids the doing of a certain thing and is silent concerning the intent with which it is done, a person who does the forbidden act is not guiltless because he has no wrongful intent beyond that which is involved in the doing of the prohibited act. The Court illuminates the principle by a number of illustrations taken from different States in the Union, and cites a number of authorities upon this question.

(State vs. Zichfeld, 46 Pac. Rep., 802.)

And in a very well-reasoned case the Circuit Court of the United States, for the Southern District of New York, considered this question. The statute in that case provided that "Every person
"who removes any stamp provided by law from any cask or package
"containing, or which has contained, distilled spirits, without de-
"facing and destroying the same at the time of such removal, or who
"aids or assists therein shall be deemed guilty of felony." Upon motion in arrest of judgment, the Court, Wallace, Benedict and Brown, JJ., sitting, used the following significant language:

"It is next objected that the indictment is fatally defective because
"it omits to allege that the accused knew that the casks contained
"distilled spirits. In regard to this point, it is first to be remarked
"that it depends upon the proper construction to be given the statute
"above quoted. Looking at the words employed as indicating the in-

“tent of the law, it is seen that the statute mentions certain ingredi-
“ents as necessary to constitute the offense, and makes no allusions
“to knowledge that the casks contained or had contained distilled
“spirits. It would have been so easy and so natural to have desig-
“nated such knowledge among the other ingredients, if it had been
“intended to make such knowledge an ingredient of the offense, that
“the omission of any expression to that effect goes far of itself, con-
“sidering the object of the statute (see, *A Quantity of Distilled*
“*Spirits*, 3 Ben., 558), to repel the presumption of such an intention.
“The argument in support of such a presumption assumes that
“knowledge of the contents of the casks must be proved in order to
“render the act of removing stamps punishable as a crime. But no
“such assumption can be indulged in. Statutory crimes where knowl-
“edge or intent are not ingredients of the offense are common. The
“rule applied in such cases is that where a statute forbids the doing
“of a certain act under certain circumstances without reference to
“knowledge or intent, any person doing the act mentioned is charged
“with the duty to see that the circumstances attending this act are
“such as to make it lawful; and under such statutes a conviction may
“be had upon proof of doing the forbidden act, without proof of
“knowledge by the accused of the circumstances specified in the
“statute. The books contain many cases where such a rule has been
“applied. For instance, *Barnes vs. State*, 19 Conn., 399, where the act
“charged was selling liquor to a common drunkard, in which case the
“Court refers to cases of enticing a female under twenty-one years of
“age, and of adultery (see *Fox vs. State*, 3 Tex. Ct. App., 329), as
“within the rule; *Com. vs. Waite*, 5 Mass., 264, where the act charged
“was selling adulterated milk; 2 *Allen*, 160, where selling liquor that
“was intoxicating was the offense; *State vs. Heck*, 23 Minn., 549,
“where selling liquor to an habitual drunkard was charged; 1 *Rus-*
“*sell, Crimes* 93, where the crime charged is inducing a soldier to de-
“sert; *Reg. vs. Robbins*, 1 Car. & K., 456, where the crime was ab-
“ducting an unmarried girl under sixteen years of age. Also, *Reg.*
“*vs. Olifier*, 10 Cox C. C., 402; *Fitzpatrick vs. Kelly*, L. R. 8 Q. B., 337,
“where the charge was selling adulterated butter; *Reg. vs. Woodrow*,
“15 *Mees & Wellsby*, 404, where the offense was having in possession
“adulterated tobacco, and where it was found as a fact that the ac-
“cused believed the tobacco to be unadulterated. See, also, *Halsted*
“*vs. State*, 12 *Vroom*, 552. In all these cases a point similar to the
“one under consideration was made without avail. No reason has
“been suggested why the rule above stated should not be applied in
“the present case. By the statute under consideration, a certain act
“is made criminal when done under certain circumstances without
“reference to knowledge or intent. . . . In such a case a convic-

"tion may be had without charging in the indictment knowledge of
 "the contents of the casks, for the statute bound the accused to know
 "the facts and to obey the law at their peril."

(U. S. vs. Bayaud, 16 Fed Rep., 384-5.)

Probably the Supreme Court of Pennsylvania stands as high in the estimation of the profession as any of the Courts in this country, and its views upon this question are entitled to the highest respect. In 1889, one Weiss was convicted and fined under a statute punishing every person "Who shall manufacture, sell, or offer or expose for "sale, or have in his . . . possession with intent to sell" oleomargarine. At the trial the testimony on behalf of the commonwealth tended to prove that on Feb. 4th, 1889, George Spence ordered and ate a meal at a restaurant kept by the defendant, paying therefor fifty cents; that he was served as a part of said meal with a substance resembling butter, which he retained and carried away with him, and that upon an analysis thereof the "substance" proved to be oleomargarine with evidence of cottonseed oil.

One of the witnesses for the commonwealth testified that one day prior to Feb. 4th, 1889, he saw a waiter in the employ of the defendant throw out of the doorway of the restaurant an empty oleomargarine package. The defendant's case consisted of the admission that the defendant, if in Court, would testify that he did not knowingly furnish or authorize to be furnished to any of his customers any oleomargarine, but, so far as he knew, furnished genuine butter; this fact to be regarded for the purposes of this case as having been testified to by him before the jury. Upon appeal the Supreme Court said: "Guilty knowledge or guilty intent is in general "an essential element in crimes at common law, but statutes providing police regulations in many cases make certain acts penal, where "this element is wholly disregarded. The distinction is thus laid "down in 3 Greenl. Ev., Sec. 21: 'The rule (i. e., that ignorance of "fact will excuse) would seem to hold good in all cases where the "act, if done knowingly, would be *malum in se*, but, where a statute "commands that an act be done or omitted, which in the absence "of such statute might have been done or omitted without culpability, ignorance of the fact or state of things contemplated by the "statute, it seems, will not excuse its violation. Thus, for example, "where the law enacts the forfeiture of a ship having smuggled "goods on board, and such goods are secreted on board by some of "the crew, the owners and officers being alike innocently ignorant "of the fact, yet the forfeiture is incurred notwithstanding their "ignorance. Such is also the case in regard to many other fiscal, "police, and other laws and regulations, for the mere violation of "which, irrespective of the motives or knowledge of the party, cer-

“tain penalties are enacted; for the law in these cases seems to
 “bind the parties to know the facts and to obey the law at their
 “peril.’ To the same effect also is Wharton, Crim. Law, Secs. 83,
 “2442.

“Whether a criminal intent or a guilty knowledge is a necessary
 “ingredient of a statutory offense, therefore, is a matter of construc-
 “tion. It is for the Legislature to determine whether the public in-
 “jury, threatened in any particular matter, is such and so great as to
 “justify an absolute and indiscriminate prohibition. Even if, in the
 “honest prosecution of any particular trade or business, conducted
 “for the manufacture of articles of food, the product is healthful and
 “nutritious, yet, if the opportunities for fraud and adulteration are
 “such as threaten the public health, it is undoubtedly in the power of
 “the Legislature either to punish those who knowingly traffic in the
 “fraudulent article, or, by a sweeping provision to that effect, to pro-
 “hibit the manufacture and sale altogether. The question for us to
 “decide, therefore, is whether or not, from the language of the statute
 “and in view of the manifest purpose and design of the same, the
 “Legislature intended that the legality or illegality of the sale should
 “depend upon the ignorance or knowledge of the party charged. The
 “statute in question was an exercise of the police power, and the act
 “was sustained upon this ground not only in this Court but also in
 “the Supreme Court of the United States: *Powell vs. Commonwealth*,
 “114 Pa., 265; *Powell vs. Pa.*, 127 U. S., 678. The prohibition is abso-
 “lute and general; it could not be expressed in terms more explicit
 “and comprehensive. The statutory definition of the offense em-
 “braces no word implying that the forbidden act shall be done know-
 “ingly or willfully, and, if it did, the design and purpose of the act
 “would be practically defeated. The intention of the Legislature is
 “plain, that persons engaged in the traffic shall engage in it at their
 “peril, and that they cannot set up their ignorance of the nature and
 “qualities of the commodities they sell as a defense..”

The Court then proceeds to refer to numerous authorities, and
 closes the opinion by saying: “This ignorance is not a sufficient ex-
 “cuse or justification under the act of assembly. If such a defense
 “could be successfully interposed in such cases, there would be few
 “convictions, and the law would be nullified for all practical pur-
 “poses.” The judgment below was affirmed.

Commonwealth vs. Weiss, 139 Pa. St., 247.

That this same doctrine obtains in Great Britain, see *Fitzpatrick vs. Kelly*, L. R. 8 Q. B. Cases, 337.

Further illustrations of the general principle of statutory construction involved herein may be grouped as follows:

Adultery Cases: without allegation or proof that the defendant knew the woman to be married.

Com. vs. Elwell, 2 Metc., 190.

Bigamy Cases: although the defendant makes diligent inquiry, and after reasonable efforts to inform herself, does believe that her first husband is dead.

Com. vs. Marsh, 7 Metc., 472; Shaw, C. J.

Minor Cases: admitting minors to a billiard-room, although defendant believed the minors to be of full age.

Com. vs. Emmons, 98 Mass., 6.

Adulterated Liquor Cases: although defendant did not know them to be adulterated.

Com. vs. Boynton, 2 Allen, 160; Barnes vs. State, 19 Conn., 397; Com. vs. Hallett, 103 Mass., 452; Com. vs. Goodwin, 97 Mass., 117; King vs. State, 6 So. (Miss.), 188; State vs. Hatfield, 24 Wis., 60; Com. vs. O'Keene, 152 Mass., 584; Altshul vs. State, 8 Ohio C. C., 214.

Procuring Cases: In California, in prosecutions for procuring, ignorance of the age of the female is no defense whatever.

People vs. Dolan, 96 Cal., 315; People vs. Fowler, 88 Cal., 136.

The general principle that a person may be convicted of selling adulterated food without allegation or proof that he knew it to adulterated is amply sustained by the highest kind of authority.

Com. vs. Evans, 132 Mass., 11; Com. vs. Wentworth, 118 Mass., 441; State vs. Addington, 12 Mo. App., 214; State vs. Newton, 50 N. J. L., 536; People vs. Snowberger, 71 N. W. (Mich.), 497; State vs. Smith, 10 R. I., 260; Com. vs. Raymond, 97 Mass., 568; People vs. West, 106 N. Y., 286; Bissman vs. State, 9 Ohio C. C., 714; United States vs. Bayaud, 16 Fed Rep., 384-5; People vs. Mahaney, 41 Hun., 26; People vs. Shaffer, 41 Hun., 23; People vs. Kibler, 106 N. Y., 322; People vs. Eddy, 12 N. Y. Supp., 628; Com. vs. Smith, 103 Mass., 444; Com. vs. Farron, 9 Allen, 489; Com. vs. Nichols, 10 Allen, 199; Com. vs. Wright, 11 Allen, 264; People vs. Zeigler, 6 Park C. Rep., 355; Powell vs. Com., 114 Pa. St., 294; affirmed, 127 U. S., 678.

Ignorance of the fact is no defense whatever in this class of cases; defendants are bound at their peril to ascertain the nature of the articles which they sell.

Com. vs. Boynton, 84 Mass., 160; Authorities, cited supra.

Criminal intent forms no element of the offense; nor is it necessary to show fraudulent intent. In this class of cases it is only

necessary to show, first, the fact of sale, and second, the fact of adulteration within the meaning of the act.

In a case cited above from the Court of Appeals of New York it was said by Finch, J.:

"The appellant was convicted of selling adulterated milk under the provisions of Chapter 183 of the Laws of 1885, as amended by Chapter 458 of that year. Section 1 provides that 'no person or persons shall sell or exchange or expose for sale or exchange any unclean, impure, unhealthy, adulterated or unwholesome milk.' It was proved that one Vandenburg, on Aug. 25, 1885, purchased at defendant's store one pint of milk, which was shown, by a chemical analysis, to have contained 89.04 per cent. of fluids and 7.78 per cent. of milk solids, and so, falling below the standard fixed by the act, came within its definition of adulterated milk. There was no dispute about these facts, but the contention of the defendant is that he was not allowed to show an absence of criminal intent, or go to the jury on the question whether it existed, but was condemned under a charge which made his intent totally immaterial, and his guilt consisted in having sold the adulterated article whether he knew it or not, and however carefully he had sought to keep on hand and sell the genuine article. As the law stands, knowledge or intention forms no element of the offense. The act alone, irrespective of its notice, constitutes the crime. That conclusion was necessarily involved in our decision of *People vs. Cipperly* (101 N. Y., 634; 37 Hun., 323). On the trial of that case, the question was directly presented. . . . There remains no reasonable doubt of the legislative meaning, and the constitutional power to so enact we have distinctly affirmed. The prudence of its exercise may be debatable, but it is not indefensible. It is notorious that the adulteration of food products has grown to proportions so enormous as to menace the health and safety of the people. Ingenuity keeps pace with greed, and the careless and heedless consumers are exposed to increasing perils. To redress such evils is a plain duty but a difficult task. Experience has taught the lesson that repressive measures which depend for their efficiency upon proof of the dealer's knowledge and of his intent to deceive and defraud are of little use, and rarely accomplish their purpose. Such an emergency may justify legislation which throws upon the seller the entire responsibility of the purity and soundness of what he sells, and compels him to know and to be certain. We see no reason to change our ruling either as to the construction of the act or its constitutionality."

People vs. Kibler, 106 N. Y., 322.

And in a later case in the same State, after referring to antecedent decisions, the Court said:

"In the case of *People vs. Cipperly*, 37 Hun., 324, it was held, by a majority of the general term in the Third Department, that to convict and punish a man for crime without proof of guilty knowledge or criminal intent, upon evidence arbitrarily prescribed, purely technical in character, and incapable of refutation by the ordinary modes of contradiction, was to deprive him of liberty or property without due process of law. But the learned presiding Judge of that court held otherwise, and the dissenting opinion by which he upheld his views was adopted by the Court of Last Resort as a correct exposition of the law. (*People vs. Cipperley*, 101 N. Y., 634.) These decisions are conclusive upon all the real questions in this case. Under the law as thus settled all the evidence given or offered by the defendant showing or tending to show that he neither knew nor had reason to suspect that the milk sold by him was of less than standard quality; that it was, in fact, absolutely pure, and as it came from the udders of his cows; that his cows had been carefully selected, were in perfect health, cleanly kept, and well and properly fed; all the evidence tending to show and which the jury, if the question might have been submitted to them, would probably have found, that the fraction of a few hundreds of 1 per cent by which the milk fell below the statutory standard was due to the rapid and watery growth of the grass in a season of almost constant rains—all this evidence was entirely unavailing to the defendant."

(*People vs. Eddy*, 12 N. Y. Supp., 628; *State vs. Campbell*, 64 N. H., 402; authorities cited supra.)

The Supreme Court of New Jersey speaks on this subject with a distinctness which, I apprehend, must be painful to counsel on the other side. The Court said:

"Another objection is that it was neither averred nor approved below that the plaintiff in certiorari knew that the oleomargarine was colored with annatto, and without such knowledge he could not, it is urged, be guilty of a penal act. In *Halsted vs. State*, 12 Vroom., 552, the Court of Errors laid down the principle that, in regard to statutory offenses, the defendant's knowledge of all the physical facts which go to constitute the offense is not essential to guilt, unless made so by a proper construction of the statute itself. The briefs in that case refer to many decisions illustrating the principle. On recurring to the statute now under review, it is plain that there are no words in the enactment showing a purpose to make knowledge a constituent of the penal act. The prohibition is in clear and simple terms against the sale of oleomargarine colored with annatto. Unless, therefore, there be discoverable, in what may be deemed the general design of the Legislature, an intention to limit this language to cases where the seller is shown to be cognizant of the

“character of the article sold, the terms of the statute should be effectuated. This general design, as declared both in the title and in the body of the act, is to prevent deception in the sale of oleo-margarine, and if we have regard to the public sentiment out of which the law sprung, it was, we think, not only to avoid, for the sake of purchasers, the danger of their buying oleomargarine under the belief that it was butter, but also, thereby, to secure to the manufacturers of butter those advantages which fair and open competition would afford. The object was, not to punish acts intrinsically wrong, but to prevent acts which in their results operated unjustly on others. This object would be thwarted if sales could be made with impunity by those ignorant of the ingredients of the article sold. This interpretation of the law does not savor of undue severity. No doubt it may impose some hardship upon some innocent vendors; but the means which dealers in these products generally have of informing themselves as to the substances of which they are compounded are so ample that but few will suffer save through designs or negligence, while no practicable degree of caution would protect purchasers; and it is manifest that the Legislature has thought proper to incur the slight risk of injustice to the few in order to escape the greater risk of injustice to the many.”

(State vs. Newton, 50 N. J. L., 336-7.)

I may be permitted to observe in passing that this last case establishes the further proposition that the fact that the prohibited substances in a pure state may be wholesome and not injurious to health, is irrelevant in a judicial inquiry, and is no defense. And to the same effect see:

State vs. Addington, 12 Mo. App., 214; 77 Mo., 110; Powell vs. Commonwealth, 114 Pa. St., 295; Com. vs. Shafner, 146 Mass., 512.

In his brief, counsel has much to say concerning the Ohio decisions; and inasmuch as the statute under criticism here is a transcript of the Ohio statute, one can understand how the Ohio decisions ruffle counsel's characteristic serenity. But the Ohio decisions make strongly against his position and support in most unequivocal terms the view taken here. When, however, I speak of the Ohio decisions, I have reference to those only which have received the sanction of the higher courts of that State; and I make this remark because counsel, ignoring the opinions of the higher courts, has pinned his faith to the ill-advised and sophomoric lucubration of Judge Sibley, who, in the inferior and subordinate court of the Washington Common Pleas, decided the case of Haas vs. State, reported in 2 Ohio Dec., 177. This case of Haas vs. State arose and was disposed of in the year 1894; it is in opposition to all reason; its doctrine is in flat conflict with the current of respectable authority, and in opposition

to the views of the higher courts in the same State; and it is entitled to no consideration whatever. As illustrating the views of the higher courts of Ohio, I beg leave to refer to a case decided in that State long after the nebulous ruling in the Haas case. In the case to which I refer, the Court said: "As a general rule, guilty knowledge or intent is an essential element in crime at the common law, and also in statutory crime, but not wholly. The rule has its exceptions, and especially so in statutory definitions of crime. There are many cases in the statutes providing police regulations, making certain acts penal, where this element is wholly disregarded. This distinction is noted in 3 Greenl. Ev., Sec. 21, as follows: 'The rule—that ignorance of fact will excuse—would seem to hold good in all cases where the act, if done knowingly, would be *malum in se*. But where a statute commands that an act be done or omitted, which in the absence of such statute might have been done or omitted without culpability, ignorance of the fact, or state of things contemplated by the statute, it seems will not excuse its violation. . . . Such is also the case in regard to many other fiscal police and other laws and regulations, for the mere violation of which, irrespective of the motives or knowledge of the party, certain penalties are enacted; for the law, in these cases, seems to bind the parties to know the fact and to obey the law at their peril.' A relaxing and partial departure from old rules seems proper, and even necessary, in all matters of legislations designed to secure to the citizen the benefits of pure food products and to afford protection against greedy and not over-scrupulous dealers. Says the Supreme Court of Pennsylvania, 139 Pa. St., 247, reported in 23 A. S. R., 182: 'It is for the Legislature to determine whether the public injury, threatened in any particular matter, is such and so great as to justify an absolute and indiscriminate prohibition. Even if, in the honest prosecution of any particular trade or business, conducted for the manufacture of articles of food, the product is healthful and nutritious, yet if the opportunities for frauds and adulterations are such as to threaten the public health, it is undoubtedly in the power of the Legislature either to punish those who knowingly traffic in the fraudulent article, or by a sweeping provision to that effect to prohibit the manufacture and sale altogether.' The enactment of the statute in question, under which plaintiff in error was convicted and sentenced, was a proper exercise of the police power, and the form of the statute clearly evidences the purpose of the Legislature to provide the largest measure of protection possible by making the provision prohibitory. And the prohibition is absolute: 'That no person shall, within this State, manufacture for sale, offer for sale, or sell any drug or article of food which is adulterated,' etc. There is nothing in the wording of the statute defining the offense from

“which it can be held to imply that the forbidden act shall be done knowingly, willfully, or purposely. The declaration is definite and clear, and the intent plainly manifest, that the manufacture or sale of adulterated or impure articles of food, with or without knowledge of such adulteration or impurity, is unlawful; and it follows that persons who engage in such traffic do so at their peril, and that they cannot set up their ignorance of the character and quality of the article they sell as a defense to a prosecution for unlawful selling.”

(Bissman vs. State, 9 Ohio C. C., 716-8.)

And here let me point out to the court the identity between the Ohio prohibition just referred to and that contained in the California statute now under consideration. But when we advance to the Supreme Court of the State of Ohio we find the doctrine of this Bissman case amply sustained. In a case decided in that court as late as 1860 we find the Court saying: “The first section of the act of March 20, 1884, provides ‘that no person shall within this State manufacture for sale, offer for sale, or sell any drug or article of food which is adulterated within the meaning of this act.’ Other provisions of the statute are devoted to the definition of the terms used in the first section, and to prescribing penalties for the violation of the act. It is not doubted that molasses to which glucose has been added is an article of adulterated food within the meaning of the statute. The act does not, in terms, require, to constitute an offense against its provisions, that the adulterated article of food shall be sold to be used by the purchaser as human food. Nor does it, in terms, require, as an element of the offense, knowledge of the fact that the article is adulterated, or provide that a want of such knowledge shall constitute a defense. . . . Purpose and knowledge, except when they are indicated by the character of the forbidden act, are, in most cases, unsusceptible of proof. If this statute had imposed upon the State the burden of proving the purpose of the vendor in selling an article of food, or his knowledge of its adulteration, it would thereby have defeated its declared purpose. . . . If knowledge of the adulteration were an element of the offense, it would be incumbent upon the State to establish it; but since it is not the defendant could derive no advantage from any evidence tending to show the absence of such knowledge. . . . In the enactment of this statute, it was the evident purpose of the general assembly to protect the public against the harmful consequences of the sales of adulterated food and drugs, and to the end that its purpose might not be defeated, to require the seller at his peril to know that the article which he offers for sale is not adulterated, or to demand of those from whom he purchases indemnity

“against the penalties that may be imposed upon him because of their concealment of the adulteration of the articles.”

(State vs. Kelly, 43 N. E. (Ohio Sup. Ct.), 163.

That the inconvenience of the seller must yield to the public good is plain, not only from the expressions of opinion already quoted from the New Jersey case hereinabove cited, but also from the following pointed language written by no less a person than Mr. Justice Thompson of Missouri. This learned jurist, speaking on this subject, says: “Enlightened by so many expressions of judicial opinion, nearly all of them tending in the same direction, we feel bound to hold that a statute prohibiting the manufacture and sale of an article of food made in imitation of a wholesome article in common use, which imitated article is so repugnant to the tastes and prejudices of our people that they will not eat it when advised of its real character, but only when cheated into the belief that it is the genuine article in resemblance of which it is made, is a statute fairly within the police power of the State, not opposed to any provision of the Constitution of the State or of the Constitution of the United States, and the wisdom of which is not to be called in question in the judicial courts; and that this is so, although particular samples of such imitative articles may, in the opinion of scientific men, be as wholesome and beneficial an article of food as the original substance in imitation of which it is made. If this defendant suffers inconvenience from the statute, it is but one of the many cases where the convenience of the individual must yield to the public good.

“In the language of a recent decision of the Supreme Court of the United States: ‘If the public safety or the public morals require the discontinuance of any manufacture or traffic, the hand of the Legislature cannot be stayed from providing for its discontinuance, by any incidental inconvenience which individuals or corporations may suffer. All rights are held subject to the police power of the State.’ Beer Company vs. Massachusetts, 97 U. S., 25, 32.”

(State vs. Addington, 12 Mo. App., 227-8.)

CONCLUSION.

Various other points have been made by appellants in these cases, but they are not of sufficient importance to warrant or merit attention. It is to be hoped that, for the purpose of giving a definitive shape to the law upon this subject, the Court will be able to abstract from its many engagements sufficient time to prepare a written opinion in these cases. Such an opinion would be of great assistance to

the Police and Health and District Attorney's Departments of the Municipal Government, and would eliminate from future controversies much doubt and uncertainty. It is respectfully submitted that the judgments herein should be affirmed.

J. J. DUNNE,
Assistant District Attorney.

Superior Judges Cook, Wallace and Borden, sitting in banc, passed on the case pending on appeal, and rendered the following opinion, which, as it bears directly upon work accomplished by the Bureau of Food Inspection during the past fiscal year, deserves, in my judgment, a place in the annual report:

OPINION.

IN THE SUPERIOR COURT OF THE CITY AND COUNTY OF SAN FRANCISCO, STATE OF CALIFORNIA.

DEPARTMENT 12.

<p>THE PEOPLE OF THE STATE OF CALIFORNIA, <i>Respondent,</i> VS. LOUIS FEUSIER, <i>Appellant.</i></p>	}	No. 12,047
---	---	------------

This is one of the so-called "pure food cases," pending on appeal in this Court. Counsel on both sides, in the elaborate printed briefs presented by them, urge the filing of a written opinion herein. The questions involved are of such a character that the Court considers it a proper case for such an opinion; several questions of practice being involved and an interpretation of the statute under which the prosecution was had, being called for.

JURISDICTION.

The first question raised is that of *jurisdiction*.

The prosecution was had under the statute of March 26, 1895, which is unquestionably a constitutional statute and one clearly within the police power of the Legislature. The preservation of the

health of the citizen is one of the first duties of government. (Powell vs. Com., 114 Pa. St., 294; S. C. 127 U. S., 678; People vs. Ciperly, 37 Hun., 324; S. C., 101 N. Y., 634; State vs. Groves, 2 Atl. Rep. (R. I.), 784; State vs. Smith, 14 R. I., 100; S. C., 51 Am. Rep., 344; Com. vs. Evans, 132 Mass., 11; Com. vs. Smith, 103 Mass., 444; Com. vs. Wentworth, 118 Mass., 441; State vs. Newton, 45 N. J. L., 469; S. C., 50 N. J. L., 534; Pierce vs. State, 63 Md., 592; Butler vs. Cambers, 36 Minn., 69; State vs. Addington, 12 Mo. App., 214; S. C., 77 Mo., 117; Phillip vs. Lee, 75 Ill., 334; Bainbridge vs. State, 30 Ohio St., 264; U. S. vs. Bayard, 16 Fed. Rep., 384; State vs. Campbell, 64 N. H., 402; People vs. West, 44 Hun., 162; S. C., 106 N. Y., 296; State vs. Aronsberg, 105 N. Y., 123; S. C., 59 Am. Rep., 483.)

It is urged by appellant, that by reason of the *possible* penalty of the act, the Police Court of this city and county had no jurisdiction to try the cause. This same question was presented on *habeas corpus* proceedings to me and again to Judge Seawell, of this Court, on behalf of Louis Harter, and on both hearings the prisoner was remanded. Subsequently an application for a writ of *habeas corpus* on his behalf, was made to our Supreme Court, on this ground. Such writ was, by that Court, in bank, denied, the Court holding that "for the purpose of determining jurisdiction, the costs recoverable are not to be deemed a part of the penalty." There is no merit, therefore, in the first point made by appellant.

CHANGE OF TRIAL JUDGE.

The second point made is that the trial Court had no jurisdiction to try the cause, because prior to the commencement of the trial, the defendant filed an affidavit wherein it was stated that he did believe and had reason to believe that said Judge was prejudiced against him. The question here presented has been heretofore presented to this Court, once to Judge Hunt, and once to ex-Judge D. J. Murphy. As stated by counsel, in their briefs, Judge Hunt took one view of the matter, and Judge Murphy held views directly contrary. This Court does not agree with the opinion expressed by Judge Murphy in the case decided by him, and the decision in that case rendered (McAuliffe vs. Conlon) is overruled. In the case of *Ex parte Wright*, 119 Cal., 401, the Supreme Court, in direct opposition to the opinion of Judge Murphy (cited by counsel), holds that the refusal of the Justice to change the place of trial *may* have been an error, and if so that the prisoner had an ample remedy by appeal, but that the question was not one of jurisdiction. (See also *Lowrey vs. Hogue*, 85 Cal., 602.)

The affidavit for transfer of the cause to another Police Judge, was based on Section 1431 of the Penal Code. By that section it is

necessary that *two* facts should *appear* by the affidavit. It is not sufficient that *one* of them *only* appears. The section reads: "If the action or proceeding is in a Justice's Court, a change of the place of trial may be had at any time before the trial commences: 1. When it *appears* from *the affidavit* of the defendant that he has reason to believe, *and* does believe, that he cannot have a fair and impartial trial before the Justice about to try the cause, by reason of the prejudice or bias of such Judge, the cause must be transferred to another Justice of the same or an adjoining township. * * *" It must appear *from the affidavit*, first, that the defendant *has reason* to believe, and, secondly, that he *does* believe, that by reason of the prejudice of the Justice, he cannot have a fair and impartial trial. If counsel's contention were to be sustained, no criminal could ever be brought to trial for a petty offense. All that would be necessary would be for him, through the aid of an unscrupulous attorney, to present successively to each Justice to whom the case might be transferred, an affidavit stating that he did believe and had reason to believe such Justice disqualified, until in the end all Justices in the State having power to try the cause should be exhausted. No such absurdity was ever contemplated by the Legislature in the passage of Section 1431 of the Penal Code. The record in this case shows that an affidavit was presented which did positively state that the defendant *believed* the Judge to be prejudiced, but it wholly fails to fulfill the further requirements of the statute and set forth *facts* showing any *reason* for such belief. The affidavit merely states that the defendant is informed and believes that certain facts exist, without showing from what source his information came or whether it was reliable or not. This is wholly insufficient; the statute provides that it must *appear* from the affidavit that certain facts exist. The reasons must be made *apparent* by the affidavit. (*Ex parte* Wright, 119 Cal., 401; *Lowrey vs. Hogue*, 85 Cal., 602; C. C. P., 897-833; Penal Code, 1431, 1033, 1034, 1035; *People vs. Hubbard*, 22 Cal., 37; *People vs. Maloney*, 18 Cal., 130; *People vs. Williams*, 24 Cal., 31; *People vs. Schuler*, 28 Cal., 490; *People vs. Lee*, 5 Cal., 354; *Krundick vs. Krump*, 98 Cal., 119; *People vs. District Court*, 17 Cal., 547; *People vs. Bell*, 4 Cal., 179; *McCauley vs. Brooks*, 16 Cal., 1; *Wood vs. Strother*, 76 Cal., 543; *State vs. Johnson*, 4 Wallace, 489; *Mining Co. vs. Kaiser*, 58 Cal., 324; *People vs. Yoakum*, 53 Cal., 571.)

VARIANCE.

The third point made by appellant is that there is a variance between the complaint and the proof. We can find no such variance as would justify a reversal of the judgment appealed from.

CRIMINAL LIABILITY OF PRINCIPAL FOR ACT OF AGENT.

The fourth point is that the employee instead of the employer should have been prosecuted. Where clerks and salesmen are employed for the specific purpose of selling to customers the goods contained in a store, so far as the sale of *such goods* is concerned, the acts of such clerks and salesmen are the acts of the proprietor. The evidence in this case shows the salesman to have been employed as a salesman by the defendant, and that the goods sold were taken from the stock of goods in the store, which he was employed to sell. We are satisfied that such proof is all that is required to hold the employer guilty, provided, in selling the goods, the law was violated. (Penal Code, Secs. 31 and 659; *Smith vs. State*, 21 Tex App., 96; *Com. vs. Warren*, 160 Mass., 533; *Com. vs. Proctor*, 165 Mass., 78; *Bissman vs. State*, 9 Ohio C. C., 714.) In the other so-called "pure food cases," decided by this Court, these facts did not appear.

CRIMINAL INTENT.

The last and main point made by appellant in his opening brief is, that the prosecution failed to show that defendant *knew* the goods sold to be adulterated, and that defendant should have been permitted to show that he did not know them to be so. This point calls for an interpretation of the statute under which the prosecution is had, without any ruling of our own Supreme Court thereon.

The briefs filed by the respective counsel herein have elaborately discussed this question, and decisions *pro* and *con* from other jurisdictions have been quoted in the briefs at great length. The statute here in question nowhere requires any *knowledge* of the adulterated character of the goods as an essential to the completion of the crime of selling such goods. The provision is that he who sells adulterated goods is guilty of a crime. Not to know what he is selling, is clearly made by the statute criminal negligence. Taking the words of the statute as indicating the intent of the Legislature, we find that certain elements are specified as necessary for the completion of the crime. No allusion is made to knowledge. Had the Legislature intended to make a knowledge of adulteration an element of the crime, they could and would have said so. *Statutory* crimes, where knowledge or intent are *not* elements of the offense, are common. The rule applied to such cases is that where a statute forbids the doing of a certain act under certain circumstances, without reference to knowledge or intent, any person doing the act mentioned is charged with the duty of knowing that the circumstances attending his act are such as to make it lawful. We are satisfied that under

such statutes conviction may be had upon proof of doing the forbidden act, without proof of knowledge by the accused of the circumstances specified in the statute.

It is clear to us that he who, by himself, or through a clerk, sells food which has been adulterated, *whether he knew it to be adulterated or not*, commits a crime under this law. He sells it at his peril, and is guilty of criminal negligence if he does not know it to be unadulterated. The lower Court, in charging the jury, told them that Section 20 of the Penal Code did "not apply in this case." This was a technical error, but was not such an error as to require a reversal of the judgment appealed from. The Court should have read to the jury that section and then explained to them that to sell food without knowing it to be unadulterated was such criminal negligence as is meant by the statute.

Many cases have been examined in coming to this conclusion, and without quoting therefrom we cite the following as those upon which, taken together, we base our opinion:

Com. vs. Warren, 160 Mass., 533; Com. vs. Proctor, 165 Mass., 78 Bissman vs. State, 9 Ohio, C. C., 714; Verona C. Co. vs. Murtagh, 50 N. Y., 317; State vs. Zichfield, 46 Pac. Rep., 802; U. S. vs. Bayaud, 16 Fed. Rep., 384; 3 Ben., 558; Com. vs. Weiss, 139 Pa. St., 247; Fitzpatrick vs. Kelly, L. R. 8 Q. B. Cases, 337; Com. vs. Elwell, 2 Metc., 190; Com. vs. Marsh, 7 Metc., 472; Com. vs. Emmons, 98 Mass., 6; Com. vs. Boynton, 2 Allen, 160; Barnes vs. State, 19 Conn., 397; Com. vs. Hallett, 103 Mass., 452; Com. vs. Goodwin, 97 Mass., 117; King vs. State, 6 So. (Miss.), 188; State vs. Hatfield, 24 Wis., 60; Com. vs. O'Keene, 152 Mass., 584; Altschul vs. State, 8 Ohio C. C., 214; People vs. Dolan, 96 Cal., 315; People vs. Fowler, 88 Cal., 136; State vs. Addington, 12 Mo. App., 214; State vs. Newton, 50 N. J. L., 536; People vs. Snowberger, 71 N. W. (Mich.), 497; State vs. Smith, 10 R. I., 260; People vs. West, 106 N. Y., 286; People vs. Mahaney, 41 Hun., 26; People vs. Shaffer, 41 Hun., 23; People vs. Kibler, 106 N. Y., 322; People vs. Eddy, 12 N. Y. Supp., 628; People vs. Zeigler, 6 Park. C. Rep., 355; Powell vs. Com., 114 Pa. St., 294; S. C. 127 U. S., 678; State vs. Campbell, 64 N. H., 402; State vs. Kelly, 43 N. E. (Ohio), 163.

There are some few other points made in appellant's closing brief, but as they were not presented in the opening brief the District Attorney has had no opportunity to reply to them, and in justice to the people they ought not to be considered. We have, however, examined the record, and fail to find that it shows any errors which require a reversal of the judgment. The only other point made which we consider of importance is the ruling made at the time the chal-

lenge to the panel was interposed by defendant, but on this point the statement on appeal fails to set forth the proceedings had with sufficient clearness for us to determine whether error was or was not committed. Further, it does not appear that any of the jurors in the panel challenged were sworn to try the cause. It further appears, by the record, that the jurors were *not* summoned by the person whose presence defendant desired as a witness in support of his challenge and whom it was claimed summoned the jurors. No injury therefore, resulted.

For the reasons herein given, I am of the opinion that the judgment and order appealed from herein should be affirmed.

CARROLL COOK, Judge.

We concur:

WM. T. WALLACE, Judge.

RHODES BORDEN, Judge.

Dated August 30th, 1898.

Ordered that judgment and order appealed from herein be and the same is hereby affirmed.

WM. T. WALLACE,

CARROLL COOK,

RHODES BORDEN,

Judges of the Superior Court.

Dated August 30th, 1898.

During the months November, December and January, the work of inspecting food, milk and dairies proceeded on the same plan as prior to the organization of the Bureau of Food Inspection, viz.; being carried on by myself alone as well as possible under such adverse circumstances.

During the month of November I inspected 300 milk wagons, from which 110 samples were selected and submitted to the Babcock test; five of same were found to be below the standard. In consequence thereof I recommended that the permits of the guilty dealers be revoked. I also condemned and destroyed 286 packages of canned goods and 87 gallons of adulterated milk.

In the month of December 25 dairies were inspected, 18 of which were found in an unclean condition; the owners were notified to comply with the instructions of the Board of Health.

In the month of January 21 dairies were visited, and owners notified to put same in sanitary condition. 431 milk wagons were inspected, from which samples were selected, and found to be at standard. Eleven Deputy Food Inspectors were appointed and assigned to the Bureau of Food Inspection, to report for duty on February 1st.

I divided the city and county into five districts as to dairy inspection, and four districts as to milk inspection, detailing the deputies to the various districts. During this month 246 samples of milk were taken, of which 148 were above standard, 47 at standard and 51 below standard. 192 dairies were inspected, and 8 found in bad condition.

During the month of March 394 samples of milk were taken from wagons, of which 187 were above standard, 117 at standard and 90 below standard. A night patrol was established, and 115 wagons examined, resulting in finding over one-third of that number with a quality of milk not up to the standard required by your honorable board. In all cases where the milk was found to be below the standard the owners were notified that a second violation would be followed by arrest and prosecution. 182 dairies were visited, and 12 were found in bad condition.

In April 297 samples of milk were taken, 84 were found to be above standard, 186 at standard, and 27 below standard. 144 dairies were visited, and 8 found in bad condition.

During the month of May 117 dairies were visited and found in good condition. 250 samples of milk were taken, of which 115 were found to be above standard, 92 at standard, and 43 below standard. At Reid's Cash Store, 126 Seventh street, I condemned 27 large sacks of assorted dried fruits, and 11 boxes of dried figs. Fourteen milk

dealers were arrested for selling adulterated milk, thirteen of whom were convicted, with fines aggregating \$110.

During the month of June 502 samples of milk were taken, of which 268 were above standard, 182 at standard, and 52 below standard. Sixteen dealers were arrested for selling adulterated milk, with fines aggregating \$130. Two hundred and seventeen dairies were visited, and one found in bad condition.

On March 1st, a special meeting of the Board of Health was held to hear attorneys representing dairymen from outside counties in the matter of the quarantine of infected cattle and milk. W. W. Foote, Esq., appeared in behalf of the dairymen of this county, and made the following objection: That the herds in this county supply practically about thirty per cent. only of the milk consumed in this city, the balance coming from adjacent counties. His clients claimed that the tuberculin test was not being enforced in outside counties, and that to enforce this test in the county of San Francisco would work an unnecessary hardship and discrimination against the dairymen of this county.

Dr. J. M. Williamson stated that: "A few months ago the Board of Health had passed a resolution placing a quarantine upon all milk coming from outside counties, where the milk did not bear evidence of coming from herds which had been submitted to the tuberculin test. The quarantine was raised mainly upon the representations of the authorities of the outlying counties to the effect that resolutions would be passed by such authorities and tuberculin inspection commenced at once. This has been done in some counties. In others it has been entirely neglected, and for the latter reason these gentlemen were invited to meet the Board to-day, and state what is being done in regard to the enforcement of this test."

Mr. Foote said he had stated all he desired, and that the facts as cited by Dr. Williamson were correct, "that practically the milk produced in this county is only thirty per cent. of the amount consumed here."

"Now, the Board of Health of this county does not claim jurisdiction outside, and if this test is to be applied here only, and we are to be subjected to the annoyance of an examination and the destruction of the cattle, it would not do a great deal towards purifying the milk supply, because seventy per cent. of it comes from outside counties. We were informed by some gentleman of the Board of Health, or some attorney representing the outside counties, that an inspection had been attempted in Marin and San Mateo counties, but the dairymen had declined to allow the test to be made, and we thought, in the interest of justice, if they would not subject themselves to the same rules that were applied to the dairymen in San Francisco, there ought to be a quarantine of that milk. I don't believe the law is in such a position now that if it were resisted strenuously in the courts that you gentlemen could enforce it; I don't believe you can enforce it if it is resisted."

Dr. Williamson said: "I think Mr. Dockery being thoroughly familiar with the history of this inspection could make a statement to the Board, and cite some instances which have occurred in the progress of this inspection."

Mr. Dockery then stated: "In reference to the inspection of cattle and the quarantining of milk in adjacent counties, I will say that the tuberculin inspection commenced about the 15th of April, 1896. The first dairy inspected was that of Nick Hansen, The California Dairy. After that the inspection went on at the Swiss Alpine Dairy; that was in July, but on the 25th of June we had the same protest from the dairymen of San Francisco county, which is a just one, that it is not fair to them to go through their herds with the tuberculin test and kill off their cattle, where but thirty per cent. of the milk provided comes from their dairies, and seventy per cent. from outside counties."

On the 20th of June, 1896, the Board of Health issued an order notifying dairymen in adjacent counties that on and after the 1st day of October, 1896, all milk coming into the city and county of San Francisco from other counties,

where the dairy herds had not been submitted to the tuberculin test, or where the proprietors refused to allow their herds to be submitted to such test, would be quarantined against.

Along about the middle of September, from that up to the 1st of October, dairymen in adjacent counties protested that the time was too short, that it was an utter impossibility for them to proceed with the tuberculin test and complete it in that time. There was a meeting of the Board of Health on September 29th, and the order issued in regard to quarantining the milk on Oct. 1st was rescinded, and the following resolution was passed:

At a meeting of the Board of Health held August 11th, 1896, with those furnishing milk for this city and with the Health Officers of San Mateo and Santa Clara counties, Oakland and Berkeley, it was stated to this Board that it had been and was impossible for those supplying milk for the city to comply with the Order of this Board of June 25th, 1896, providing for the quarantining of all milk from cows that had not been tested by the U. S. Tuberculin test.

After a careful investigation it has been found that the statements there made were true, and that such impossibility has been due to causes over which neither this Board nor, in many instances, those interested had control.

It is therefore resolved, That the operation of so much of our Order of the 25th of June, 1896, as requires on and after 1st of October, 1896, the quarantining of milk from cows not so as above tested be postponed until the further order of this Board, in so far only, however, as concerns such persons, firms or corporations supplying milk for this city as shall daily submit such supply of milk for inspection at the most convenient inspection station of the four open food inspection stations, as soon as such stations are ready for operation, and shall comply further with all rules and regulations of this city, and the laws of this State.

This resolution was complied with by the shippers.

Later on there were many conferences held between the Board of Health and the prominent dairymen of this county, the latter protested against the Board of Health continuing to apply the tuberculin test to their herds, until after such time as the Legislature would meet; they contended that

they would have a law passed which would be just and equitable to all. Their main objection was, that if the tuberculin inspection were carried on, and if a dairyman would have fifty per cent. of his herd condemned and destroyed as the result of such test, there would be no other recourse than to go into the interior and purchase cows that had not been inspected by the tuberculin test, and they further contended that the Board would have the power to inspect the newly purchased cows, and possibly condemn and destroy fifty per cent. of them.

The result of this conference was that the Board of Health took the same view of the matter, consequently it was decided that there would be no further inspection until after the Legislature had met and adjourned.

During the month of June, 1897 (the Legislature having met and adjourned), the Board of Health issued orders to proceed with the tuberculin test. We started on George C. Smart's dairy and proceeded on different dairies, continuing to apply the test until November 1st, after which date further inspection could not be carried on, owing to the fact that the Board of Supervisors had failed to make the necessary appropriation.

During the latter part of July an order which was in force in Alameda County, in reference to the testing of cattle was rescinded by the Board of Supervisors of that county; consequently, on July 21st, 1897 there was a resolution passed by the Board of Health of San Francisco refusing entry of milk that came from uninspected cows, and on July 23d I was ordered by the Board of Health to quarantine all milk coming from adjacent counties. I proceeded and quarantined the same. The quarantine was raised by order of the Board of Health for the following reason.

I received a telegram from the Chairman of the Board of Supervisors of Marin county, as follows:

San Rafael, Marin County, Cal.

July 23rd, 1897.

To Whom It May Concern:—I hereby certify that at a meeting of the Board of Supervisors of Marin County, held on the 19th instant, an ordinance was regularly passed making three provisions, as follows:

First—For the appointment of a Sanitary Inspector of Dairies in Marin County.

Second—For the appointment of a Health Officer.

Third—For the appointment of a Veterinary Surgeon.

That this order has been duly published and will take effect in 15 days. There is no opposition in Marin County to said order, and, so far as I know, every dairyman is in full accord with the rules established by the Board of Health of San Francisco.

(Signed.)

WM. BARR, Chairman.

On receipt of the above the quarantine on milk from Marin County was raised immediately. I was informed that in Contra Costa county there was at that time no Health Officer, but a promise made that the Board of Supervisors would as soon as possible appoint an officer who would attend to the matter.

A number of dairymen from Alameda county came to this city; also the Health Officer of Oakland, Dr. Dunn. They were very anxious to have their cows tested, but there were no provisions made wherein they could do so, there being some conflict amongst the Veterinary Surgeons or authorities in their county. I so reported the matter to the Board of Health, and on July 23th the quarantine was finally raised, with the understanding that suitable legislation would be enacted by the various Boards of Supervisors in order that the cows should be regularly tested with the tuberculin test.

On the 11th of September I was in Santa Rosa, and went before the Board of Supervisors there; the Mayor was present at the meeting, and the condition of affairs there were the same as in Alameda county; there seemed to be no funds and no provisions made for any inspection. I suggested that they appoint a committee to visit the Board

of Health of this city and confer with them. I stated that the Board of Health here did not desire to do any injustice to dairymen in adjacent counties, but would positively insist on the tuberculin test being applied. The dairymen complied with the request, and there was a committee of five appointed; said committee appeared before the Board of Health, and stated that they would be in full accord with whatever rules and regulations were laid down by the Board. In Marin county a committee of five was appointed to confer with the Board here, and at a meeting held October 14th, at which said committee was present, they agreed to comply with the rules and regulations of the Board of Health of San Francisco. In November I was instructed to visit the various adjacent counties and ascertain the names of dairymen who refused to allow the test to be applied to their herds. On December 12th I filed a report giving the names of numerous dairymen in Alameda and Contra Costa counties who refused to comply with the rules of the Board.

The dairymen in this county have shown a disposition to conform to the rules and regulations as laid down by the Board of Health, and in our visits to the different dairies, and in consulting with our leading dairymen, there is no objection whatever shown on their part to submit their herds to the tuberculin test, provided the Board of Health will insist that all counties from which milk is shipped into this county must have their herds tested also; therefore, I recommend most strongly that after all the notices of warning that have been sent to dairymen in adjacent counties in regard to products coming into the city and county of San Francisco from diseased cattle: That on and after the 1st day of April, 1898, all dairy products coming into the city and county of San Francisco from dairies whose herds have not been submitted, or whose proprietors refuse to allow their herds to be submitted to the tuberculin test, be quarantined against.

After a lengthy discussion the matter was referred to Garret W. McEnerney, Attorney of the Board of Health, for an opinion, and still remains in abeyance.

REPORT OF MILK AND FOOD INSPECTION.

I herewith submit a report in full of the work done at the four Milk and Food Stations, from July, 1897, up to the time they were abolished on account of necessary funds not having been provided for their maintenance by the honorable Board of Supervisors:

REPORTS OF HEALTH INSPECTORS.

FIRST DISTRICT—WM. FINNIGAN, INSPECTOR.

San Francisco, June 30th, 1898.

To the Honorable the Board of Health

Of the City and County of San Francisco—

Gentlemen: I herewith submit my report for District No. 1 for the fiscal year ending June 30th, 1898:

Number of complaints unabated June 30th, 1897.....	7	
Number of complaints filed during year.....	649	
		656
Number of complaints abated.....	193	
Number of complaints, no cause.....	154	
Number of complaints referred to other departments.....	307	
Number of complaints unabated.....	2	
		656
Number of cases diphtheria reported.....	27	
Number of cases scarlatina reported.....	11	
Number of cases typhoid fever reported.....	5	
Number of cases measles reported.....	5	
Number of fumigations.....		46

SECOND DISTRICT—OTTO LUDERS, INSPECTOR.

San Francisco, June 30th, 1898.

To the Honorable the Board of Health

Of the City and County of San Francisco—

Gentlemen: I herewith submit my report for District No. 2 for the fiscal year ending June 30th, 1898:

Number of complaints unabated June 30th, 1897.....	2	
Number of complaints filed during year.....	473	
		475
Number of complaints abated.....	260	
Number of complaints, no cause.....	44	
Number of complaints referred to other departments.....	171	
Number of complaints unabated.....	0	
		475
Number of cases diphtheria reported.....	39	
Number of cases scarlatina reported.....	9	
Number of cases typhoid fever reported.....	2	
Number of cases measles reported.....	1	
Number of fumigations.....		49

THIRD DISTRICT—JAS. W. CROWE, INSPECTOR.

San Francisco, June 30th, 1898.

To the Honorable the Board of Health

Of the City and County of San Francisco—

Gentlemen: I herewith submit my report for District No. 3 for the fiscal year ending June 30th, 1898:

Number of complaints filed during year.....	679	
Number of cases unabated June 30th, 1897.....	6	
		—

Number of cases scarlatina reported.....	8	
Number of cases typhoid fever reported.....	7	
Number of cases measles reported.....	1	
Number of fumigations.....	90	

REPORT OF CHIEF PLUMBING INSPECTOR.

San Francisco, July 1st, 1898.

To the Honorable the Board of Health

Of the City and County of San Francisco—

Gentlemen: In connection with my annual report I beg leave to submit a review of the work performed by the Plumbing Department during the year, more particularly in reference to the results accomplished in the special investigations ordered by your honorable body in the Chinese, Latin and tenement-house districts of the city. When my annual report of 1897 was filed, a house-to-house inspection in the greater part of Chinatown had been finished. Conditions of the most repulsive and unsanitary character had been removed and the district investigated by this Department had been made more healthful, more habitable to its residents and less of a menace to the general health of the community than it had ever been before in its existence. Considerable work of the same kind, involving great and persistent labor, had also been done in the Latin quarter and in the tenement house district.

During the fiscal year just closed this department has combined its labors in the same parts of the city, and a practical revolution in the sanitary conditions has been made.

The entire Chinese quarter has been covered and owners of property have improved, cleaned and in some instances practically remodeled their premises to conform to the regulations established by your honorable body.

Having finished its labors as far as possible in Chinatown, this Department turned to the Latin quarter, which in its many violations of health laws presented an evil almost as gross as that of Chinatown. Overcrowded, unclean, dilapidated habitations, filthy, antiquated, unsanitary

plumbing and inadequate drainage made the district, in some parts, loathsome and menacing.

A systematic inspection of this unhealthful quarter has been made day after day for over ten months. In the district covered, every house has been visited, and, wherever the condition warranted, improvements or complete changes to conform to the regulations of the Board of Health have been ordered. In many instances owners have delayed or resisted the commands of your honorable body. This has necessitated frequent visits to the unwilling owners, reiterated demands, and, in many instances, arrests and prosecutions to enforce an obedience to the law.

The work of this Department, during the year, in this district alone may be seen from the following:

Powell, on both sides, from Pacific to Filbert.

Stockton, on both sides, from Pacific to Filbert.

Dupont, on both sides, from Pacific to Filbert.

Kearny, on both sides, from Pacific to Filbert.

Montgomery, on both sides, from Pacific to Filbert.

Sansome, on both sides, from Pacific to Union.

Filbert, on both sides, from Powell to Sansome.

Union, on both sides, from Powell to Sansome.

Green, on both sides, from Powell to Battery.

Vallejo, on both sides, from Powell to Battery.

Broadway, on both sides, from Powell to Battery.

In the tenement and lodging house districts, north and south of Market street, much systematic inspection of a similar character, but scattered over a larger area, has also been accomplished. In connection with the results of the investigations of the Plumbing Department in the Chinese and Latin district, I would suggest to your honorable body the necessity of detailing an inspector for constant duty to supervise the improvements in sanitation that have been made. The residents, with very few exceptions, tend to relapse to former conditions if not constantly watched.

The duties devolving upon this Department make it impossible for the time of one inspector to be given exclusively

to such a supervision. This will be seen from the figures of my tabulated report. During the fiscal year, 11,519 inspections have been made by this department. This represents the inspections of new and old buildings, and the investigation of complaints referred to the Department by Health, Cigar, Laundry and Market Inspectors. The inspections involved in special investigations cannot properly be tabulated. In conclusion, I wish to say that in the performance of the duties of this Department I have been ably and faithfully assisted by Assistant Plumbing Inspectors Thomas McGrath, P. J. Ward, W. E. Kelly and Joseph Connolly.

Number of plans submitted (representing 802 houses).....	634
Number of inspections on construction.....	1,093
Number of inspections on completion.....	702
Number of inspections made on complaints referred by Health Inspectors	3,284
Number of abatements made on complaints referred by Health Inspectors	1,722
Number of inspections made on complaints received by Plumbing Department.....	829
Number of abatements made on complaints received by Plumbing Department.....	543
Number of inspections made on alterations by permit.....	377
Number of inspections made in Chinatown.....	665
Number of abatements made in Chinatown.....	208
Number of inspections made in the Latin Quarter.....	2,178
Number of abatements made in the Latin Quarter.....	251
Number of first notices sent to owners or agents of property in all parts of City.....	3,164
Number of last notices sent to owners or agents of property in all parts of City.....	548
Total number of inspections made.....	11,519
Total number of feet of castiron sewer pipe.....	53,613
Total number of feet of ironstone sewer pipe.....	23,415
Number of traps at curb.....	709

Respectfully submitted,

JOHN J. SULLIVAN,

Chief Plumbing Inspector.

REPORT OF CHIEF MARKET INSPECTOR.

San Francisco, July 1st, 1898.

To the Honorable the Board of Health

Of the City and County of San Francisco—

Gentlemen: I have the honor of presenting my annual report as Chief Market Inspector of the work accomplished during the fiscal year just ended, and giving a detailed statement of the condemnations made by the Assistant Market Inspectors and myself.

Since my last report the Board has allowed me one extra Inspector, whom I have detailed for duty in Butchertown. As in that locality there are thirteen beef, eight sheep and ten hog slaughterhouses, it is a physical impossibility to thoroughly inspect the carcasses of all animals killed with the very small force of two Inspectors for that particular purpose, for the reason that each carcass should be carefully examined before the intestines are removed, and, as there are on an average of 2,232 head of animals killed daily, you can readily see the need of more Inspectors in the Butchertown district. Furthermore, all animals slaughtered under our supervision should be properly tagged with an official seal of this Department, thereby showing to the public that the animals slaughtered are free from disease.

There are in the neighborhood of some 450 markets and stalls in the city under our jurisdiction, and which are inspected at least twice a month, and, as I have mentioned in my previous reports, all these markets should be made to secure permits from this office the same as are vendors of milk.

In my two previous annual reports I have suggested that all markets be prohibited from exhibiting meats in front of the establishments, as the dust from the streets, impregnated with disease germs and filth, speedily transforms healthy beef into that which is absolutely a menace to health, but I am very sorry to state that no action has been taken in the matter. Therefore, I earnestly hope, in the in-

terest of public health, that this much needed law will be enacted by the proper authorities.

During the year there have been twenty-five arrests, of which twenty-three have been convicted with fines imposed amounting to \$275. There was one acquittal on the grounds of the complaint being faulty. I therefore had the defendant re-arrested on a new complaint, but the case was dismissed on the grounds that the defendant had been once in jeopardy. There is one case still pending on which the defendant demands a new trial, the outcome of which I will make known in my next monthly report.

I would respectfully call your attention to the fact that 25 arrests have been made during the past fiscal year as against 12 for the preceding year.

I would also call your attention to the urgent need of an Assistant Attorney for the purpose of prosecuting cases in the Police Court, for the reason that as I am not an attorney, it is impossible for me to prosecute the cases myself. Therefore, in the interest of justice, I would advocate the engaging of an Assistant Attorney for the sole purpose of consulting, drawing up of complaints properly and prosecuting same.

In conclusion, I wish to return thanks for the able assistance rendered me in the carrying out of the orders issued by your honorable body to Deputies River, Jordan, Turner and McEnroe, they having worked on an average of ten (10) hours a day, and having called on them at all hours of the night, they were always ready for the benefit of the public health to cheerfully assist me.

For the convenience of the public and trade in general, I have, as heretofore, appended a complete alphabetical list of all markets in this city and county. I have also prepared for your honorable body a series of maps upon which are placed the location of all markets in this county. Each market has been given an official number to designate it in future inspections.

All of which is respectfully submitted.

BEN. DAVIS,
Chief Market Inspector.

REPORT OF VETERINARY SURGEON.

San Francisco, July 1st, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

I have the honor to submit the following report of work performed by the Veterinary Department during the year commencing July 1st, 1897, and ending June 30th, 1898.

Considering the work which has been done in the use of tuberculin for the diagnosis of tuberculosis in dairy cows, the most important work done by this department, I have commenced my report giving a tabulated record of the temperatures taken while the tuberculin testing was in progress; also, a record of the most important pathological changes due to tuberculosis on post mortem examination.

It is needless for me to comment on the importance of a thorough inspection of dairy cattle and the adoption of every available agent which will assist in such inspection, therefore the efficiency of tuberculin in the discovery of tuberculosis in cattle strongly urges its use in all dairy inspections.

Owing to a lack of State legislation in the matter of the use of tuberculin as an agent, and a sincere desire on the part of your honorable board not to inflict an unnecessary hardship upon any one group of cattle owners, we have been unable to prosecute the work of dairy inspection with the vigor necessary; but it is to be hoped that at some future time a legislative measure may be passed which will enable the universal use of tuberculin in dairy inspection, as it is only by its aid we can ever hope to make any appreciable diminution of this dread disease throughout our dairy herds.

However, the work that has been done with tuberculin

has made evident changes in regard to raising the standard of the dairy stock in this county, and the fear and expectancy that at any time such regulations may be enforced which will compel them to submit their stock to an inspection, using the tuberculin test, has made the dairyman extremely discreet as to what kind of stock he purchases for his dairy.

Even the improvement effected in the cleanliness of the dairy premises and equipment is such that may justly meet the endorsement of the public and the approval of your honorable board.

Yours very respectfully,

I. W. O'ROURKE,
Veterinary Surgeon.

REPORT OF BAKERY INSPECTOR

San Francisco, July 1st, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

Gentlemen: I herewith submit the following report of inspection of bakeries for the fiscal year ending June 30th, 1898.

During the brief period that I have acted as Inspector of Bakeries I have found them generally in good condition, especially in the western portions of the city, where many of them are located on the ground floors.

In the eastern and more crowded sections, with few exceptions, they are in cellars. While this is unavoidable on account of the high rents that would be charged for more suitable places, and also the impossibility of obtaining locations outside of cellars in certain large sections of the city, they can be made less objectionable if statutes or ordinances could be enacted compelling owners of property in which bakeries are located to put down cement or stone floors. Most of the floors in cellar bakeries are constructed of wood, through the cracks of which the poisonous gases with which the soil of a large city is necessarily saturated rises into the bakeries, especially those imperfectly ventilated. With stone or cement floors well sealed, the exhalations from the soil could not rise into the bakeries, and the health of the men, as well as the quality of the bread, would be improved.

Through the efforts of my predecessor I find, as far as my observation goes, that the plumbing in many bakeries has

been renewed, and in this respect there is little cause for complaint.

Following is a synopsis of results of inspection of bakeries during the past year:

Total number of bakeries under inspection.....	237
Number of inspections from July 1st, 1897, to July 1st, 1898.....	1366
Number of nuisances abated.....	93
Number of bakeries referred to Plumbing Inspector.....	39
Number of nuisances unabated July 1st, 1898.....	4

Very respectfully,

J. T. WASHINGTON,

Inspector of Bakeries.

REPORT OF BATH AND LAUNDRY INSPECTOR.

San Francisco, July 1st, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

November	21	May	7
December	42	June	9
Total			<u>645</u>

P. LYDON,
Bath and Laundry Inspector.

REPORT OF CIGAR FACTORY INSPECTOR

San Francisco, June 30th, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: In submitting my report, covering the period from February 10th, 1898, to date, permit me to state that I have inspected and approved one hundred and ninety-six (196) cigar factories in the city and county of San Francisco. In many instances I found factories in bad sanitary condition, especially in Chinatown. Permits were withheld from many of these factories pending compliance with the requirements of your honorable Board, but am gratified to say all has been satisfactorily arranged, permits issued and the general condition of affairs in much better shape. On account of the number of complaints reported to your honorable board by the Health Inspectors from their several districts, an ordinance was drafted and submitted to the honorable Board of Supervisors and passed on January 17th, 1898, thus constituting this department, which I have the honor to represent in the Health Department.

ORDER No. 46 (SECOND SERIES).

Regulating the establishment and maintenance of cigar factories within the City and County of San Francisco.

PREAMBLE.

Whereas, The indiscriminate establishment of cigar factories, where cigars are manufactured and prepared for use, is injurious and dangerous to public health and public safety, and prejudicial to the well-being and comfort of the community; now, therefore,

The people of the City and County of San Francisco do ordain as follows:

Section 1. On and after the passage of this Order it shall be unlawful for any person or persons to establish, maintain or carry on the business of a cigar factory, where cigars or other articles of tobacco are made, within the limits of the City and County of San Francisco, without having first complied with the conditions hereinafter specified.

(Persons Conducting Cigar Factories Must Obtain Certificates From Health Officer as to Sanitary Condition of Premises.)

Section 2. It shall be unlawful for any person or persons to conduct or maintain a cigar factory within the City and County of San Francisco without having first obtained a certificate signed by the Health Officer of said City and County that the premises are properly and sufficiently ventilated, and that all proper arrangements for carrying on the business without injury to the sanitary condition of the neighborhood have been complied with, and particularly that all provisions of all Orders of this Board have been complied with.

(Certificates of Health Officer—No Charge to Be Made Therefor.)

Section 3. It shall be the duty of the Health Officer, upon application from any person or persons proposing to open or conduct the business of a cigar factory within the limits of the City and County of San Francisco, to inspect the premises on which it is proposed to carry on such business, or in which said business is being carried on, with a view to ascertaining whether the said premises are provided with proper drainage and sanitary appliances; also, whether the provisions of all Orders of this Board relating thereto have been complied with, and, if found in all respects satisfactory, then to issue to said applicants the certificate provided for in Section 2 of this Order.

No charge whatsoever shall be made or compensation or fee collected or received, for the performance of any of of the services required by the provisions of this Order in the inspection of premises or the issuance of a certificate; but all services shall be performed free of charge.

(No Person Suffering From Contagious or Infectious Diseases to Be Permitted to Work, Sleep, Lodge or Remain in Any Cigar Factory.)

Section 4. No person or persons engaged in the cigar business within the limits of the City and County of San Francisco shall permit any person suffering from any contagious or infectious disease to work, sleep, lodge, or remain within or upon the premises used by him, her or them, for the purpose of a cigar factory.

(Prohibiting the Smoking of Opium in Places Wherein Cigars Are Manufactured.)

Section 5. No person or persons engaged in the cigar business within the limits of the City and County of San Francisco shall permit the introduction of or the smoking of opium within or upon the premises used by him, her or them, for the purpose of a cigar factory.

(Prohibiting Persons From Sleeping or Cooking in Rooms Wherein Cigars Are Manufactured.)

Section 6. It shall be unlawful for any person or persons owning

or employed in any cigar factory in the City and County of San Francisco to sleep or cook in the rooms wherein cigars are manufactured or prepared for use.

(Prohibiting the Placing of Cigars Between the Lips or in the Mouth For the Purpose of Biting or Moistening the Ends Thereof.)

Section 7. It shall be unlawful for any person or persons owning or employed in any cigar factory in the City and County of San Francisco to place between the lips or in the mouth the ends of cigars or other parts thereof for the purpose of moistening or biting same, or for the purpose of otherwise improving their appearance.

(Prohibiting the Spraying of Tobacco by Means of Water Emitted From the Mouth or by Means of Receptacles Whereby Water is Emitted by Means of Air Expelled From the Mouth.)

Section 8. It shall be unlawful for any person or persons owning or employed in any cigar factory in the City and County of San Francisco to spray tobacco or otherwise moisten it by means of water emitted from the mouth or by appliances whereby the water is expelled by means of the mouth.

(Prohibiting Expectoration Upon the Floors of Rooms Wherein Cigars Are Manufactured or Prepared for Use.)

Section 9. It shall be unlawful for any person or persons owning or employed in any cigar factory in the City and County of San Francisco to expectorate upon the floors of such rooms wherein cigars are manufactured or prepared for use.

(Prohibiting the Drying of Tobacco Upon Floors and Providing for the Use of Racks.)

Section 10. It shall be unlawful for any person or persons owning or employed in the cigar manufacturing business within the limits of the City and County of San Francisco to dry tobacco, previously moistened, upon floors or upon stands possessing a tendency to contaminate or injuriously affect the condition thereof, but upon clean cloths provided for the purpose and stretched over wooden frames, or upon such other contrivances previously approved by the Health Officer.

(Penalty.)

Section 11. Any person or persons establishing, maintaining or carrying on the business of a cigar manufactory wherein cigars are manufactured or prepared for use within the limits of the City and County of San Francisco, without having complied with the provisions of this Order, shall be guilty of a misdemeanor, and, upon conviction thereof, shall be punished by a fine of not more than one hundred dollars, or by imprisonment of not more than six months, or by both such fine and imprisonment.

(Certificates of Health Officer to Be Exhibited in a Conspicuous Place.)

Section 12. The certificate from the Health Officer, as required by Section 2 of this Order, shall be exhibited in some conspicuous place on the premises, and same shall be produced on the demand of any officer of the City and County of San Francisco.

(Health Officer to Enforce Provisions of Order.)

Section 13. The Health Officer is hereby directed to have the provisions of this Order strictly enforced.

In Board of Supervisors, San Francisco, January 17, 1898.

It certainly is a great acquisition to this city to have this regulation, as a comparison between former and present conditions will thoroughly demonstrate to any practical or intelligent mind. As this branch of the Department has only been organized for a short time, it is, in my opinion, hardly fair to form conclusions from present results, but from my experience thus far I feel more than confident that the Department of Cigar Factory Inspection will become one of the most important adjuncts to the Health Department.

In my rounds I have found many nuisances, which I have reported daily and caused to be abated; for instance, dirty paper on the walls, dirty clothes and floors; in several instances have required a general "clean up." I think I am justified in stating that the cigar factories in general are in good condition.

Below find figures as follows:

Permits issued to date.....	196	
Permits withheld to date.....	0

Respectfully,

E. L. PARAMORE, M. D.,
Public Vaccinator.

REPORT OF POLICE SURGEON.

San Francisco, July, 1st, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I herewith respectfully submit the annual reports of the City Receiving Hospital and of the Harbor and Park Branch Receiving Hospitals for the fiscal year 1897-1898.

The year just ended has been the first year of activity in the two branch hospitals, and as a result we note a most remarkable increase in the number of persons treated in the Receiving Hospital service. The total number of persons given assistance in all the three hospitals is 9,433. Of these 5,393 were attended at the Main Hospital, 3,583 were attended at the Harbor Branch Hospital, and 457 were attended at the Park Branch Hospital.

As shown by these figures, the Main Receiving Hospital closely approaches the number of persons treated in former years (5,753 in 1896-1897). The increase, therefore, is due to the opening of the two branch hospitals, and especially to the Harbor Branch Hospital, clearly demonstrating the utility and necessity of these institutions.

Both branch hospitals have lately received a complete outfit of instruments and are prepared to meet all demands in the line of emergency service.

The medical staff of each Branch Hospital has been augmented from two to three, through the appointment of a third Assistant Surgeon at the Harbor Hospital and the transfer of one Assistant Surgeon from the Main Hospital to the Park Hospital. The hours of duty have been arranged to correspond at all three Receiving Hospitals, which arrangement permits of the transferring of the As-

sistant Surgeons from one hospital to another without causing any disturbance in the service or interference with the private business of the surgeons.

On April 12th, 1898, the Main Receiving Hospital was relieved of the care of the insane, for whom the Board of Supervisors had provided special quarters adjoining the Receiving Hospital, but under a separate management. The results of this measure have proven most beneficial to both the insane and the patients of the Receiving Hospital.

DISPOSITION OF PATIENTS.

CHAS C. BUCHER,
 Head Steward.

REPORT OF HARBOR RECEIVING HOSPITAL.

San Francisco, July 1st, 1898.

Dr. Conrad Weil, Police Surgeon—

DEAR SIR: We have the honor to submit to you the following report in full of the work done at the Harbor Receiving Hospital from July 3rd, 1897, to June 30th of this year.

We feel that this is the proper time to thank the Assistant Surgeons who have served here without pay during that period for the material assistance they have given us.

The honorable Board of Harbor Commissioners have endeavored in every way to assist us. Any needed repairs or alterations that we have asked for have been cheerfully made, and too much cannot be said to express the thanks of all connected with this hospital for their extreme kindness and courtesy to us.

Respectfully,

ED. E. HILL, M. D.,

W. B. DEAS, M. D.,

ROLAND E. HARTLEY, M. D.,

Asst. Police Surgeons.

REPORT OF CITY AND COUNTY HOSPITAL.

San Francisco, July 1st, 1898.

To the Honorable the Board of Health

Of the City and County of San Francisco—

Gentlemen: I have the honor to present herewith, for your consideration, the Forty-fifth Annual Report of the City and County Hospital, for the fiscal year 1897-98.

The following summary has been compiled from several statements enclosed herewith, and which form a part of this report:

SUMMARY.

Patients in Hospital July 1st, 1897.....	378
Examined for admission during fiscal year.....	4,440
Rejected	533
Admitted	3,902
Born (not including 10 stillborn).....	121
Total to be accounted for.....	4,401
Patients discharged cured.....	1,501
Improved	584
Unimproved	47
Own request	778
Refused treatment.....	28
Removed by relatives or friends.....	176
Insubordination	52
Referred to Insanity Commissioners.....	17
Sent to Almshouse.....	152
Sent to Pesthouse.....	1
Referred to Mayor.....	5
Ran away.....	112
Attempt to commit theft.....	1
Died during the year.....	564
Patients remaining June 30th, 1898.....	383
Total accounted for.....	4,401

Least number of patients during the year (Sept. 6th, 1897).....	319
Greatest number of patients during the year (Feb. 15th, 1898)..	420
Total number of days' treatment.....	137,877
Daily average of patients.....	377.92
Daily average of officers and employees.....	121.87
Percentage of deaths to results.....	14.00
Percentage of deaths to total number treated.....	12.82
Average time under treatment (days).....	31.33
Cost of subsistence per person per diem.....	\$0.1763
Cost of subsistence per patient per diem.....	0.2330
Total expenses per patient, per diem.....	0.6668
Total amount expended during the fiscal year.....	\$91,390.43
Drugs and provisions furnished Smallpox Hospital.....	2,153.08
Drugs furnished Magdalen Asylum.....	92.95
Actual outlay for current expenses.....	89,144.40
Amount of appropriation for Hospital purposes.....	82,000.00
Amount of appropriation for "special repairs".....	2,500.00
Deficiency met by special appropriation by the Board of Supervisors	6,890.43

The duties of Superintendent Physician were assumed by me November 1st, 1898, after the resignation of Dr. S. P. Tuggle, who for a brief period succeeded Dr. J. M. Williamson in the administration of the affairs of this Hospital.

The Annual Report for the fiscal year 1896-97, by the last named gentleman, gives in detail the difficulties of the situation during his term of office, and ably shows the disgraceful state of the Hospital buildings, and mismanagement existing at the time he took matters in hand.

It is, therefore, unnecessary for me to go over that ground, especially since there was no large repair fund appropriated during the past year, to tempt the cupidity of rapacious contractors, "et als."

I have, therefore, been fortunate in not having had the disagreeable task of discovering similar acts of fraud and dishonesty in addition to other exacting duties.

Previous reports to your honorable body, regarding the unsanitary, dilapidated, and all-round disgraceful condition of the Hospital buildings have been elaborate in detail and graphic in description.

I do not think it possible to describe these conditions

more clearly, except to say that what was outrageously bad when your last report was received, is worse now.

The recent action of the Mayor and Board of Supervisors with regard to the building of a new and modern Hospital for the City and County of San Francisco, shows that the earnest efforts of your honorable body in the interest of humanity, have not been in vain, and it is to be hoped that all public-spirited citizens will aid you in urging upon the present honorable Board of Supervisors, and their successors, the necessity for speedy action in the premises, so that the least possible delay may be had in the erection and completion for occupancy of a great charity hospital for this city and county, worthy of a cultured, enlightened, and wealthy community.

Passing at present from considerations of the necessity for a new Hospital, and especially from the nauseating condition of the present buildings, I beg briefly to ask your attention to matters affecting the administration of the affairs of the institution, and the work accomplished in its different departments.

A few suggestions may also be ventured, which seem to me to be in the interest of good policy.

In the monthly reports rendered for the past eight months, matters of immediate interest were offered for consideration, together with minor details, as noted in journal.

These events I will not attempt to review, being on record for reference and information.

In the administration of your institution, it has been my endeavor to carry out, as far as lay in my power, the two chief objects of a charity hospital: First, the humane care and skillful medical treatment of the indigent sick; and second, the advancement of the science and art of medicine.

It has also been my endeavor to economize the expenditures of the Hospital appropriation, consistent with these objects.

The difficulties in the way of accomplishment of these ends are many. They have been the despair of all past ad-

ministrations, and are likely to continue to a more or less extent in the future, unless a more enlightened system of laws, State and municipal, are passed to govern this charity.

In regard to this subject, I would refer to the succinct and authoritative observations made in the Superintendent Physician's report of 1896-97.

My experience corroborates that statement in all particulars, for no one can properly conduct the affairs of so large an institution without full and unquestioned power in the premises.

One of my earliest experiences upon assuming office was the antagonistic attitude of a certain number of the medical staff, and almost every other officer and employee, to the ordinary rules requiring discipline and attention to duty. The Hospital was regarded as a huge joke, to be used only for personal privileges or political purposes.

Its reputation in the past had something to do with this, in which the public joined, but aside from that, it is hard to understand why the care of the indigent sick should be a theme for joking or that these patients should suffer from neglect or indifferent treatment.

It is one of the highest attributes of civilization to afford systemized care, humane and skillful medical treatment to the sick poor, and under proper conduct, such a great charity as this, should compel the respect of all thinking people and elicit their generous financial support.

I think I can truthfully state that this Hospital is the only place in this great city where patients are treated without having to pay a cent. There are not more than fifty-free beds altogether in San Francisco for those unable to pay, outside this Hospital.

With a view, therefore, of conducting this institution for Hospital purposes, it has been my endeavor to see that the supply of articles of subsistence was of the best quality.

I believe that good nourishing food is particularly necessary and very essential for this class of patients. Com-

fortable beds, warmth and cleanliness are equally important.

The bedding up to January last was worn out and threadbare. In response to an appeal to your honorable board, I am glad to state that the honorable Board of Supervisors responded promptly to the urgent necessity of the occasion, and relieved much suffering by supplying in part, the need for blankets, comports, and spreads.

The supply of steam for warmth, hot water, and laundry purposes, has for years been inadequate, but during the month of February, the old steam boiler, which had been in use for years, exploded, as had often been predicted. In its stead a new one was placed in position last March, which supplies all requirements.

The supply of illuminating gas up to the early part of 1898, was insufficient and poor; but, without cost to the city and county, an additional gas main, discovered running through the Hospital grounds, was, by permission of the proper authority, tapped, and old gas pipe on hand fitted, so that sufficient pressure and flow was obtained to give good light throughout the Hospital.

The General Operating Room, which for years has fallen short of common requirements, has been improved in two ways. Formerly the gaslight was so poor that when a surgical operation became necessary at night, light had to be obtained from three or four coal oil lanterns, held by attendants. On May 22d a drop-light chandelier, holding four Welsbach burners, was hung in position, which gives satisfactory illumination for such purposes.

A new and large steam sterilizer has been added. Heretofore, there was no way to properly heat this room for surgical purposes. Two steam radiators were put in, which now fulfill that requirement.

The improvement of the grounds, begun by my predecessor, has been followed up. Through the courtesy of Sheriff Whelan, convicts were detailed to cut down a number of trees, and top others that obstructed air and sunshine from

the wards. The trees were cut into cordwood, which was a saving of considerable coal. The flowers have been carefully cultivated and another large plat added. This feature is of much benefit to the patients, and helps to divert attention from the cheerless and somber aspect of the buildings.

It is deplorable that, for lack of means, many repairs and a few requisite improvements could not be made.

Looking to the necessity of immediate improvements. I ask your attention to the need of a ward for the isolation of infectious and contagious diseases, especially of children.

Another matter that should be acted upon as soon as possible, refers to the wards of this Hospital. It is almost criminal to admit patients to them, saturated as they are by the emanations of disease for the past twenty-five years. This deleterious influence extends also to the medical staff and nurses, several of whom have contracted pulmonary diseases and typhoid fever from this cause.

In view, therefore, of the probable delay in the completion of the new Hospital, I would respectfully recommend that a system of disinfection be instituted for the interior of all wards, closing for a week at a time of two wards, and thoroughly as possible purifying them by means of formalin, or formaldehyde vapor, or by such other means as may seem most efficient by your honorable board and under inspection of your Health Department. The wards could then be calso-mined at but little expense by employees of the Hospital.

By reference to Summary Table, placed at the beginning of this report, it will be noticed that the daily average of patients is larger than for several years.

These figures, however, do not fully account for all the patients supplied with subsistence, medicines, surgical dressings, etc., by the Hospital.

It is generally overlooked, or forgotten by the authorities, that about thirty inmates of the Twenty-sixth Street Hospital, or Pesthouse, are furnished with subsistence, medical and surgical supplies, whiskey, etc., from requisitions drawn

on this Hospital and paid for out of its annual appropriations.

The Magdalen Asylum is also supplied by this Hospital with medicines, etc., as required. These two institutions cost quite a good sum.

With respect to the Twenty-sixth Street Hospital, I would suggest that it might be good policy to recommend that the honorable Board of Supervisors grant that institution a separate and distinct appropriation. The Steward's report on this point is referred to.

The inmates of the Pesthouse, together with the average of one hundred and seventy-two outclinic patients treated here might, I think, be fairly counted in the total number of patients to be accounted for in the estimate for a yearly appropriation.

It will be noticed that the Hospital statistics are unusually full and complete; this is especially so in regard to the "Classification of Diseases" and "Causes of Death," as instituted by your honorable board.

This is a marked improvement, and an educational advance over older methods.

A further study of these statistics will show that this Hospital affords one of the largest and most varied fields for the clinical study of diseases in this country. It offers an unsurpassed opportunity for the earnest student to equip himself by practical experience, under the direction of learned instructors, for the successful practice of his profession, and I am one who believes that only those who appreciate these splendid advantages should be allowed the privileges of being an interne to this Hospital. The diploma issued by your honorable body to house physicians and surgeons should be an assurance of the highest of post-graduate honors, and be esteemed as such everywhere.

The San Francisco Training School for nurses of the City and County Hospital continues to be of service, and is be-

coming more thorough in its system of instruction and training.

Looking to a more complete system of training, I offer the suggestion that the term of service be extended to three years.

It certainly takes two years of training for efficiency, and the third should be given for the benefit of the Hospital.

I ask also your attention to the fact that application has been made by graduate nurses from other hospitals for a course of training in this Hospital. This suggests the advisability of the establishment of a past graduate course for nurses. A four months' training course would probably be enough, for which privilege a fee might be charged, sufficient to pay for board and graduation expenses.

The money so collected could be used for augmenting the education facilities of the school.

In conclusion, let me say that, while my entire time has been devoted to this Hospital, I have not been able, in eight months, to establish perfect discipline, or work moral regeneration in an institution which has been known principally in the past by its irregularities.

A crusade of education, firmness of purpose, and constant vigilance have been the methods used to attain a better state of affairs, and I am pleased to state that some little advance has been made in that direction.

Respectfully submitted,

G. E. SUSSDORFF, M. D.,
Superintendent Physician.

REPORT OF HOSPITAL STEWARD.

San Francisco, July 1st, 1898.

G. E. Sussdorff, M. D., Superintendent Physician—

DEAR SIR: The annual statement of expenses and averages of the Steward's Department of the City and County Hospital, herewith submitted, does not take into consideration the maintenance during the year of thirty persons at the Twenty-sixth Street Hospital, or Pesthouse. This cost our institution \$2,153.08—quite an item considering the meagerness of our appropriation.

I would recommend in this connection that efforts be made to have an appropriation made directly to the Pesthouse each year, and that that hospital buy its own supplies through requisition. This would be a more convenient plan for both institutions. Even the books of the Pesthouse are kept at this hospital.

The year just past has seen the usual struggle under the handicap of improper appliances and general dilapidation. Despite all these, many improvements have been made at little cost, much to the betterment of the hospital.

I would again urge that every effort be put forth to establish a proper scale of wages for employees, and that this matter be considered when the next appropriation is made. Especially is it necessary that the corps of ward tenders receive adequate wages instead of the paltry \$5 each a month now paid them. As you well know, patients cannot be made to work, and efficient service cannot be secured from men who are paid a mere pittance, neither is it just to expect men to work for such a small return.

Every effort has been made by this department to keep the supplies up to a proper standard, and the coming year will see these efforts maintained.

Respectfully,

PAUL EDWARDS,

Steward.

REPORT OF THE MATRON.

San Francisco, July 1st, 1898.

G. E. Sussdorff, M. D., Superintendent Physician—

DEAR SIR: In submitting to you my yearly report, I desire to call your attention to the unusually large amount of sewing being turned out of my department, and request that I be relieved of such work as the making of mattresses, and that the same be relegated to the mattress maker's department; also, the great need of some motive power being placed in my department to facilitate our work.

The constant disregard to the rule that "bed patients" only be furnished with garments demands that a cheap gingham shirt be provided for the convalescent patients (averaging one hundred and twenty-five), thereby obviating the loss and mutilation of nightshirts appropriated only for wear of patients confined to bed.

The thanks of this hospital is due Mrs. Hooper, of the Occidental Hotel, for old linen, a much needed article; to Mr. W. H. Cross, 626 Polk street, and to the ladies of the First Baptist Church, for frequent donations. Also, to the ladies of the California Woman's Club for interest and promise of future aid.

Respectfully submitted,

MARY E. BLACK, Matron.

REPORT OF SAN FRANCISCO TRAINING SCHOOL FOR NURSES.

San Francisco, July 1st, 1898.

G. E. Sussdorff, M. D., Superintendent Physician—

Dear Sir: I beg to submit herewith the report of the San Francisco Training School for Nurses for the fiscal year ending June 30th, 1898:

The Training School commenced its seventh year (July 1st, 1897) with the following staff of nurses:

Graduate Nurses.....	1
Senior Puppl Nurses.....	13
Junior Puppl Nurses.....	11
Male pupils.....	1
Probationers	2
Total.....	28

The demands of the Hospital require a larger number than this, which the limited capacity of the nurses' quarters makes it impossible to meet.

The number of nurses during the year has varied but little. The names of five pupil nurses have been dropped from the rolls.

Twenty-five probationers have been admitted into the School; four were dropped at the end of probationary period.

Thirteen nurses have been graduated. One of the past year graduates, Miss Nickson of Chicago, remains (without salary) to take charge of the women's medical department, and is doing excellent work for the Hospital and School.

The satisfactory conduct of the women's medical and

general operating room shows the advantage of having graduate nurses in charge of departments and one to act as Night Superintendent of Nurses.

A larger staff of nurses would also allow of a visiting nurse to obstetrical and other patients amongst the poor who are not able to pay for the services of a trained nurse and prefer not coming to the Hospital. The benefits derived would be very great for this particular class. The nurse would be able to advise and instruct as to preparation of food, applications, baths, and general care in filling the orders left by the physician. There is indeed a wide field for such mission work.

Eighty-nine patients have been furnished with special night and day nurses for various periods. It has been found impossible to assign special nurses in all cases requiring them.

The usual work of the year has been carried on in a satisfactory manner by lectures, teaching in class, and lessons in massage and cooking.

The work of the nurses in the wards and lecture room has been well done and they have shown themselves attentive and studious—an *esprit de corps* existing effectually raising the standard of their work.

All pupils have spent on an average six hours weekly attendance in class and lecture. Miss Edna Davies has given twenty-four lessons in cooking to a class of twenty-two nurses. These lessons have been most thorough, have covered a very liberal course and have been much appreciated by the nurses, and in their private family work will be to them of incalculable value.

Necessary changes of schedule for meals and hours of duty that would add to the comfort and welfare of the nurses cannot be effected in our present environment.

It is my sad duty to record the death of pupil nurse William Hawkins, which occurred November 10th, 1897, after an illness of two weeks, contracted whilst nursing at the Pest-

house a patient supposed to be suffering from typhus fever. We wish to bear witness to his faithful and conscientious performance of duty, and our conviction that his life was sacrificed not only to duty but also to the barbarous provision afforded by the city for the care of patients suffering at the City and County Hospital with contagious diseases [wines, stimulants, etc., that could not be furnished by the Hospital were contributed by Hon. James D. Phelan and others]—conditions but slightly mitigated when caring for Mr. Hawkins during his fatal illness at the City and County Hospital. It would no doubt be most gratifying to the citizens of San Francisco would the Supervisors appropriate a small sum of money to fittingly mark the grave of this loyal and devoted nurse. The heroic nurses, Miss O'Reilly and Miss McLean, the physicians in attendance, Dr. F. W. Dudley and Dr. McLean, for their constant care and attendance to Mr. Hawkins, have our gratitude and admiration.

It is apparent that the term of instruction (two years) does not allow time or opportunity for routine or administrative work and taxes the time and strength of pupil nurses severely. I would suggest that all pupils entering during the coming year sign for a three years' course. The leading hospitals of the East having adopted the three years' course report favorably of the experiment, which system has always been a success in the hospitals abroad.

An additional number of graduates should be retained as head nurses of the following departments, Maternity and Nursery, Women's Surgical, Men's Medical and Night Superintendent, to be selected for executive ability, exercise of discipline and careful teaching of their assistant nurses, obviating the constant changing of charge-nurses and dividing the responsibility that now exists under the present system of departments being placed in charge of pupil nurses subject to frequent change necessary to allow pupil nurses an equal length of time for experience in each of the various wards of the Hospital during their service of two years.

The exceedingly crowded condition of the nurses' quarters leads me to again ask for the erection of a dormitory apart from the Hospital, the basement of such a building to be fitted up as a gymnasium for the nurses. Physical education as the recognition and merits of this branch of education are now neglected for lack of accommodations.

The Training School has been largely indebted to the help, advice and support of the physicians of the staff and the cordial and helpful co-operation of the Superintendent and Resident Physicians.

Respectfully,

MARY PATTON,

Chief Nurse and Principal of the Training School.

LIST OF GRADUATES.

GRADUATES—1892-93.

Archibald, Alice, Private Nurse, San Francisco.
 Coffield, Mary, Private Nurse, San Francisco.
 Hanson, Kate, Private Nurse, San Francisco.
 McGovern, Katherine L., Private Nurse, San Francisco.
 Robinson, Robin M., Private Nurse, San Francisco.
 Waterman, Adelaide M., Private Nurse, San Francisco.

GRADUATES—1894-95.

Espeset, Belle S., Private Nurse, San Francisco.
 Whicher, M. Louise, Librarian Public Library, San Francisco.

GRADUATES—1895-96.

Buchler, Lillie C., Private Nurse, San Diego.
 Covert, Nellie D., Private Nurse, San Francisco.
 Gibbel, Fannie B., Private Nurse.
 Gray, Annie Irving, Private Nurse, New York, N. Y.
 Mead, Mary E., School Department, San Francisco.
 Parry, Frances A., Private Nurse.
 Ranson Jennie, Private Nurse, San Francisco.
 Ryan, Hattie D., Private Nurse, Denver, Col.
 Reed, Elizabeth A., Private Nurse, San Francisco.
 Wood, Adeleine M., Portland Oregon.
 Walker, E. Maud.

POST-GRADUATE—1895-96.

Hulda E. Graves, Private Nurse, Victoria, B. C.

GRADUATES—1896-97.

Beasley, Mary L., Matron County Hospital, Santa Rosa.
 McAfee, Mary S., Private Nurse, San Francisco.
 Kane, Julia M., City and County Hospital, San Francisco.
 Nelson, Jessie R., Private Nurse, San Francisco.
 Thompson, Eugenie, Private Nurse, San Francisco.
 Young, Lena G., Private Nurse, San Francisco.
 Young, Mattie, Private Nurse, San Francisco.

GRADUATES—1897-98.

Cathcart, Josephine, Home, Pomona, Cal.
 Gracler, Jennie, Private Nurse, San Francisco.
 Howard, Carrie, Private Nurse, San Jose.
 Hayden, Elsie S., Private Nurse, San Francisco.

Karstens, Otlie, Private Nurse, San Francisco.
 Lampkin, Bertha, Private Nurse, San Jose.
 McLean, Eliza, Private Nurse, San Francisco.
 Nickson, Jane P., City and County Hospital, San Francisco.
 O'Reilly, Mary, Private Nurse, San Francisco.
 Roney, Margaret, Private Nurse, San Francisco.
 Rist, Ella, Private Nurse, San Francisco.
 Strand, Mary F., Soldiers' Home, Los Angeles County, Cal.
 Tierney, Ellen, Private Nurse, San Francisco.

COURSE OF LECTURES, 1897-98.

DR. WM. WATT KERR.

1. Pneumonia.
2. Hygiene.
3. Ventilation.
4. Ventilation.
5. House Drainage.
6. Disinfectants.
7. Disinfectants.
8. Nursing Febrile Cases.
9. Bath and Diet.

SURGERY—DR. G. FRANKLIN SHIELDS.

(Wednesday—8 p. m.)

1. Cell Life: Healing of Wounds.
2. Principles and Practice of Aseptic and Antiseptic Surgery.
3. Dressings and Their Disinfectants; Their Methods of Preparation and Use.
4. Surgical Instruments (Care of).

SURGERY—DR. EMMET RIXFORD.

(Friday—11 p. m.)

1. Anesthetics: Their Administration and Effects.
2. Care of Patient Before, During and After Operation.
3. Methods of Sterilization.
4. Preparation of Irrigating Fluids.

GYNECOLOGY—DR. C. A. VON HOFFMAN.

(Thursday—10 a. m.)

1. Gynecological Instruments. Preparing Patients for Examination. Preparation for Operations and Aftercare.

ABDOMINAL SURGERY—DR. C. A. VON HOFFMAN.

1. Technique to be Observed by Nurses. Post-Operative Care of Abdominal Cases.

EYE, EAR AND THROAT—DR. LAGAN.

(Friday—4 p. m.)

OBSTETRICS—DR. JAMES F. McCONE.

(Saturday—4 p. m.)

1. Pregnancy. Impregnation.
2. Parturition. Natural Labor.
3. The Puerperal State. Aftercare.
4. Care of Infant in Health and Disease.

DISEASES OF THE SKIN—DR. W. G. HAY.

(Tuesday—4 p. m.)

1. Anatomy and Care of the Skin.
2. Nursing in Diseases of the Skin.

THE URINE—DR. L. BAZET.

1. Elementary Analysis of Urine.
2. Tests With Practical Work.
3. Nursing in Diseases of Urinary Organs.

PHYSIOLOGY—DR. W. W. WYMORE.

(Monday—4 p. m.)

1. Phenomena of Life: Structure of Elementary Tissues.
2. Blood: Its Circulation.
3. Respiration.
4. Food and Diet. Digestion.
5. Absorption. Animal Heat, Skin and Kidneys.
6. Vascular Glands. Muscular System.
7. Voice. Speech. Cerebro-Spinal Nervous System.
8. Cranial Nerves. Senses.
9. Sympathetic Nervous System.
10. Reproductive Organs. Development.
11. Development (continued).
12. Relation of Life to Other Forces. Chemical Basis of Human Body.

TRAINING SCHOOL REPORT.

MATERIA MEDICA—DR. MEYER.

(Wednesday—8 p. m.)

1. Medicines and Their Methods of Administration. Dosage, Weights, and Measures. Terms and Preparations.
2. Classification of Drugs. Cathartics, Emetics, Stimulants, Hypnotics, Sedatives, etc.
3. Drugs Acting on Respiratory, Circulatory and Excretory Systems; and Physiological Action in Each.
4. Poisons. Symptoms and Antidotes.

ANATOMY—DR. S. J. FRASER.

(Friday—8 p. m.)

1. Anatomy Proper: The Cell.
2. Bone: Development and Classification.
3. Bones of Skull.
4. Bones of Trunk.
5. Bones of Upper and Lower Extremities.
6. Joints.
7. Muscles.
8. Arteries and Veins: Lymphatics.
9. Brain and Spinal Cord.
10. Heart and Lungs.
11. Organs of Digestion.
12. Pelvic Organs.
13. Landmarks.

GENERAL MEDICINE—DR. H. C. MOFFITT.

1. Anatomy of Nervous System.
2. Physiology of the Nervous System.
3. Nursing in Diseases of Nervous System.
4. The Care of the Nervous and Insane.

MASSAGE—DR. HEDWIG MALMESTROM.

(Tuesday—4 p. m.)

1. History—In Hands of Masseuse; in Hands of Nurse. Demonstration in Hand and Arm.
2. Effect on Digestion. Demonstration on Chest and Abdomen.
3. Demonstration on Foot and Leg.
4. Thigh. Passive Movements.
5. Massage of Head. Soporific Effect. How Obtained.

6. Demonstration on Back. Back and Gluteal Regions. Resistive Movements.

7. Sprains; Dislocations; Indurations; Paralysis; Percussion; Position; Use of Oils.

DIETETICS—MISS E. DAVIES.

(Tuesday—3 p. m.)

1. Introductory.
2. Elementary Composition of Food. Food Classification.
3. Water. Uses in Human Body. Purity of Water. Variety of Drinking Water.
4. Water (continued). Experiments.
5. Force-Producing Value of Foods.

10. Special Diet for Certain Diseases.
11. Special Diet for Certain Diseases (continued).
12. Invalid Desserts.

THE FOUNDING OF THE TRAINING SCHOOL FOR NURSES.

The San Francisco Training School for Nurses was established in August, 1891, this being the first effort to bring the trained skill of the Eastern schools to bear upon the amelioration of the dependent afflicted in this Western metropolis. Briefly stated, during the previous year Mrs. J. G. Lemmon of Oakland was cared for through a severe illness, and her life no doubt saved through the skillful services of Miss Ida M. Forsyth, a graduate nurse from the famous Blockley Hospital of Philadelphia. Grateful for her own recovery, her solicitude for the welfare of others became greatly enhanced; and with her, desiring and doing are coincident as a general rule. Consulting with Miss Forsyth, it was decided to visit the City and County Hospital of San Francisco, this being the largest institution of its kind on the Pacific Slope, and one that would afford the best opportunities for clinical instruction and experience. The Superintendent Physician, Dr. C. S. Healy, welcomed these earnest women cordially and the subject was laid before him. Though evidently appreciating to the full the value of special and thorough training to prepare nurses for the proper care of invalids, he at first thought such a school would not be feasible in the City and County Hospital, because of the lack of suitable rooms for their accommodation and funds to carry on the work. During a subsequent interview, however, when Mrs. Lemmon introduced Miss Forsyth, it was discovered that the importance of instituting a training school in the Hospital had grown in the Superintendent Physician's estimation—for he had already applied to the Board of Health and the Board of Supervisors for their approval and assistance. The Superintendent Physician found that a majority of the Board of Health (not in-

cluding Mayor Sanderson, who was heartily in accord with the project from the first) were still undecided upon this innovation. They cited in objection the impropriety of placing young women in a hospital of mixed patients, the want of proper rooms, and lack of funds. Perhaps the chief objection, though unstated, was reluctance on the part of the Board to remove from the Hospital wards the old-time nurses who, though inefficient, and some of them often intoxicated, were nevertheless persons of influence in political circles. The objectors were called upon again and again, and the various objections were gradually overcome, particularly that of placing young women in such positions, this being clearly demonstrated as having already passed the stage of experiment and become an unbounded success in similar institutions in the East. About this time Dr. Healy, the Superintendent Physician, had found rooms in a wing of the Hospital that might perhaps be made available for living quarters. He invited inspection of them, and they were pronounced suitable. These rooms, the same now occupied by the Training School, were then used in part by certain employees of the Hospital, and it was not without loud protest that they were transferred to other quarters.

The rooms were devoid of furnishings of any kind, and Mrs. Lemmon, often accompanied by Miss Forsyth, set about soliciting aid from her friends and citizens of San Francisco, who responded generously, and these persevering women were finally successful in procuring various articles for furnishing the rooms with some degree of comfort. A careful account of all articles and money so contributed was kept and the names of the donors preserved. No sooner was the School in active operation than it was discovered that its establishment was a decided measure of economy. Heretofore the patients had been committed to the care of untrained nurses, employed at wages of from \$20 to \$75 per month, while the pupils of the Training School receive the nominal sum of \$10 per month after having given three

months free service—a large saving in favor of the Training School.

The work of the School, within a few months after its inauguration, with even the small number of young women under the careful supervision of Miss Forsyth and her assistant, Miss Elise K. Mohl, eventuated in great improvement throughout the Hospital. Neatly attired nurses were constantly on duty in the various wards, and where formerly the medicines were kept on the table at the bedside of the patients, who helped themselves at will, the drugs were placed in closets under lock and key, to be carefully measured and administered in the exact doses prescribed by the physicians. Neat charts were also seen at the heads of the beds, where the nurses kept record of temperature, respiration, and pulse—an indispensable requisite in the treatment of many diseases, especially fevers. The surgeons were also quick to appreciate the careful and intelligent preparation of patients for operations, and watchful care during the critical hours following. One of the leading physicians remarked that before the advent of the Training School he often found it difficult to distinguish between a nurse and patient, as patients were often trying to nurse each other.

In the year 1891 twelve nurses only were enrolled. In 1893-94 the number averaged sixteen. This number was recognized by the Board of Health as entirely inadequate for the work of the Hospital. Up to 1895 no appropriation had been made to meet the expense of a larger force of nurses, although the Board of Health in office at that time was very willing to increase the nursing staff, but had no funds on hand for such purpose. In October, 1895, and April, 1896, two musicales were given at the Occidental Hotel under the auspices of the leading society women of San Francisco, the proceeds (\$217.00) to be utilized for dormitory furnishings. This enabled us to accommodate nine more pupils, increasing the number of pupil nurses from nineteen to twenty-eight. The names of the patron-

esses and artists who so generously gave their time and interest will be found appended hereto.

With the increased number of nurses the advantages to the patients are many; the relief to the nurses scarcely perceptible. The night force was increased from three to six, and frequently eight. A senior nurse is detailed as Night Superintendent of Nurses, directing the work and seeing that all emergencies arising during the night are properly met.

Critical medical and surgical cases, demanding extra care, are furnished with special nurses—an arrangement impossible when the school numbered but nineteen pupils, the custom then being to strap or tie down delirious pneumonia and typhoid patients.

DONATIONS TO THE TRAINING SCHOOL.

NAME.	DONATION.
AUGUST, 1891.	
Mrs. O'Sullivan.....	One chair.

REPORT OF CITY AND COUNTY ALMS HOUSE.

San Francisco, July 1st, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I respectfully submit to your honorable Board the following report of the City and County Alms House for the fiscal year ending June 30th, 1898:

NUMBER OF INMATES ADMITTED.

Males	567
Females	119
	<hr/>
Total admitted	686
Remaining in the house July 1st, 1897.....	921
	<hr/>
Total to be accounted for.....	1,607

NUMBER OF INMATES DISCHARGED.

Number of inmates discharged at own request.....	300
Number of inmates ran away.....	53
Number of inmates discharged for cause.....	122
Number of inmates died.....	142
Remaining in the house July 1st, 1898.....	990
	<hr/>
Total.....	1,607
Daily average of inmates.....	961

CITY AND COUNTY ALMS HOUSE REPORT. 471

The appropriation for the City and County Almshouse for the	
fiscal year 1897-98 was.....	\$77,500.00
Expenditures during the year.....	76,866.49
<hr/>	
Balance unexpended.....	\$633.51
Amount turned over to the Treasurer from sale of junk, hogs, etc.	791.25
<hr/>	
Total balance unexpended.....	\$1,424.76
<hr/>	
Which being deducted from.....	\$77,500.00
	1,424.76
<hr/>	
Actual total cost to City for 1897-98.....	\$76,075.24
Daily average number of officers, employees and inmates.....	992
Daily cost of food per officer, employee and inmate.....	.08 86-100c
Total cost of dry goods, clothing, bedding, shoes, etc.....	\$3,211.65
Daily average number of inmates.....	961
Daily cost per inmate of above articles.....	.09 16-100c
According to our books the total amount paid out for 1897-98 was..	\$76,866.49
Less amount turned into Treasury from sale of junk, etc.....	791.25
<hr/>	
Total cost to city for 1897-98.....	\$76,075.24
<hr/>	
Daily cost of institution.....	\$208.42
Yearly cost per inmate.....	79.17c
Daily cost per inmate.....	.21 9-10c
<hr/>	
Received from the sales of junk, bones, rags, etc.....	\$ 95.25
Hogs (15,627 pounds).....	676.00
One cow	20.00
<hr/>	
Total turned over to City and County Treasurer.....	\$791.25
Effects of deceased inmates turned over to City and County	
Treasurer	89.10

All vegetables consumed by the inmates were grown on the grounds this year, and the thirty acres growing in potatoes look very promising for a dry year.

About thirty tons of hay have been harvested from the grounds and saved in good condition.

Thirty cords of wood have been cut from the tree tops on the road.

The Board of Health have selected nine acres of land for the New City and County Hospital, and the same has been surveyed by the County Surveyor.

Water is still furnished an adjoining milk ranch, for

which we receive as compensation one can milk per day, valued at fifty cents.

The doctors and ambulance drivers from the Park Receiving Hospital have been boarded here during the year. The monthly entertainments for the amusement of the inmates have been kept up, and thanks are due to the many who have contributed time and talent to them.

We desire to return thanks to Mrs. Phoebe Hearst for the present of a handsome piano to our institution.

Dr. Pischl has continued his regular visits and given his gratuitous services as oculist to the inmates. The clergy of St. Dominic's and St. James' parishes, the Rev. D. O. Kelly, the Rev. W. H. Tubb, the Salvation Army, the Catholic Ladies' Aid Society, the German Ladies' Benevolent Society and the French Ladies' Aid Society have made regular visits and administered to many of the inmates in one way or another, to all of whom we desire to return thanks. During the past year the want of means has prevented many much needed improvements and repairs, and while the whole of No. 1 building needs new flooring, I was only able to newly floor a portion of the main hall, a part of the main stairway and the office. The roof of the new building needs new skylights and many other repairs. The old latrine having become a nuisance in reality as well as in appearance, has been replaced by a new one, with all modern improvements. I also found it necessary to lay 1,800 feet of new pipe to guard against fire. I desire to return thanks to the honorable Board of Fire Commissioners for the fine fire engine. I found it necessary to shelter the new fire engine in the new concrete house which has been built for that purpose. The cost of the new round-house or latrine was \$1,609.62; the cost of the new fire engine house, the new pipes, etc., was \$1,924.86. I am indebted to Chief Sullivan and Assistant Dougherty for many valuable suggestions in connection with the management of the fire engine.

Thanking the honorable Board of Health and the honorable Board of Supervisors for their kind support and cooperation, I respectfully submit this report.

E. A. REDDY,
Superintendent.

STATISTICS.

ALMSHOUSE EXPENSES FOR 1897-98.

Salaries of officers and employees.....	\$20,249.20
Provisions, groceries, fruit, etc.....	32,080.16

No. 4 building, grounds and road.....	2 acres

 UNDER CULTIVATION.

Potatoes	30 acres
Hay	9 acres
Pasturage	8 acres
Vegetables	15 acres
Waste lands	2 acres
Total.....	80 acres

 LIVE STOCK.

Horses	14
Cows	2
Calves	5
Hogs, large	50
Hogs, small	30
Chickens	60

REPORT OF MEDICAL DEPARTMENT OF THE CITY
AND COUNTY ALMS HOUSE.

San Francisco, July 1st, 1898.

*To the Honorable the Board of Health
Of the City and County of San Francisco—*

GENTLEMEN: I hereby present to your honorable board the yearly report of the Medical Department of the City and County Almshouse for the fiscal year ending June 30th, 1898:

Number of inmates July 1st, 1897.....	921
Average number of inmates.....	961
Number of deaths during year.....	142
Number of cases treated during year.....	4,432
Number of prescriptions.....	8,203
Cost of drugs, alcohol, liquors, surgical supplies, etc..	\$1,487.06
Remaining in house July 1st, 1898.....	990

NATIVITY OF DECEASED PERSONS.

Austria	2	Italy	1
Azores Islands	1	Norway	3
Belgium	1	Poland	1
China	1	Portugal	1
Canada.....	3	Scotland	2
East Indies	1	Sweden	4
England	10	Turkey.....	1
Finland	2	United States	30
France	11	Unknown	1
Germany	17		
Ireland	49	Total.....	142

CAUSES OF DEATH.

DISEASES.	MALE.	FEMALE.	TOTAL.
CLASS A—GENERAL DISEASES			
SEPTIC—			
Septicemia (due to anthrax).....	1	1
CONSTITUTIONAL—			
Epithelioma of pharynx and larynx.....	2	1	3
Rheumatism.....	2	2
Sarcoma of breast and liver.....	1	1	2
Tuberculosis pulmonalis.....	9	2	11
DEVELOPMENTAL—			
Senility.....	37	7	44
CLASS B—LOCAL DISEASES.			
NERVOUS SYSTEM—			
Apoplexy, cerebral.....	2	1	3
Brain, softening of.....	21	1	22
Epilepsy.....	2	2
Meningitis, cerebral.....	1	1
Paralysis, spinal.....	4	4
Paralysis, general.....	2	2
CIRCULATORY SYSTEM—			
Heart, valvular disease of.....	10	1	11
Heart, fatty.....	2	2
Heart, dilatation of.....	12	1	13
RESPIRATORY SYSTEM—			
Bronchitis, chronic.....	2	2

CAUSES OF DEATH—CONTINUED.

DISEASES.	MALE.	FEMALE.	TOTAL.
RESIRATORY SYSTEM—Continued—			
Bronchitis and asthma.....	1	1	2
Pneumonia.....	1	1	2
Pleurisy, purulent.....	1	1
DIGESTIVE SYSTEM—			
Enteritis, acute.....	1	1
Liver, cirrhosis of.....	1	1
URINARY SYSTEM—			
Nephritis, chronic.....	6	2	8
CLASS C—VIOLENT DEATHS.			
Coroner's cases (suicides).....	2	2
	121	21	142

TABLE SHOWING AVERAGE NUMBER OF INMATES, TOTAL DEATHS,
DISPENSARY EXPENSES AND PERCENTAGE OF MORTALITY
FOR TWELVE YEARS.

YEAR.	Average Num- ber Inmates.	Deaths	Dispensary Ex- penses	Percentage of Mortality..
1886-87.....	613	110	\$1,881 83	.1794
1887-88.....	625	121	2,652 35	.1936
1888-89.....	687	135	2,108 16	.1965
1889-90.....	750	143	2,090 61	.1907
1890-91.....	736	156	1,924 09	.2106
1891-92.....	748	178	2,382 72	.2380
1892-93.....	752	139	1,591 08	.1848
1893-94.....	782	138	1,485 72	.1764
1894-95.....	824	166	1,439 31	.2014
1895-96.....	847	146	1,459 99	.1724
1896-97.....	912	119	1,118 46	.1305
1897-98.....	961	142	1,487 07	.1478

Respectfully submitted,

W. E. CONLAN, M. D.

Resident Physician.
